

2027학년도 수능 대비 모의평가

1. 다음 글의 주제로 가장 적절한 것은?

I recently returned from leading an educational program in Thailand focusing on how Buddhists practice the religion in their day-to-day lives. Many Western Buddhists' practices center on meditation, and I have taught many students in the U.S. who share this narrow understanding. However, as I show in my recent book, Buddhism is more than an intellectual tradition focused on the mind. In countries with a majority Buddhist population, such as Thailand, Buddhist practice involves rituals, offerings to monks and visits to temples. A central part of daily practice is merit-making, such as placing gold leaf on Buddha statues or offering donations connected to one's birth day and year. Another foundational feature is the relationship between monks and laity, in which monks provide spiritual guidance in exchange for alms. These lived, communal practices show that Thai Buddhism is expressed not merely through private contemplation but through concrete daily rituals and social bonds.

- ① Thai Buddhists' emphasis on donating gold leaf to Buddha statues for healing purposes
- ② the universal decline of meditation practice among Buddhists worldwide
- ③ the historical origins of Theravada Buddhism in Southeast Asia
- ④ the negative effects of the COVID-19 pandemic on global religious institutions
- ⑤ the everyday rituals and communal relationships that give practical expression to Buddhism in Thailand

2. 다음 글의 제목으로 가장 적절한 것은?

Why not simply take everything you can get, whenever the opportunity arises? Why not determine to live in that manner? Or is there an alternative, more powerful and more compelling? Our ancestors worked out very sophisticated answers to such questions, but we still don't understand them very well. This is because they are in large part still implicit – appear primarily in ritual and myth, and incompletely expressed. We act them out and represent them in stories, but we're not yet wise enough to formulate them explicitly. We're still chimps in a troupe, or wolves in a pack. We know how to behave. We know who's who, and why. We've learned that through experience. Our knowledge has been shaped by our interaction with others. We've established predictable routines and patterns of behavior but we don't really understand them, or know where they originated. They've evolved over great expanses of time. No one was formulating them explicitly even though we've been telling each other how to act forever.

- ① Knowledge Can't Exist Until It Can Be Expressed
- ② Greed: One of the Most Powerful Human Emotions
- ③ Our Values Developed Before We Fully Understood Them
- ④ Using Myths to Pass Lessons on to the Next Generation
- ⑤ Understanding Human Behavior: Predictions Do Matter

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

In some cases two species are so dependent upon each other ① that if one becomes extinct, the other will as well. This nearly happened with trees that ② relied on the now-extinct Dodo birds. They once roamed Mauritius, a tropical island ③ situating in the Indian Ocean. However, Dodo birds became extinct during the late 19th century. They were overhunted by humans and other animals. After they ④ disappeared, the Calvaria Tree soon stopped sprouting seeds. Scientists finally concluded that, for the seeds of the Calvaria Tree ⑤ to sprout, they needed to first be digested by the Dodo bird.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? (3점)

Plant growth is controlled by a group of hormones called auxins found at the tips of stems and roots of plants. Auxins produced at the tips of stems tend to accumulate on the side of the stem that is in the shade. Accordingly, the auxins ①stimulate growth on the shaded side of the plant. Therefore, the shaded side grows faster than the side facing the sunlight. This phenomenon causes the stem to bend and appear to be growing ②towards the light. Auxins have the ③opposite effect on the roots of plants. Auxins in the tips of roots tend to limit growth. If a root is horizontal in the soil, the auxins will accumulate on the lower side and interfere with its development. Therefore, the lower side of the root will grow ④faster than the upper side. This will, in turn, cause the root to bend ⑤downwards, with the tip of the root growing in that direction.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

Findings from several studies on nonpatient groups such as university students suggest that simply looking at everyday nature, as compared to built scenes that lack nature, is significantly more effective in promoting restoration from stress. ① One early study focused on students who were experiencing mild stress because of a final course exam. ② A self-ratings questionnaire was used to assess restorative influences of viewing either a diverse slide sample of unblighted built settings lacking nature, or slides of undistinguished nature settings dominated by green vegetation. ③ Results suggested that the nature views fostered greater psychological restoration as indicated by larger reductions in negative feelings such as fear and anger/ aggression and much higher levels of positive feelings. ④ The new-made views of concrete jungle selected to target these feelings directly helped to create an environment offering stress restoration. ⑤ Also, the scenes with vegetation sustained interest and attention more effectively than did the urban scenes without nature.

