Earth's oceans just hit their hottest temperature ever—it's only going to get worse The world's oceans hit 21.10 degrees Celsius last Saturday, breaking a record set in 2024 By Jackie Flynn Mogensen edited by Claire Cameron Join Our Community of Science Lovers! Average ocean temperatures hit a record 21.10 degrees Celsius (69.98 degrees Fahrenheit) on August 22, according to the European Union's Copernicus Climate Change Service (C3S). That's not as hot as a warm bath, but it is the hottest the world's oceans have been since C3S started keeping records in 1979. "As a climate scientist, this is not surprising to me all," says Zachary Labe, a climate scientist at Climate Central, a climate research nonprofit. "It's consistent with decades of research showing how our climate is changing as the planet warms. And without reductions in the burning of fossil fuels, this warming will only continue."

Over hundreds of thousands of years of dwelling outside, the human organism became precisely adjusted to the characteristics of its grassy environment, so that even today, our senses and our cognition are able to easily and efficiently process the particular features present in natural settings. Our minds are tuned to the frequencies of the organic world. No such evolutionary adjustment has prepared us for the much more recent emergence of the world in which we now spend almost all our time: the built environment, with its sharp lines and unforgiving textures and constant motion. We've set up camp amid the high-rises and highways of our modern surroundings, but our minds are not at ease in this habitat. The mismatch between the stimuli we evolved to process and the sights and sounds that regularly confront our senses has the effect of depleting our limited mental resources. We are left worn-out, fatigued, and prone to distraction, simply as a function of the hours we spend in a setting for which we are biologically ill-equipped.

In order for citizens to participate in the democratic process, they must show interest, act, and assume responsibility. The likelihood that they will (① do) so depends on their ability to see the political framework as their own. Only then can social trust (② be created) and a motivation for long-term investments kindled. Here again, there is nothing specifically nationalistic in this way of thinking; political institutions crave to form long-term political bonding, and for that matter they must create a community that is neither momentary nor meaningless. Open borders and unrestricted immigration are therefore a democratic challenge as much as they are a national (③ one). The major difference between the liberal-democratic and the national conceptions of bordered political communities (④ lies) in the ethos of their formation. While liberal conceptions of membership are grounded in voluntarism, national conceptions of membership rely on history and fate. Individuals are assumed to be born into a nation rather than choose to belong to it. This is not a minor difference. Yet, true voluntarism is enjoyed by only a (⑤ fortunately) few. The thousands of refugees who sail the seas in wobbly boats fleeing their demolished homelands and searching for shelter soon find out that free movement is not for everyone.

On the surface, ceremonies may appear to be a waste of time, empty words said unthinkingly. But they do have a (a) ① deeper meaning. We use these rituals to create a sense of belonging. While the National Anthem is being sung before a baseball game, the crowd and the players are performing as a unit. In the same way, the congregation in a church become one when they sing a hymn or recite a prayer. Ceremonies serve to (b) ② unify the participants in an event. Ceremonies are also used to (c) ③ reinforce the atmosphere of an event. Couples who repeat wedding vows are making a public, solemn statement of their intention to live together permanently. Their decision seems much more significant than an offhand "Let's share an apartment" would be. Similarly, when a president swears in public that he will uphold the Constitution of the United States, the entire country realizes the importance of the job and of his commitment to it. Finally, at a basic level, rituals give people a feeling of control. This function is particularly (d) ④ vague in funerals. We can't prevent the death of a loved one, but we can organize a ceremony to help those grieving cope with loss, death, and tragedy. This ritual makes us feel that we are not entirely at the mercy of natural forces, resulting in a (e) ⑤ calming of internal emotional chaos.

An experience can be a particularly useful tool, but overexposure to something can develop an individual's mental baggage. ① When mental baggage is prevalent it can be difficult to consider any creative direction other than that of the overfamiliar, and it can be arduous to persuade others to explore an alternative path when they also have a preconceived notion of what the product is. ② It is only when things can be thought of differently, without accustomed barriers, that it is plausible to innovate markets. ③ If the problem is not confronted with a 'why attitude', similar to a small child constantly asking questions about something, it is almost impossible to understand and solve. ④ Curious children are aware of what is going on around them and don't usually see themselves as the center of the universe. ⑤ In the event that mental baggage can be broken down through repeated enquiry and probing, it is likely that a delightful and practical proposal can emerge and be accepted broadly.

Humans can choose many of their social partners and leave uncooperative partners if there are better options available. The presence of partner choice creates a market for social partners. In such markets, people choose the best partners they can obtain, given their own value in this market. This perspective has implications for the evolution and development of prosocial behavior because it creates a selection pressure for fairness and cooperation. If you are not receiving a "fair" deal, then you can simply find someone else who will offer that deal. In a biological market, the best way to get a good partner is to be a good partner. As long as there are enough opportunities for reputation building or there are costs for being abandoned, then this will cause an escalation of prosocial behavior, in a process known as "runaway social selection" or "competitive altruism."

In a biological market, the \_\_\_\_ (A) \_\_\_\_ of social partners plays an important role in the evolution of \_\_\_\_ (B) \_\_\_\_ behavior.
