

## 2027학년도 수능 대비 모의평가

### 1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은?

Social media companies are working to keep you on site or attempting to deliver results useful to you. You can see this personalization reflected in the results of search engines, which try to maximize relevance: searching for "bakery" in New York should return different results than searching in Paris. Features like the little predictive-text cues of autocomplete also look to maximize relevance by suggesting refinements: typing in "cats" might prompt the user with "cats movie" or "cats that don't shed." Autocomplete suggestions offer a look into the algorithm's understanding of accumulated user behavior — an immensely important part of how key social media algorithms work. The outputs are personalized, but the data sets are massive, and the platforms are mining for similarities across vast quantities of user information. If a whole lot of users near you or similar to you complete the search that you've begun with specific words, the autocomplete algorithm takes that into account and may be more likely to suggest them to you. Since the results are derived from data related to millions of searches, autocomplete is, in a sense, holding a mirror up to society.

- ① manipulating search results in favor of the socially influential
- ② revealing commonalities in users and their shared interests
- ③ censoring personal data utilizing social media algorithms
- ④ collecting information useful for building user networks
- ⑤ examining apparently random data to find regularity

### 2. 다음 글의 제목으로 가장 적절한 것은?

The new views about and questions being asked about aging could be detected across society. "Something strange is happening in America," wrote Marj Jackson Levin for the St. Louis Post-Dispatch in 1988, finding that what she called "the former boundaries of age" were being expanded or relaxed in many arenas. Whether it was fortysomething baseball players, midlife women having babies, or the oldest president in the nation's history, it did indeed appear that the preconceptions surrounding aging were weakening. As baby boomers entered midlife, the idea of oldness was being pushed back, and the expectations for what people should or should not be doing at a particular age broadened. Turning fifty had only recently been commonly viewed as the unofficial turning of the corner into one's senior years, for example, but now that number did not automatically mean one could not start a new career or family. In a good number of cases, at least, age was becoming less significant, a clear victory for those lobbying for a less age-centric society.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Fashion is always deeply cultural, and an excellent example of this can be seen in the evolution of European clothing. At the beginning of the Middle Ages, clothing tended to be simple and was ①frequently made of rough wool or animal furs. With advances in cloth making, however, fashion began moving toward styles ②what were more elaborate and form-fitting. In the Renaissance and Elizabethan eras, styles became even more refined. The clothes that wealthy people were wearing became increasingly fancier, with a particular emphasis being placed on smaller waists. The connection between clothing and social status was so pronounced that laws were enacted ③to limit the wearing of certain luxury items. ④Allowed only for higher social classes, luxurious styles and decorations such as feathers, silk, or velvet were used as a means of demonstrating one's standing in society. This was further reinforced as upperclass styles came to be explicitly incorporated into cultural ceremonies so that ⑤their wearers' roles could be identified clearly.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? (3점)

There is good news about pests and medicinal herbs: Most herbs either repel pests or attract beneficial insects that help keep pest populations in check. So the more herbs you grow, the more you will attract pollinators and "good" bugs that like to eat the more ①destructive pests, which will lead to a more successful garden! When it comes to managing pests in the garden, it's important to remember that you are ②altering the ecosystem of an area that existed on its own before you planted anything into it. So the first couple years in a new garden can feel like wave after wave of pests are ③overtaking your plants. This is normal. The goal of a long-term healthy garden is to work with the environment you are trying to cultivate to ④allow the plants, pollinators, and even the annoying pests to balance out. Immediately attempting to remove a new pest entirely from your garden will only further these initial imbalances and ⑤shorten the process of helping your garden grow better on its own.