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

A few scientists from Duke University and University College London decided to find out what happens inside our brains when we lie. They put people into an fMRI scanner and had them play a game where they lied to their partner. The first time people told a lie, the amygdala weighed in. It released chemicals that give us the familiar, but sickening, sense of guilt we get when we lie. But then the researchers went one step further. They rewarded people for lying. They gave them a small monetary reward for deceiving their partner without them knowing they'd been lied to. Once people started getting rewarded for lying and not getting caught, that amygdaladriven sense of guilt started to fade. More interestingly, the less our brain is bothered by the lies, the bigger the lies we tell. So people started telling bigger and bigger lies. Despite being small at the beginning, engagement in dishonest acts may trigger a process that leads to larger acts of dishonesty later on.

The experiment above suggests that when people tell lies, their brain chemistry changes, affecting their feelings of (A) and leading them to tell (B) lies.

- | (A) | (B) | (A) | (B) |
|-----------|------------------|-----------|------------------|
| ① prize | bigger | ② guilt | harsher |
| ③ guilt | bigger | ④ benefit | preventing |
| ⑤ penalty | inhibiting | | |

정답 및 해설

1. [정답] ⑤

[해설]

지문은 서구식 명상 중심의 불교 이해가 협소하다는 통념을 지적한 뒤, 태국 불교가 공덕 쌓기 의례와 승려-재가자 관계와 같은 구체적인 일상 실천과 공동체적 유대를 통해 표현된다는 점을 근거로 제시하며 주장을 뒷받침한다. 따라서 정답은 ⑤('the everyday rituals and communal relationships that give practical expression to Buddhism in Thailand')이다. ①('금박을 붙이는 것에 대한 강조')은 공덕 쌓기의 한 사례에 불과한 지나치게 좁은 진술이다. ②('전 세계적인 명상 수행의 쇠퇴')은 지문에 언급되지 않았을 뿐 아니라 지문의 취지와도 무관한 지나치게 넓은 진술이다. ③('태국 불교의 역사적 기원')은 지문에서 다루지 않은 내용이다. ④('코로나19가 종교 기관에 미친 부정적 영향')은 승려-재가자 관계가 시험받은 사례로 잠깐 언급되었을 뿐, 글 전체의 주제가 아니므로 지나치게 좁고 지엽적인 진술이다.

2. [정답] ③

[해설]

이 글은 인류의 행동 방식과 가치 체계가 명시적으로 공식화되거나 완전히 이해되기 훨씬 이전부터, 오랜 시간에 걸쳐 경험과 상호작용을 통해 암묵적으로 진화하고 발전해왔다고 주장한다. 'We act them out ... but we're not yet wise enough to formulate them explicitly'와 'we don't really understand them, or know where they originated' 등의 구절이 이를 뒷받침한다. 따라서 우리의 가치는 우리가 그것을 완전히 이해하기 전에 발달했다는 제목이 가장 적절하다.

3. [정답] ③

[해설]

③ 'situating'은 앞의 명사 'a tropical island'를 수식하는 분사 자리이다. 섬(island)은 인도양에 위치해 있는 대상이므로, 능동의 의미를 가진 현재분사 'situating'이 아니라 수동의 의미를 가진 과거분사 'situated'를 써야 한다. (which is situated in the Indian Ocean에서 which is가 생략된 형태)

4. [정답] ④

[해설]

지문에 따르면 옥신은 뿌리 끝에서 성장을 '억제(limit)'하는 경향이 있습니다. 수평인 뿌리의 아래쪽에 옥신이 축적되면 그 부분의 발달을 '방해(interfere with)'합니다. 따라서 뿌리의 아래쪽은 위쪽보다 '더 느리게(slower)' 자라야 합니다. 이렇게 아래쪽이 느리게 자라야 뿌리가 아래로 휘게 되므로, 'faster'는 문맥상 적절하지 않습니다.

5. [정답] ④

[해설]

이 글의 핵심 주제는 '자연 경관을 보는 것이 스트레스 회복에 도움이 된다'는 것입니다. ①, ②, ③, ⑤번 문장은 모두 이 주제를 뒷받침하는 연구 내용과 결과를 설명합니다. 그러나 ④번 문장은 '콘크리트 정글의 경관이 스트레스 회복에 도움이 되는 환경을 만들었다'고 서술하여, 자연이 아닌 인공 경관의 긍정적 효과를 언급하므로 전체 글의 흐름과 상반됩니다.

6. [정답] ③

[해설]

본문의 내용을 한 문장으로 요약하고 빈칸을 채우는 문제. fMRI 실험 결과, 사람들이 거짓말을 반복하고 보상을 받자 뇌의 편도체(amygdala) 반응이 줄어들었다. 편도체는 죄책감과 같은 부정적 감정과 관련이 있으므로, 이는 거짓말에 대한 (A) '죄책감(guilt)'이 무뎌지는 것을 의미한다. 그리고 이러한 뇌의 변화는 사람들이 점차 '더 큰 거짓말(bigger and bigger lies)'을 하도록 이끌었다고 본문은 설명한다. 따라서 정답은 ③ (guilt, bigger)이다.
