1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

The early grain trade firms were active in both surplus-producing and food deficit regions, and these firms made it their business to know the state of supply and demand in both. Because this information was the key to their _____, these firms worked in relative secrecy, frequently built on family ties, trust, and loyalty. In addition, these firms were able to benefit from the rise of commodity exchanges and commodities futures markets that emerged in the mid-1800s. Agricultural markets are naturally unstable, due to changes in harvest size that result from variable weather patterns and other factors. Locking-in prices by buying and selling grain for future delivery helped these firms to minimize such risks. It made sense for the grain trading companies to manage their risks within a single firm that was operating in more than one country, rather than operating as independent national companies trading with each other. Their access to information in multiple markets enabled them to easily cover the risks associated with agricultural commodity trade.

- ① profitability
- ② unification
- ③ innovation
- ④ reputation
- ⑤ morality

When examining the archaeological record of human culture, one has to consider that it is vastly _____. Many aspects of human culture have what archaeologists describe as low archaeological visibility, meaning they are difficult to identify archaeologically. Archaeologists tend to focus on tangible (or material) aspects of culture: things that can be handled and photographed, such as tools, food, and structures. Reconstructing intangible aspects of culture is more difficult, requiring that one draw more inferences from the tangible. It is relatively easy, for example, for archaeologists to identify and draw inferences about technology and diet from stone tools and food remains. Using the same kinds of physical remains to draw inferences about social systems and what people were thinking about is more difficult. Archaeologists do it, but there are necessarily more inferences involved in getting from physical remains recognized as trash to making interpretations about belief systems.

*archaeological: 고고학의

- ① outdated
- ② factual
- ③ incomplete
- ④ organized
- ⑤ detailed

The fossil record provides evidence of evolution. The story the fossils tell is one of change. Creatures existed in the past that are no longer with us. Sequential changes are found in many fossils showing the change of certain features over time from a common ancestor, as in the case of the horse.

- (A) If multicelled organisms were indeed found to have evolved before single-celled organisms, then the theory of evolution would be rejected. A good scientific theory always allows for the possibility of rejection. The fact that we have not found such a case in countless examinations of the fossil record strengthens the case for evolutionary theory.
- (B) The fossil record supports this prediction — multicelled organisms are found in layers of earth millions of years after the first appearance of single-celled organisms. Note that the possibility always remains that the opposite could be found.
- (C) Apart from demonstrating that evolution did occur, the fossil record also provides tests of the predictions made from evolutionary theory. For example, the theory predicts that single-celled organisms evolved before multicelled organisms.

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect.

- (A) The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based.
- (B) Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and filtered by another consciousness.
- (C) The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind.

Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off.

Introduction of robots into factories, while employment of human workers is being reduced, creates worry and fear. (①) It is the responsibility of management to prevent or, at least, to ease these fears. (②) For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. (③) Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process. (④) It may be that robots are needed to reduce manufacturing costs so that the company remains competitive, but planning for such cost reductions should be done jointly by labor and management. (⑤) Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions where judgment and decisions beyond the abilities of robots are required.

The difference is that the action in the game world can only be explored through the virtual bodily space of the avatar.

A video game has its own model of reality, internal to itself and separate from the player's external reality, the player's bodily space and the avatar's bodily space. (①) The avatar's bodily space, the potential actions of the avatar in the game world, is the only way in which the reality of the external reality of the game world can be perceived. (②) As in the real world, perception requires action. (③) Players extend their perceptual field into the game, encompassing the available actions of the avatar. (④) The feedback loop of perception and action that enables you to navigate the world around you is now one step removed: instead of perceiving primarily through interaction of your own body with the external world, you're perceiving the game world through interaction of the avatar. (⑤) The entire perceptual system has been extended into the game world.
