

2027학년도 수능 대비 모의평가

1. 다음 글의 주제로 가장 적절한 것은? (3점)

There is no denying that ageism can sometimes undermine a relationship you are trying to develop. For example, a very young worker at the beginning of their career may meet with a much older person who may be tempted to disregard their expertise and potential effectiveness simply on the grounds of age and assumed inexperience. By contrast, a much older worker, when trying to work with a younger person, may find that they represent a parent figure so strongly that the young person 'puts up the shutters' and refuses to have anything to do with them. There are no easy ways around this. Sometimes it is a question of how 'cases' are allocated within an agency. What is important, however, is that you will need to raise these issues directly and try to talk about the 'blocks' that are being put up, in the hope that by airing them they can gradually be removed, and a trusting relationship established. That will be a challenge to your communication skills admittedly, but until the 'block' is identified it will not be possible to move forward.

*undermine: 약화시키다 **expertise: 전문 지식 ***allocate: 할당하다

- ① limitations of resolving conflicts through communication
- ② the potential for collaboration among different generations
- ③ the need for communication to address the challenges posed by ageism
- ④ the necessity of creating various adaptation programs for new employees
- ⑤ factors that hinder intergenerational communication within an organization

2. 다음 글의 제목으로 가장 적절한 것은?

Researchers conducted an experiment to examine whether chimpanzees could spontaneously combine quantities to obtain a larger reward. Each chimpanzee was shown two separate pairs of plates, each pair holding different numbers of food pieces, and was allowed to choose only one pair. To receive the food, the animal had to select the pair whose combined total was greater than that of the other, rather than simply picking the pair with the most visible pieces in a single plate. The chimpanzees consistently chose the pair with the higher combined sum, even when the individual plates within that pair contained fewer pieces than those in the other pair. This suggests that the animals were not merely comparing single largest amounts but were mentally adding the quantities across two plates before making their choice. Based on these findings, the researchers concluded that chimpanzees possess an inherent capacity to perform basic quantitative summation without any specific training, allowing them to maximize reward by evaluating combined values rather than isolated portions.

- ① Chimpanzees Prefer Familiar Plates Over New Ones
- ② Why Visual Illusions Confuse Animals During Feeding Tests
- ③ Training Methods That Improve Animal Counting Skills
- ④ The Social Hierarchy Behind Food-Sharing Behavior in Primates
- ⑤ Spontaneous Summation: How Chimpanzees Maximize Reward Through Quantity Comparison

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Native people create legends to explain unusual events in their environment. A legend from the Hawaiian island of Kauai explains ① how the naupaka flower got its unusual shape. The flower looks like half a small daisy. The legend says that the marriage of two young lovers on the island ② was opposed by both sets of parents. The parents found the couple together on a beach one day, and ③ to prevent them from being together, one of the families moved to the mountains, separating the young couple forever. As a result, the naupaka flower was separated into two halves; one half moved to the mountains, and the other half ④ staying near the beach. This story is a good example of a legend ⑤ which native people invented to make sense of the world around them.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? (3점)

In order for us to be able to retain valuable pieces of information, our brain has to ① forget in a manner that is both targeted and controlled. Can you recall, for example, your very first day of school? You most likely have one or two noteworthy images in your head, such as putting your crayons and pencils into your pencil case. But that's probably the extent of the ② specifics. Those additional details that are apparently unimportant are actively deleted from your brain the more you go about remembering the situation. The reason for this is that the brain does not consider it ③ valuable to remember all of the details as long as it is able to convey the main message (i.e., your first day of school was great). In fact, studies have shown that the brain actively ④ strengthens regions responsible for insignificant or minor memory content that tends to disturb the main memory. Over time, the minor details vanish more and more, though this in turn serves to ⑤ sharpen the most important messages of the past.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

In our attempts to teach children desirable attitudes and behaviors, it is important that we explain to them the principles or reasons behind desired actions. ① For example, rather than threatening to punish athletes for heckling opponents, a coach might help his athletes understand the golden rule — "Do unto others as you would have them do unto you" — by asking them to consider what it would be like to be the victims of heckling. ② This procedure encourages athletes to develop empathy for their opponents. ③ Through competition, athletes can gain self-esteem, confidence and strength, which benefits all aspects of their lives. ④ The ability to place oneself in the role of another person is essential to the development of morality. ⑤ Understanding and applying this golden rule can thus lead children to internalize the concept of sportsmanship and consideration for others. *heckle 야유를 퍼붓다

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

The searchability of online works represents a variation on older navigational aids such as tables of contents, indexes, and concordances. But the effects are different. As with links, the ease and ready availability of searching make it much simpler to jump between digital documents than it ever was to jump between printed ones. Our attachment to any one text becomes more tenuous, more transitory. Searches also lead to the fragmentation of online works. A search engine often draws our attention to a particular snippet of text, a few words or sentences that have strong relevance to whatever we're searching for at the moment, while providing little incentive for taking in the work as a whole. We don't see the forest when we search the Web. We don't even see the trees. We see twigs and leaves.

As online search becomes easier and speedier, people's attachment to a text tends to become more ____ (A) ____, and their interest in the whole content ____ (B) ____.

- | (A) | | (B) | | (A) | | (B) |
|---------------|-------|------------|--|-------------|-------|------------|
| ① temporary | | expands | | ② temporary | | diminishes |
| ③ intense | | diminishes | | ④ intense | | expands |
| ⑤ complicated | | persists | | | | |
