Writers often give us the impression that they have described the faces of their characters, when in fact they have simply given you an outline to fill in. Of Esch, the most important character in Hermann Broch's masterpiece *The Sleepwalkers*, we learn only that he has big teeth. Even so, we don't feel as if his face is a dentate blankness. Most often, we mistake being told what effect someone's appearance has for an account of that appearance. The poet Mallarmé's advice *Peindre non la chose, mais l'effet qu'elle produit* ('Paint not the thing itself but the effect it produces') sounds like a self-denying ordinance. Actually it is a rather clever way out of an intractable problem. When, in one of his novels, Evelyn Waugh says of a new character, that 'he had just the kind of appearance one would expect a young man of his type to have' and nothing else, you still feel as if you _____.

- ① have been told exactly what he looks like
- ② have become a member of his social group
- ③ already know what will happen to him in the story
- ④ have been given precise details about his behavior
- ⑤ recognize the core characteristics of his personality

Although empathy is widely praised by scholars and public figures, not everyone is an empathy booster. Critics of empathy argue that empathy will not save us from interpersonal and intergroup conflict. In fact, they argue, empathy makes such conflicts worse. These critics maintain that empathy can be exhausting and lead to burnout, insensitivity to suffering, or worse. They argue that we tend to empathize strongly with our in-group and resist empathizing with out-groups, and even enjoy the suffering of out-groups in competitive or threatening contexts. Thus, the prescription for more empathy _____. Empathy, they argue, can further entrench conflict and force us into an us vs. them mentality. Finally, even when we try to empathize with others who are dissimilar from us or in unfamiliar contexts, sometimes we are unable to accurately empathize with their experiences, causing further misunderstandings and frustration. Critics of empathy argue that we should give up on empathy and employ other tools in pursuit of social harmony, e.g., rational compassion or moral emotions like fear, anger, and shame.

- ① underestimates the invisible conflicts possible within a group
- ② is triggered by the need for solutions to emotional conflicts
- ③ is often counterproductive in cases of conflict
- ④ functions as a facilitator in the resolution of social disharmony
- ⑤ raises questions about negative attitudes toward social disharmony

The generally close connection between health and what animals want exists because wanting to obtain the right things and wanting to avoid the wrong ones are major ways in which animals keep themselves healthy.

- (A) They can take pre-emptive action so that the worst never happens. They start to want things that will be necessary for their health and survival not for now but for some time in the future.
- (B) Animals have evolved many different ways of maintaining their health and then regaining it again once it has been damaged, such as an ability to heal wounds when they are injured and an amazingly complex immune system for warding off infection.
- (C) Animals are equally good, however, at dealing with injury and disease before they even happen. They have evolved a complex set of mechanisms for anticipating and avoiding danger altogether.

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

In economics, there is a principle known as the sunk cost fallacy. The idea is that when you are invested and have ownership in something, you overvalue that thing.

- (A) Sometimes, the smartest thing a person can do is quit. Although this is true, it has also become a tired and played-out argument. Sunk cost doesn't always have to be a bad thing.
- (B) This leads people to continue on paths or pursuits that should clearly be abandoned. For example, people often remain in terrible relationships simply because they've invested a great deal of themselves into them. Or someone may continue pouring money into a business that is clearly a bad idea in the market.
- (C) Actually, you can leverage this human tendency to your benefit. Like someone invests a great deal of money in a personal trainer to ensure they follow through on their commitment, you, too, can invest a great deal up front to ensure you stay on the path you want to be on.

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

At the next step in the argument, however, the analogy breaks down.

Misprints in a book or in any written message usually have a negative impact on the content, sometimes (literally) fatally. (①) The displacement of a comma, for instance, may be a matter of life and death. (②) Similarly most mutations have harmful consequences for the organism in which they occur, meaning that they reduce its reproductive fitness. (③) Occasionally, however, a mutation may occur that increases the fitness of the organism, just as an accidental failure to reproduce the text of the first edition might provide more accurate or updated information. (④) A favorable mutation is going to be more heavily represented in the next generation, since the organism in which it occurred will have more offspring and mutations are transmitted to the offspring. (⑤) By contrast, there is no mechanism by which a book that accidentally corrects the mistakes of the first edition will tend to sell better.

It was not until relatively recent times that scientists came to understand the relationships between the structural elements of materials and their properties.

The earliest humans had access to only a very limited number of materials, those that occur naturally: stone, wood, clay, skins, and so on. (①) With time, they discovered techniques for producing materials that had properties superior to those of the natural ones; these new materials included pottery and various metals. (②) Furthermore, it was discovered that the properties of a material could be altered by heat treatments and by the addition of other substances. (③) At this point, materials utilization was totally a selection process that involved deciding from a given, rather limited set of materials, the one best suited for an application based on its characteristics. (④) This knowledge, acquired over approximately the past 100 years, has empowered them to fashion, to a large degree, the characteristics of materials. (⑤) Thus, tens of thousands of different materials have evolved with rather specialized characteristics that meet the needs of our modern and complex society, including metals, plastics, glasses, and fibers.
