

2027학년도 수능 대비 모의평가

1. 다음 글의 주제로 가장 적절한 것은?

Humans currently spend about \$750 billion a year on meat — the idea is that there's plenty of opportunity to slice into that market share. But the massive global meat industry isn't particularly keen to step aside and make room for new market entrants. The powerful cattlemen's lobby has exercised much influence to ensure that they play a role in shaping just how cultured meat will be regulated, while many of their members laugh at the product by calling it "fake meat." Initially, it was the science that kept cultured meat products from the market. Making cultured meat was just too expensive and the technology wasn't able to produce foods that were analogous to conventional products. But as the start-ups got better at their craft and the quality of their products improved, the biggest barrier to the market changed. It's a difficult regulatory landscape that's become the chief obstacle stopping people from getting cultured meat into markets around the globe and in front of consumers.

- ① the main problem with cultured meat's reaching consumers
- ② government opposition to standard meat industry regulations
- ③ influence of "fake meat" in the annual global tech conference
- ④ the reason for the negative public opinion to cultured meat
- ⑤ the function of lobbying for increasing meat consumption

2. 다음 글의 제목으로 가장 적절한 것은?

The conversation was lively, and we talked of recent medical discoveries exciting to me. Then my friend stated that he was "disappointed in science!" That caused me to ponder. I could not simply dismiss what he said. He is too thoughtful and sincere for that. Surely this modern, highly educated man did not mean he was disappointed in our discovering the composition of a human chromosome; or that the universe is expanding; or the reasons birds can fly; or the circulation of the blood; or the microbial cause of infectious disease. For this is science, the accurate explanation and description of the world as it is. Instead, as further conversation revealed, he was disappointed in the ways in which science has been used. He was disappointed that scientific progress has not cured the world's ills by abolishing wars and starvation; that gross human inequality is still widespread; that freedom is not universal; that torture exists; that happiness is not universal. My friend made a common mistake—a basic misunderstanding in the nature of knowledge. Knowledge is not immoral but amoral. It can be used for any purpose, but many people assume it will be used to further their favorite hopes for society—and this is the fundamental flaw. Knowledge of the world is one thing; its uses create a separate issue. To be disappointed that our progress in understanding has not remedied the social ills of the world is a legitimate view; to confuse this with the progress of knowledge is absurd. To argue that knowledge is not progressing because of the African or Middle Eastern conflicts misses the point. There is nothing inherent in knowledge that dictates any specific social or moral application.

- ① Knowledge Is Morality Neutral
- ② How to Solve Human Conflicts
- ③ Don't Give Up Morality in Any Case
- ④ Science Still Has a Long Way to Go
- ⑤ Mutual Understanding Through Communication

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Food politics is not a new phenomenon. A battle over the production of bread in Paris was the occasion of Marie Antoinette's unfortunate remark about eating cake, and increases in prices or taxes on food ① have provoked revolt in countless countries including colonial America. But in Europe in the twenty-first century, food politics is ② directed not at scarcity or justice but at identity. The Slow Food movement's prime concern is to protect the diverse, local traditions ③ responsible for artisanal food production and encourage people to eat local ingredients. The threatened loss of specific tastes and the local cultures that produce them animate this movement. They deploy the aesthetic and symbolic content of food in a search for a more authentic lifestyle anchored in local traditions, which then becomes the idiom ④ which political mobilization occurs. Thus, the Slow Food movement understands the food artisan, not as a conservative standing in the way of progress but as someone ⑤ charged with the preservation of local heritage.

*artisanal: 장인의 **deploy: 활용하다 ***mobilization: 동원

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Many predators use speed as a way of hunting their prey, though the acceleration of a predator is often more important than its top speed to its success in hunting. The critical factor to the outcome of a hunting chase is ① distance between predator and prey at the time the chase begins. If the predator manages to get ② close enough to its prey, it will have enough time to accelerate to a speed that is higher than the prey. If the chase begins with the predator too far from the prey, the predator will not be able to ③ sustain its speed to catch it. This is of course if the predator and prey engage in a ④ straight chase, which is often not the case; swerving and turning usually contribute to the success or failure of the prey's efforts to escape. Interestingly enough, very fast animals that depend on high speed to catch a prey animal often also depend on very slow speeds for their success as they try to position themselves to ⑤ widen the gap between themselves and their prey. They do this by stealth, and to be stealthy an animal needs to be slow and silent.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

Today's "digital natives" have grown up immersed in digital technologies and possess the technical aptitude to utilize the powers of their devices fully. ①But although they know which apps to use or which websites to visit, they do not necessarily understand the workings behind the touch screen. ②People need technological literacy if they are to understand machines' mechanics and uses. ③In much the same way as factory workers a hundred years ago needed to understand the basic structures of engines, we need to understand the elemental principles behind our devices. ④The lifespan of devices depends on the quality of software operating them as well as the structure of hardware. ⑤This empowers us to deploy software and hardware to their fullest utility, maximizing our powers to achieve and create.

