The entrance to a honeybee colony, often referred to as the dancefloor, is a market place for information about the state of the colony and the environment outside the hive. Studying interactions on the dancefloor provides us with a number of illustrative examples of how individuals changing their own behavior in response to local information _____. For example, upon returning to their hive honeybees that have collected water search out a receiver bee to unload their water to within the hive. If this search time is short then the returning bee is more likely to perform a waggle dance to recruit others to the water source. Conversely, if this search time is long then the bee is more likely to give up collecting water. Since receiver bees will only accept water if they require it, either for themselves or to pass on to other bees and brood, this unloading time is correlated with the colony's overall need of water. Thus the individual water forager's response to unloading time (up or down) regulates water collection in response to the colony's need.

- ① allow the colony to regulate its workforce
- ② search for water sources by measuring distance
- ③ decrease the colony's workload when necessary
- ④ divide tasks according to their respective talents
- ⑤ train workers to acquire basic communication patterns

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

One of the factors determining the use of technologies of communication will be the kinds of investments made in equipment and personnel; who makes them, and what they expect in return. There is no guarantee that the investment will necessarily be in forms of communication that . Because the ownership of investment funds tends to be in the hands of commercial organisations, the modernisation of communications infrastructure only takes place on the basis of potential profitability. Take, for example, the installation of fibre-optic communications cable across the African continent. A number of African nations are involved in the development but its operational structures will be oriented to those who can pay for access. Many states that might wish to use it for education and information may not only find it too expensive but also simply unavailable to them. There can be no doubt that the development has been led by investment opportunity rather than community demand.

- ① require minimal cost and effort to maintain
- ② are most appropriate for the majority of people
- ③ are in line with current standards and global norms
- ④ employ some of the most advanced technologies
- ⑤ promote the commercial interests of companies

Negotiation can be defined as an attempt to explore and reconcile conflicting positions in order to reach an acceptable outcome.

- (A) Areas of difference can and do frequently remain, and will perhaps be the subject of future negotiations, or indeed remain irreconcilable. In those instances in which the parties have highly antagonistic or polarised relations, the process is likely to be dominated by the exposition, very often in public, of the areas of conflict.
- (B) In these and sometimes other forms of negotiation, negotiation serves functions other than reconciling conflicting interests. These will include delay, publicity, diverting attention or seeking intelligence about the other party and its negotiating position.
- (C) Whatever the nature of the outcome, which may actually favour one party more than another, the purpose of negotiation is the identification of areas of common interest and conflict. In this sense, depending on the intentions of the parties, the areas of common interest may be clarified, refined and given negotiated form and substance.

*reconcile: 화해시키다 **antagonistic: 적대적인 ***exposition: 설명

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

Traditionally, when teachers teach writing, they assign topics for students to write on; perhaps they do a bit of brainstorming about the topic during a pre-writing phase, and then have students write about the topic without interruption.

- (A) In process writing, on the other hand, students may initially brainstorm ideas about a topic and begin writing, but then they have repeated conferences with the teacher and the other students, during which they receive feedback on their writing up to that point, make revisions, based on the feedback they receive, and carry on writing.
- (B) In this way, students learn to view their writing as someone else's reading and to improve both the expression of meaning and the form of their writing as they draft and redraft. Process writing shifts the emphasis in teaching writing from evaluation to revision.
- (C) Subsequently, teachers collect and evaluate what students have written. Such instruction is very 'product-oriented;' there is no involvement of the teacher in the act or 'process' of writing.

- ① (A) - (C) - (B)
- ② (B) - (A) - (C)
- ③ (B) - (C) - (A)
- ④ (C) - (B) - (A)
- ⑤ (C) - (A) - (B)

Without any special legal protection for trade secrets, however, the secretive inventor risks that an employee or contractor will disclose the proprietary information.

Trade secret law aims to promote innovation, although it accomplishes this objective in a very different manner than patent protection. (①) Notwithstanding the advantages of obtaining a patent, many innovators prefer to protect their innovation through secrecy. (②) They may believe that the cost and delay of seeking a patent are too great or that secrecy better protects their investment and increases their profit. (③) They might also believe that the invention can best be utilized over a longer period of time than a patent would allow. (④) Once the idea is released, it will be "free as the air" under the background norms of a free market economy. (⑤) Such a predicament would lead any inventor seeking to rely upon secrecy to spend an inordinate amount of resources building high and impassable fences around their research facilities and greatly limiting the number of people with access to the proprietary information.

As long as the irrationalism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils the dimension of fantasy. (①) This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. (②) Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. (③) And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. (④) But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. (⑤) As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide."
