

2027학년도 수능 대비 모의평가

1. (A), (B), (C)의 각 네모 안에서 어법에 맞는 표현으로 가장 적절한 것은?

More than a billion people in the developing world (A) need / needs glasses. But opticians aren't exactly on every block in sub-Saharan Africa. In some places the ratio is one to one million residents. Pondering this problem, Oxford University physics professor Joshua Silver came up with a brilliantly simple solution: a pair of eyeglasses (B) what / which the wearer can adjust. Silicone oil is injected into a gap between two sheets of plastic until the lens provides sharp vision. As director of the new nonprofit Center for Vision in the Developing World, Silver envisions a billion pairs on needy eyes by 2020. So far, 30,000 pairs are in use in Africa and eastern Europe, two-thirds (C) distributed / distributing through U.S. military aid programs.

- ① needs what distributed
- ② needs what distributing
- ③ need what distributing
- ④ need which distributing
- ⑤ need which distributed

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

If there's one thing koalas are good at, it's sleeping. For a long time many scientists suspected that koalas were so lethargic ① because the compounds in eucalyptus leaves kept the cute little animals in a drugged-out state. But more recent research has shown that the leaves are simply so low in nutrients ② that koalas have almost no energy. Therefore they tend to move as little as possible — and when they ③ do move, they often look as though they're in slow motion. They rest sixteen to eighteen hours a day and spend most of that unconscious. In fact, koalas spend little time thinking; their brains actually appear to ④ have shrunk over the last few centuries. The koala is the only known animal ⑤ its brain only fills half of its skull.

*lethargic 무기력한 **drugged-out 몽롱한, 취한

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

A robot made in Japan can perform a journalist's tasks on its own by exploring its environment, determining ① what is relevant, and taking pictures with its built-in camera. It can even interview nearby people and perform Internet searches ② to improve its understanding. However, having a robot report news is not a new idea. Another robot called Stats Monkey can automatically use statistics to report sports news that ③ reads like it was written by a journalist. Furthermore, Australian scientist Ross Dawson points to News At Seven, a system ④ is developed by Northwestern University that automatically creates a virtual news show. ⑤ Using the resources available on the web, the system retrieves relevant images and blogs with comments on the topics to develop the text of the news stories.
