1. 다음 글의 주제로 가장 적절한 것은?

Why do disagreements about vaccines, climate change or elections often feel so personal? Our research suggests it is not simply because other people have different beliefs, but because we think those beliefs are mistaken. Public debate over polarization often starts with the idea that people prefer others who think like them, a tendency social scientists call homophily. This idea has strong intuitive appeal, since people often live near others who share their politics and consume media that fits their existing views. However, our studies with more than 2,000 U.S. adults suggest this story is incomplete. People do not react the same way to all disagreements; they are especially disturbed when they are convinced someone else's belief is factually wrong, rather than simply different from their own. Participants who framed another's view as incorrect reported far stronger feelings of frustration and were more likely to avoid or distrust that person, even when the underlying facts presented to them were identical.

- ① 사실 정보를 정확히 전달하면 사회적 갈등이 완전히 해소된다는 것
- ② 인간관계에서 유사성이 신뢰 형성에 미치는 보편적 영향
- ③ 사람들이 정치적 견해가 비슷한 이웃과 어울리는 이유
- ④ 소셜 미디어가 정치적 양극화를 심화시키는 구조적 원인
- ⑤ 사람들이 단순한 의견 차이보다 상대의 믿음이 틀렸다고 여길 때 더 큰 반감을 느낀다는 것

2. 다음 글의 제목으로 가장 적절한 것은?

We experience weather — the state of the atmosphere at any given moment in time through changes in temperature, humidity, rainfall, cloudiness, and wind. Although weather may change from moment to moment, weather events such as storms may last from several hours to several days. Specific locations around the world tend to experience relatively unique weather patterns based on features of latitude, nearness to large water bodies, and unique terrain (e.g., mountains). Collectively these features and the general circulation of the Earth's atmosphere and oceans shape a location's climate. Climate can be defined as the long-term average weather patterns for a specific region. Robert Heinlein stated, "Climate is what on an average we may expect; weather is what we actually get." J. Marshall Shepherd, former president of the American Meteorological Society, similarly stated, "Weather is your mood and climate is your personality." A more precise, operational climate definition is the average weather conditions over thirty years.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Trying to produce everything yourself would mean you are using your time and resources to produce many things ①for which you are a high-cost provider. This would translate into lower production and income. For example, even though most doctors might be good at record keeping and arranging appointments, ②it is generally in their interest to hire someone to perform these services. The time doctors use to keep records is time they could have spent seeing patients. Because the time ③spent with their patients is worth a lot, the opportunity cost of record keeping for doctors will be high. Thus, doctors will almost always find it ④advantageous to hire someone else to keep and manage their records. Moreover, when the doctor specializes in the provision of physician services and ⑤hiring someone who has a comparative advantage in record keeping, costs will be lower and joint output larger than would otherwise be achievable.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? (3점)

Once an event is noticed, an onlooker must decide if it is truly an emergency. Emergencies are not always clearly (a) ① labeled as such; "smoke" pouring into a waiting room may be caused by fire, or it may merely indicate a leak in a steam pipe. Screams in the street may signal an attack or a family quarrel. A man lying in a doorway may be having a coronary — or he may simply be sleeping off a drunk. A person trying to interpret a situation often looks at those around him to see how he should react. If everyone else is calm and indifferent, he will tend to remain so; if everyone else is reacting strongly, he is likely to become alert. This tendency is not merely blind conformity; ordinarily we derive much valuable information about new situations from how others around us behave. It's a (b) ② rare traveler who, in picking a roadside restaurant, chooses to stop at one where no other cars appear in the parking lot. But occasionally the reactions of others provide (c) ③ accurate information. The studied nonchalance of patients in a dentist's waiting room is a poor indication of their inner anxiety. It is considered embarrassing to "lose your cool" in public. In a potentially acute situation, then, everyone present will appear more (d) ④ unconcerned than he is in fact. A crowd can thus force (e) ⑤ inaction on its members by implying, through its passivity, that an event is not an emergency. Any individual in such a crowd fears that he may appear a fool if he behaves as though it were.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

Streams generally contain an abundant supply of oxygen which is almost uniform throughout, even when there are no green plants, because of the large surface exposed to air and constant motion of water. This helps in easy respiration. ① Because of this reason, the animals in running water are sensitive to reduced oxygen content. ② Therefore, stream communities are especially sensitive to any type of organic pollution which reduces the oxygen supply. ③ Policy makers must constantly work to balance the concerns of a sensitive environment with those of developing economies struggling to compete globally. ④ When organic matter from sewage or waste from a paper mill is dumped in large quantities into streams, the oxygen in the water is consumed or used up in the bacterial decay process. ⑤ Stream pollution of this type is one of the most important problems in heavily populated and industrialized regions.

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Crows are a remarkably clever family of birds. They are capable of solving many more complex problems compared to other birds, such as chickens. After hatching, chickens peck busily for their own food much faster than crows, which rely on the parent bird to bring them food in the nest. However, as adults, chickens have very limited hunting skills whereas crows are much more flexible in hunting for food. Crows also end up with bigger and more complex brains. Their extended period between hatching and flight from the nest enables them to develop intelligence.

Crows are more (A) than chickens because crows have a longer period of (B) .
