

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Even as mundane a behavior as watching TV may be a way for some people to . To test this idea, Sophia Moskalenko and Steven Heine gave participants false feedback about their test performance, and then seated each one in front of a TV set to watch a video as the next part of the study. When the video came on, showing nature scenes with a musical soundtrack, the experimenter exclaimed that this was the wrong video and went supposedly to get the correct one, leaving the participant alone as the video played. The participants who had received failure feedback watched the video much longer than those who thought they had succeeded. The researchers concluded that distraction through television viewing can effectively relieve the discomfort associated with painful failures or mismatches between the self and self-guides. In contrast, successful participants had little wish to be distracted from their self-related thoughts!

*mundane: 보통의

- ① ignore uncomfortable comments from their close peers
- ② escape painful self-awareness through distraction
- ③ receive constructive feedback from the media
- ④ refocus their divided attention to a given task
- ⑤ engage themselves in intense self-reflection

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Because the environment plays a significant role in aiding meaningful internal processes, subjective experience and the environment act as a 'coupled system.' This coupled system can be seen as a complete cognitive system of its own. In this manner, subjective experience is extended into the external environment and vice versa; the external environment with its disciplinary objects such as institutional laws and equipment becomes mental institutions that _____. A subjectively held belief attains the status of objectivity when the belief is socially shared. That is, even if we are trained as hard-nosed health care rationalists, or no-nonsense bureaucrats, or data-driven scientists, research has shown that our decisions are influenced by various institutional practices. They include bureaucratic structures and procedures, the architectural design of health care institutions, the rules of evidence and the structure of allowable questions in a courtroom trial, the spatial arrangement of kindergartens and supermarkets, and a variety of conventions and practices designed to manipulate our emotions. 3점

- ① affect our subjective experience and solutions
- ② serve as advocates for independent decision-making
- ③ position social experience within the cognitive system
- ④ comprise subjective interpretations of the environment
- ⑤ facilitate the construction of our concept of subjectivity

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

The most commonly known form of results-based pricing is a practice called contingency pricing, used by lawyers.

- (A) Therefore, only an outcome in the client's favor is compensated. From the client's point of view, the pricing makes sense in part because most clients in these cases are unfamiliar with and possibly intimidated by law firms. Their biggest fears are high fees for a case that may take years to settle.
- (B) By using contingency pricing, clients are ensured that they pay no fees until they receive a settlement. In these and other instances of contingency pricing, the economic value of the service is hard to determine before the service, and providers develop a price that allows them to share the risks and rewards of delivering value to the buyer.
- (C) Contingency pricing is the major way that personal injury and certain consumer cases are billed. In this approach, lawyers do not receive fees or payment until the case is settled, when they are paid a percentage of the money that the client receives. 3점

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

A fascinating species of water flea exhibits a kind of flexibility that evolutionary biologists call adaptive plasticity.

- (A) That's a clever trick, because producing spines and a helmet is costly, in terms of energy, and conserving energy is essential for an organism's ability to survive and reproduce. The water flea only expends the energy needed to produce spines and a helmet when it needs to.
- (B) If the baby water flea is developing into an adult in water that includes the chemical signatures of creatures that prey on water fleas, it develops a helmet and spines to defend itself against predators. If the water around it doesn't include the chemical signatures of predators, the water flea doesn't develop these protective devices.
- (C) So it may well be that this plasticity is an adaptation: a trait that came to exist in a species because it contributed to reproductive fitness. There are many cases, across many species, of adaptive plasticity. Plasticity is conducive to fitness if there is sufficient variation in the environment.

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

This active involvement provides a basis for depth of aesthetic processing and reflection on the meaning of the work.

There are interesting trade-offs in the relative importance of subject matter (i.e., figure) and style (i.e., background). (①) In highly representational paintings, plays, or stories, the focus is on subject matter that resembles everyday life and the role of background style is to facilitate the construction of mental models. (②) Feelings of pleasure and uncertainty carry the viewer along to the conclusion of the piece. (③) In highly expressionist works, novel stylistic devices work in an inharmonious manner against the subject matter thereby creating a disquieting atmosphere. (④) Thus, when the work is less "readable" (or easily interpreted), its departure from conventional forms reminds the viewer or reader that an "aesthetic attitude" is needed to appreciate the whole episode. (⑤) An ability to switch between the "pragmatic attitude" of everyday life and an "aesthetic attitude" is fundamental to a balanced life. 3점

주어진 문장 This active involvement provides a basis for depth of aesthetic processing and reflection on the meaning of the work.

A problem, however, is that supervisors often work in locations apart from their employees and therefore are not able to observe their subordinates' performance.

In most organizations, the employee's immediate supervisor evaluates the employee's performance. (①) This is because the supervisor is responsible for the employee's performance, providing supervision, handing out assignments, and developing the employee. (②) Should supervisors rate employees on performance dimensions they cannot observe? (③) To eliminate this dilemma, more and more organizations are implementing assessments referred to as 360-degree evaluations. (④) Employees are rated not only by their supervisors but by coworkers, clients or citizens, professionals in other agencies with whom they work, and subordinates. (⑤) The reason for this approach is that often coworkers and clients or citizens have a greater opportunity to observe an employee's performance and are in a better position to evaluate many performance dimensions.
