

2027학년도 수능 대비 모의평가

1. 다음 글의 주제로 가장 적절한 것은?

Most linguists and local community members agree that education and literacy in the local language are necessary to maintain vitality, or to revitalize a language threatened with endangerment. Some local communities reject this notion, wanting to preserve their oral traditions and to rely solely on them. There is, however, a cost to this decision, as it limits the domains in which the language can be used. Regardless, most regard literacy as essential for local languages. Yet more than half of all languages have no written form, and so a writing system needs to be developed for them in order to use them in education and literacy programs. Basic pedagogical and reference materials are needed, including textbooks, dictionaries, and usable descriptive grammars. Such materials are readily available for languages of wider communication, but not for the majority of local languages. In addition, reading material is needed for literacy as well.

- ① how to learn a local language quickly and efficiently
- ② the most essential step in learning a new local language
- ③ varied training for literacy development in a local language
- ④ the importance of saving local language for preserving a cultural identity
- ⑤ necessity of a writing system and educational materials for local languages

2. 다음 글의 제목으로 가장 적절한 것은? (3점)

Critics of the green movement have complained for decades that calls to make companies clean up their act are anticapitalist. They supposedly violate magical, hidden-hand, free-market mechanisms. But what's actually been hidden are violations of free-market principles, such as those enormous subsidies paid to extractors. Gaping tax breaks have been awarded to the extractive and fossil fuel industries for decades. As Eric Schlosser, journalist and author, wrote in his blistering *Fast Food Nation*, "legislation passed by Congress has played a far more important role in shaping the economic history of the postwar era than any free market forces." What could be less capital-istic than private companies relying on taxpayers to fund the disposal of their product, at the conclusion of one life cycle of a product's use? It's not even only the customer of a product who has been expected to pay: the system has been rigged so that every taxpayer, regardless of whether they are a product's customer, shares in the cost of its disposal. This is an anticapitalist tragedy of the commons if ever there was one.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

A common stock (typically just called a stock) represents a share of ownership in a corporation. It is a security that is a claim on the earnings and assets of the corporation. Issuing stock and selling it to the public is a way for corporations ① to raise funds to finance their activities. The stock market, ② which claims on the earnings of corporations (shares of stock) are traded, is the most widely followed financial market in America. A big swing in the prices of shares ③ is always a big story on the evening news. People often speculate on ④ where the market is heading and get very excited when they can brag about their latest "big killing," but they become depressed when they suffer a big loss. The attention the market receives can probably be best explained by one simple fact: It is a place where people can get rich—or poor—⑤ quickly.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

In the past, employees did exactly what they were (A)instructed / stimulated to do. If they didn't receive clear directions, then nothing got done. In fact, if they received directions that they knew would produce a low-quality product, they carried them out anyway. That was how the management-employee relationship worked. Today, employees are expected to make minute-by-minute decisions related to their work tasks. They are more (B)conservative / independent. The company no longer expects to have to give specific directions for each task or problem. Instead, employees are asked to direct their own work flow and to keep productivity up even when required resources are not (C)available / scarce. They have to learn how to work smarter, make the most of limited time and budgets, and be more productive in their own work environment.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

Switching barriers, or artificially created financial penalties for switching to a competitor's product, can prevent the loss of customers by imposing a significant penalty for switching to a competitor. ① Switching barriers in the mobile phone industry take the form of penalties associated with the early cancelation of a contract. ② Similarly, many airlines now award air miles based on how much travelers paid for their ticket, not how far they're traveling. ③ In its earlier days, IBM was able to keep its control over the mainframe computer market by requiring that all hardware components, such as monitors and printers, be also made by IBM. ④ In so doing, IBM managed to tie its customers into its products, which made switching any part of the computing system to other companies' products inconvenient. ⑤ Another approach to creating switching barriers is to provide customer incentives to sign longer-term contracts, thereby locking out competitors for a longer period of time.

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

At the University of Iowa, students were briefly shown numbers that they had to memorize. Then they were offered the choice of either a fruit salad or a chocolate cake. When the number the students memorized was seven digits long, 63% of them chose the cake. When the number they were asked to remember had just two digits, however, 59% opted for the fruit salad. Our reflective brains know that the fruit salad is better for our health, but our reflexive brains desire that soft, fattening chocolate cake. If the reflective brain is busy figuring something else out — like trying to remember a sevendigit number — then impulse can easily win. On the other hand, if we're not thinking too hard about something else (with only a minor distraction like memorizing two digits), then the reflective system can deny the emotional impulse of the reflexive side.

According to the above experiment, the ____ (A) ____ intellectual load on the brain leads the reflexive side of the brain to become ____ (B) ____ .

- | (A) | (B) | (A) | (B) |
|-------------|----------------|-------------|----------------|
| ① limited | powerful | ② limited | divided |
| ③ varied | passive | ④ increased | dominant |
| ⑤ increased | weakened | | |