\*repel: 쫓아버리다 \*\*pollinator: 꽃가루 매개자

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Not only are our sensory systems organized to detect change, but they are most tuned to stimuli that are unexpected and surprising. When you move your body and produce tactile sensations, these stimuli are less noticeable to you than are sensations produced by another individual. The sensations of your own legs touching one another when you cross your legs, for example, are generally less noticeable than a similar touch on your leg would be if someone sitting next to you brushed their leg against yours. Likewise, your reaction to your cat jumping onto your lap is likely to be much greater if you have your eyes closed when it happens. This differential response to surprising tactile stimuli appears to be a defense mechanism that has adaptive significance. It is probably also the reason why being tickled by someone else is more effective at producing an emotional reaction than trying to tickle yourself. Our enjoyment of being tickled generally diminishes as we age. This is likely due to the fact that adults are \_\_\_\_\_, and hence are more difficult to surprise, than are children.

\*tactile: 촉각의 \*\*tickle: 간질이다

- ① more cautious of acting immediately
- ② less sensitive to others' reactions
- ③ stronger in their ability to focus
- ④ slower in adapting to changes
- ⑤ better at anticipating stimuli

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Imagination continues to function when perception is not actively discerning objects, in cases of emotion, disease, and sleep. Emotions dispose one to see the world in a distorted way. A coward's perceptual disposition is affected by his disposition to experience fear. A lover's expectations are affected by desire. In such cases, a small similarity between a perceived object and the thing one expects to see can lead to the misidentification of the perceived object as that thing. The coward sees the enemy, while the lover sees the object of desire everywhere. The more affected one is, \_\_\_\_\_. While the central organ of sense normally functions by comparing similarities and differences, emotions dispose one to discern objects inaccurately. The greater the emotional investment, the more biased one's perception.

- ① the more chances one gets to find differences
- ② the less similarity is required for the thing to appear
- ③ the sooner the perceived similarity fades away
- ④ the more easily one can sense the world the way it is
- ⑤ the less slowly different emotions are released

## 정답 및 해설

### 1. [정답]

#### [해설]

'거울을 비추다'는 표현은 알고리즘이 방대한 사용자 데이터에서 유사성과 공통점을 찾아내어 반영한다는 의미이다. 즉 자동완성 기능은 수많은 사용자들의 공통된 검색 패턴과 관심사를 드러내는 것이므로 정답은 ②이다.

---

### 2. [정답]

#### [해설]

나이에 대한 기존의 경계와 통념이 점점 약화되고 확장되고 있다는 사회적 변화를 다루고 있으므로 정답은 ①이다.

---

### 3. [정답]

#### [해설]

②의 what은 뒤에 완전한 주어 자리가 없는 불완전한 문장을 이끌어야 하는데, 뒤에 'were more elaborate and form-fitting'로 주어가 없는 불완전한 문장이 오므로 관계대명사가 필요하다. 그러나 선행사 styles가 있으므로 what이 아니라 that/which를 사용해야 한다. what은 선행사를 포함하는 관계대명사이므로 선행사 styles와 함께 쓸 수 없다.

---

### 4. [정답] ⑤

#### [해설]

새로운 해충을 즉시 제거하려는 시도는 불균형을 심화시켜 정원이 스스로 성장하도록 돕는 과정을 '단축'시키는 것이 아니라 '지연/연장'시킨다는 문맥이므로 'shorten'은 문맥상 부적절함. 'lengthen' 등이 적절.

---

### 5. [정답] ⑤

#### [해설]

성인은 아이보다 자극을 예측하는 능력이 뛰어나(better at anticipating stimuli) 놀라움을 덜 느끼게 되고, 이로 인해 간지럼에 대한 반응이 줄어든다는 내용. 예상치 못한 자극에 더 민감하다는 앞 내용과 연결됨.

---

### 6. [정답]

#### [해설]

감정이 지각에 미치는 영향에 대한 글로, 감정에 더 많이 영향받을수록 지각된 대상과 기대하는 대상 간에 요구되는 유사성의 정도가 낮아진다는 것이 핵심. 겁쟁이나 연인의 예시를 통해 감정적 편향이 강할수록 작은 유사성만으로도 오인이 일어남을 보여준다.
