

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

One word is inextricably associated with geography: where. That is because geography starts from the premise that it matters where something takes place on Earth's surface. The key questions are not simply "where" questions, though; they are "why there" and "so what" questions. Getting to such questions means taking spatial arrangements, variations, and interconnections seriously. Engaging in even the simplest day-to-day activity requires some appreciation of spatial circumstances — where to find food and services, how to get to work places, and the like. Moving up in scale, without some awareness of _____, it is difficult to make reasoned business or policy judgments, make sense of events, or grasp some of the basic forces shaping life on the planet. Locating a new store or public service requires taking into consideration population distributions, the location of roads and utilities, socio-economic patterns, and more. Understanding why and where migration happens requires consideration of the political organization of territory, the spatial consequences of discrimination, socio-economic patterns, and the layout of the physical environment.

- ① why cross-cultural conflicts will increase
- ② how phenomena are arranged on Earth's surface
- ③ when the Earth's natural resources will be exhausted
- ④ which places on Earth are damaged by climate change
- ⑤ who has the authority to make decisions about territories

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

When we narrow, we're redirecting all of our computing power to the handful of processes that matter. It's as if to help with our slow Wi-Fi, we disconnect our phone and tablet, just so that our video conference call won't lag. Narrowing also helps with goal attainment. It cuts out all of the other distractions and places the most important goal front and center. When we home in, we increase motivational intensity, reinforcing that what's in front of us is what we should be after. For a brief moment, the trade-off can be worthwhile, but when we _____, we start to miss cues and signals. We get locked in on one path without being able to step back and see a better route. When we're stuck narrowed in for too long, accidents go up and performance drops. We miss hearing alarms that signal there's a problem elsewhere.

- ① get distracted by too many sources
- ② rely too heavily on digital devices
- ③ randomly switch between tasks
- ④ remain zoomed in for too long
- ⑤ fail to control our feelings

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

If learning were simply a matter of accumulating lists of facts, then it shouldn't make any difference if we are presented with information that is just a little bit beyond what we already know or totally new information.

- (A) If we are trying to understand something totally new, however, we need to make larger adjustments to the units of the patterns we already have, which requires changing the strengths of large numbers of connections in our brain, and this is a difficult, tiring process.
- (B) The adjustments are clearly smallest when the new information is only slightly new when it is compatible with what we already know, so that the old patterns need only a little bit of adjustment to accommodate the new knowledge.
- (C) Each fact would simply be stored separately. According to connectionist theory, however, our knowledge is organized into patterns of activity, and each time we learn something new we have to modify the old patterns so as to keep the old material while adding the new information.

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

The growing complexity of computer software has direct implications for our global safety and security, particularly as the physical objects upon which we depend things like cars, airplanes, bridges, tunnels, and implantable medical devices transform themselves into computer code.

- (A) As all this code grows in size and complexity, so too do the number of errors and software bugs. According to a study by Carnegie Mellon University, commercial software typically has twenty to thirty bugs for every thousand lines of code 50 million lines of code means 1 million to 1.5 million potential errors to be exploited.
- (B) This is the basis for all malware attacks that take advantage of these computer bugs to get the code to do something it was not originally intended to do. As computer code grows more elaborate, software bugs flourish and security suffers, with increasing consequences for society at large.
- (C) Physical things are increasingly becoming information technologies. Cars are "computers we ride in," and airplanes are nothing more than "flying Solaris boxes attached to bucketfuls of industrial control systems."

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

It may be easier to reach an agreement when settlement terms don't have to be implemented until months in the future.

Negotiators should try to find ways to slice a large issue into smaller pieces, known as using salami tactics. (①) Issues that can be expressed in quantitative, measurable units are easy to slice. (②) For example, compensation demands can be divided into cents-per-hour increments or lease rates can be quoted as dollars per square foot. (③) When working to fractionate issues of principle or precedent, parties may use the time horizon (when the principle goes into effect or how long it will last) as a way to fractionate the issue. (④) Another approach is to vary the number of ways that the principle may be applied. (⑤) For example, a company may devise a family emergency leave plan that allows employees the opportunity to be away from the company for a period of no longer than three hours, and no more than once a month, for illness in the employee's immediate family.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

In particular, they define a group as two or more people who interact with, and exert mutual influences on, each other.

In everyday life, we tend to see any collection of people as a group. (①) However, social psychologists use this term more precisely. (②) It is this sense of mutual interaction or inter-dependence for a common purpose which distinguishes the members of a group from a mere aggregation of individuals. (③) For example, as Kenneth Hodge observed, a collection of people who happen to go for a swim after work on the same day each week does not, strictly speaking, constitute a group because these swimmers do not interact with each other in a structured manner. (④) By contrast, a squad of young competitive swimmers who train every morning before going to school is a group because they not only share a common objective (training for competition) but also interact with each other in formal ways (e.g., by warming up together beforehand). (⑤) It is this sense of people coming together to achieve a common objective that defines a "team".
