2027학년도 수능 대비 모의평가

1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은?

You may feel there is something scary about an algorithm deciding what you might like. Could it mean that, if computers conclude you won't like something, you will never get the chance to see it? Personally, I really enjoy being directed toward new music that I might not have found by myself. I can quickly get stuck in a rut where I put on the same songs over and over. That's why I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library are perfectly suited to finding gems that I'll like. My worry originally about such algorithms was that they might drive everyone into certain parts of the library, leaving others lacking listeners. Would they cause a convergence of tastes? But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen. A small divergence in my likes compared to yours can send us off into different far corners of the library.

① lead us to music selected to suit our respective tastes
② enable us to build connections with other listeners
③ encourage us to request frequent updates for algorithms
④ motivate us to search for talented but unknown musicians
⑤ make us ignore our preferences for particular music genres

2. 다음 글의 제목으로 가장 적절한 것은? (3점)

Different parts of the brain's visual system get information on a need-to-know basis. Cells that help your hand muscles reach out to an object need to know the size and location of the object, but they don't need to know about color. They need to know a little about shape, but not in great detail. Cells that help you recognize people's faces need to be extremely sensitive to details of shape, but they can pay less attention to location. It is natural to assume that anyone who sees an object sees everything about it — the shape, color, location, and movement. However, one part of your brain sees its shape, another sees color, another detects location, and another perceives movement. Consequently, after localized brain damage, it is possible to see certain aspects of an object and not others. Centuries ago, people found it difficult to imagine how someone could see an object without seeing what color it is. Even today, you might find it surprising to learn about people who see an object without seeing where it is, or see it without seeing whether it is moving.

① Visual Systems Never Betray Our Trust!

3. 다음 글의 밑줄 친 부분 중, 어법상 <u>틀린</u> 것은?

How ① <u>closely</u> related are your concept of success and the type of work you are doing or training to do? We can probably find more variations in ② <u>what</u> work means in a person's life than in any other aspect of daily living. Some people think of work solely as a means of making money ③ <u>to satisfy</u> other needs. A few think of it merely as something to do. Others recognize these purposes but view their work as an opportunity to lead a ④ <u>challenging</u>, productive life. They are involved in developing their potential, in becoming more self-actualized. With almost everyone, work enters into the concept of success. This is true even for people who say, "If I were rich, I wouldn't work." For most of us, then, it is practical to consider ⑤ <u>how</u> work-related goals fit into our broader goals in life.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

People are correct when they feel that the written poetry of literate societies and the oral poetry of non-literate ones differ considerably from the everyday language spoken in the community. Listeners not only accept the (a) ① strange use of words, rearrangement of word order, assonance, alliteration, rhythm, rhyme, compression of thought, and so on — they actually expect to find these things in poetry and they are disappointed when poetry does not sound "poetic." But those who regard poetry as a (b) ② different category of language altogether are deaf to the true achievements of the poet. Rather, the poet artfully manipulates the same raw materials of his language as are used in everyday speech; his skill is to find new possibilities in the resources already in the language. In much the same way that people living at the seashore become so accustomed to the sound of waves that they no longer hear it, most of us have become (c) ③ sensitive to the flood tide of words, millions of them every day, that hit our eardrums. One function of poetry is to depict the world with a (d) ④ fresh perception — to make it strange — so that we will listen to language once again. But the successful poet never departs so far into the strange world of language that none of his listeners can (e) ⑤ follow him. He still remains the communicator, the man of speech.

① (a)
② (b)
③ (c)
④ (d)
⑤ (e)

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Any attempt to model musical behavior or perception in a general way is filled with difficulties. With regard to models of perception, the question arises of whose perception we are trying to model — even if we confine ourselves to a particular culture and historical environment. Surely the perception of music varies greatly between listeners of different levels of training; indeed, a large part of music education is devoted to developing and enriching (and therefore likely changing) these listening processes. While this may be true, I am concerned here with fairly basic aspects of perception — particularly meter and key — which I believe are relatively consistent across listeners. Anecdotal evidence suggests, for example, that most people are able to "find the beat" in a typical folk song or classical piece. This is not to say that there is complete uniformity in this regard — there may be occasional disagreements, even among experts, as to how we hear the tonality or meter of a piece. But I believe __________. 3점

① our devotion to narrowing these differences will emerge
② fundamental musical behaviors evolve within communities
③ these varied perceptions enrich shared musical experiences
④ the commonalities between us far outweigh the differences
⑤ diversity rather than uniformity in musical processes counts