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Melanoma, a dangerous form of skin cancer, becomes far harder to treat once it spreads, with survival rates dropping sharply in later stages. To address this challenge, pharmaceutical companies have turned to messenger RNA, or mRNA, technology, which had already proven effective in vaccine development. Merck and Moderna designed a treatment in which DNA from a patient's own tumor is sequenced to identify unique mutations. Based on this genetic fingerprint, an individualized mRNA drug is created to train the patient's immune system to recognize and attack cancer cells bearing those specific markers. In a recent phase 3 trial, this personalized therapy, administered alongside an established immunotherapy drug, resulted in a meaningfully lower rate of cancer recurrence and death compared to the immunotherapy drug used alone. Researchers describe the outcome as a landmark advance, though regulatory approval is still required before the treatment can be used in clinical practice.

Merck and Moderna's mRNA-based melanoma treatment, which is highly (A) to each patient's tumor profile, has shown clinical results that (B) the risk of cancer recurrence when combined with existing immunotherapy.

- | (A) | (B) | (A) | (B) |

정답 및 해설

1. [정답] ①

[해설]

이 글은 배양육이 시장에 진입하는 데 겪는 어려움에 대해 서술합니다. 처음에는 과학 기술과 비용이 문제였지만('Initially, it was the science...'), 기술이 발전하면서 가장 큰 장벽이 바뀌었다고 말합니다('the biggest barrier to the market changed'). 글의 마지막 부분에서 현재의 '가장 큰 장애물(chief obstacle)'은 '어려운 규제 환경(difficult regulatory landscape)'이라고 명확히 밝히고 있습니다. 따라서 이 글의 주제는 '배양육이 소비자에게 도달하는 데 있어 주된 문제점'으로 요약할 수 있습니다.

2. [정답] ①

[해설]

필자는 친구와의 대화를 통해 '지식' 그 자체와 '지식의 사용'을 구분해야 한다는 점을 깨닫는다. 글의 핵심 주장은 "Knowledge is not immoral but amoral(지식은 비도덕적인 것이 아니라 도덕과 무관하다)"이라는 문장에 명확히 드러난다. 즉, 지식 자체에는 선악이 없으며, 그것이 어떻게 사용되는지는 별개의 문제라는 것이다. 따라서 '지식은 도덕적으로 중립적이다'라는 제목이 가장 적절하다.

3. [정답] ④

[해설]

④번의 관계대명사 which 뒤에는 불완전한 절이 와야 합니다. 하지만 'political mobilization occurs'는 주어와 자동사로 이루어진 완전한 절입니다. 문맥상 '그 관용어 안에서 정치적 동원이 일어난다'는 의미가 되어야 하므로, 전치사 in을 포함한 'in which' 또는 관계부사 'where'가 와야 합니다. 따라서 which는 어법상 틀립니다.

4. [정답] ⑤

[해설]

포식자는 빠른 속도로 추격하기 전에, 은신(stealth)을 통해 먹잇감에게 들키지 않고 최대한 가까이 다가 가야 사냥 성공률을 높일 수 있다. 따라서 먹잇감과 의 간격을 '넓히기(widen)' 위해서가 아니라 '좁히기(narrow/close)' 위해 은밀하게 움직이는 것이 논리적으로 맞다. ⑤번 'widen'은 문맥에 어긋난다.

5. [정답] ④

[해설]

이 글의 전체적인 흐름은 디지털 원주민들이 기기를 잘 사용하지만 그 작동 원리를 이해하는 '기술적 소양(technological literacy)'이 필요하다는 것입니다. ③번 문장까지 이 주장을 뒷받침하고, ⑤번 문장은 이러한 이해가 우리에게 힘을 준다고 연결됩니다. 하지만 ④번 문장은 기기의 '수명'이 소프트웨어와 하드웨어의 품질에 달려있다는 내용으로, 사용자의 이해나 소양이라는 중심 주제에서 벗어난, 기기 자체의 물리적 특성에 대한 설명이므로 흐름과 관계가 없습니다.

6. [정답] ④

[해설]

지문에서 치료법은 환자 개인의 종양 DNA에서 얻은 고유한 돌연변이 정보를 바탕으로 만들어진다고 명시되어 있으므로 (A)는 'tailored(맞춤화된)'가 적절하며, 병용 투여 시 재발과 사망 위험이 면역치료제 단독 사용보다 낮아졌다고 했으므로 (B)는 'lower(낮추다)'가 적절하다. 따라서 정답은 1번이다. 2번은 (B) 'mask(감추다)'가 결과를 은폐한다는 의미로 지문의 '위험 감소'라는 명확한 결과와 반대된다. 3번은 (A) 'restricted(제한된)'가 맞춤형 개인화라는 지문의 핵심 특징과 다르다. 4번은 (A) 'generalized(일반화된)'가 개인 맞춤형이라는 내용과 정반대이며 (B) 'raise(높이다)'도 재발 위험이 낮아졌다는 결과와 반대된다. 5번은 (A) 'delayed(지연된)'가 종양 분석 및 약물 제작 과정의 특성과 무관하고 (B) 'mask' 역시 결과를 왜곡한다.