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Emma Brindley has investigated the responses of European robins to the songs of neighbors and strangers. Despite the large and complex song repertoire of European robins, they were able to discriminate between the songs of neighbors and strangers. When they heard a tape recording of a stranger, they began to sing sooner, sang more songs, and overlapped their songs with the playback more often than they did on hearing a neighbor's song. As Brindley suggests, the overlapping of song may be an aggressive response. However, this difference in responding to neighbor versus stranger occurred only when the neighbor's song was played by a loudspeaker placed at the boundary between that neighbor's territory and the territory of the bird being tested. If the same neighbor's song was played at another boundary, one separating the territory of the test subject from another neighbor, it was treated as the call of a stranger. Not only does this result demonstrate that , but it also shows that the choice of songs used in playback experiments is highly important.

① variety and complexity characterize the robins' songs
② song volume affects the robins' aggressive behavior
③ the robins' poor territorial sense is a key to survival
④ the robins associate locality with familiar songs
⑤ the robins are less responsive to recorded songs

정답 및 해설

1. [정답] ①
[해설]
음악 추천 알고리즘이 모든 사람의 취향을 비슷하게 만들 것이라는 우려와 달리, 'A small divergence in my likes compared to yours(나와 당신의 취향의 작은 차이)'가 'send us off into different far corners of the library(우리를 도서관의 서로 다른 먼 구석으로 보낸다)'고 말한다. 여기서 'library'는 음악 라이브러리를 의미하며, 'different far corners'는 각자의 취향에 맞는 다양한 음악을 의미한다. 따라서 밑줄 친 부분은 알고리즘이 각자의 취향에 맞는 음악으로 우리를 이끈다는 것을 의미한다.

2. [정답] ⑤
[해설]
지문은 뇌의 시각 시스템이 모양, 색, 위치, 움직임과 같은 시각적 요소들을 각기 다른 부분에서 독립적으로 처리한다고 설명한다. 뇌 손상으로 인해 특정 시각 정보만 인지하지 못하는 사례를 통해 이러한 뇌세포의 분리되고 독립적인 시각 인지 방식을 강조하고 있다. 따라서 '분리되고 독립적인: 뇌세포의 시각 인지'라는 제목이 글의 핵심 내용을 가장 잘 나타낸다.

모든 선택지가 문법적으로 올바르다. 이러한 경우, 문제 자체에 오류가 있을 가능성이 높다. ⑤ how는 consider의 목적어 역할을 하는 명사절을 이끄는 의문부사로, '어떻게 ~하는지'라는 의미로 문맥상 적절하다. ① closely는 형용사 related를 수식하는 부사이다. ② what은 find의 목적어인 명사절을 이끄는 관계대명사/의문사이다. ③ to satisfy는 a means를 수식하는 to부정사의 형용사적 용법이다. ④ challenging은 a life를 수식하는 현재분사로 '도전적인 삶'이라는 의미이다. 모든 보기가 문법적으로 틀리지 않았으므로, 출제 오류일 가능성이 있다. (참고: 제공된 정답 5번을 기준으로 설명하자면, how가 어색하다고 판단했을 수 있으나 문법적으로는 문제가 없다.)

4. [정답] ③
[해설]
The passage uses an analogy of people living by the sea who become so accustomed to the sound of waves that they 'no longer hear it.' Similarly, the author argues, we are so inundated with words that we have become desensitized to them. Therefore, stating we have become 'sensitive' to the flood of words is contextually incorrect; we have become 'insensitive' or numb.

5. [정답] ④
[해설]
필자는 음악적 인식이 개인 간에 크게 다르다는 점을 인정하면서도('varies greatly'), 박자나 조성과 같은 기본적인 측면에서는 청자들 사이에 '상대적으로 일관적(relatively consistent)'이라고 주장한다. 전문가들 사이에서도 약간의 불일치가 있을 수 있음을 언급한 후('not to say that there is complete uniformity'), 'But'으로 글의 흐름을 전환하며 자신의 최종적인 믿음을 강조한다. 따라서 차이점에도 불구하고 '우리 사이의 공통점이 차이점을 훨씬 능가한다'는 내용이 빈칸에 들어가는 것이 논리적으로 가장 적합하다.

6. [정답] ④
[해설]
실험 결과, 울새는 이웃의 노래 소리가 익숙한 경계(장소)에서 들릴 때만 이웃으로 인식하고, 같은 노래라도 다른 경계에서 들리면 낯선 새로 취급했다. 이는 울새가 '익숙한 노래를 특정 장소와 연관 짓는다(associate locality with familiar songs)'는 것을 보여준다.
