

2027학년도 수능 대비 모의평가

1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은?

Around the turn of the twentieth century, anthropologists trained in the natural sciences began to reimagine what a science of humanity should look like and how social scientists ought to go about studying cultural groups. Some of those anthropologists insisted that one should at least spend significant time actually observing and talking to the people studied. Early ethnographers such as Franz Boas and Alfred Cort Haddon typically traveled to the remote locations where the people in question lived and spent a few weeks to a few months there. They sought out a local Western host who was familiar with the people and the area (such as a colonial official, missionary, or businessman) and found accommodations through them. Although they did at times venture into the community without a guide, they generally did not spend significant time with the local people. Thus, their observations were primarily conducted from their verandas.

- ① seeking to build long-lasting relationships with the natives
- ② participating in collaborative research with natural scientists
- ③ engaging in little direct contact with the people being studied
- ④ cooperating actively with Western hosts in the local community
- ⑤ struggling to take a wider view of the native culture examined

2. 다음 글의 제목으로 가장 적절한 것은?

There are good reasons why open-office plans have gained currency, but open offices may not be the plan of choice for all times. Instead, the right plan seems to be building a culture of change. Overly rigid habits and conventions, no matter how well-considered or well-intentioned, threaten innovation. The crucial take-away from analyzing office plans over time is that the answers keep changing. It might seem that there is a straight line of progress, but it's a myth. Surveying office spaces from the past eighty years, one can see a cycle that repeats. Comparing the offices of the 1940s with contemporary office spaces shows that they have circled back around to essentially the same style, via a period in the 1980s when partitions and cubicles were more the norm. The technologies and colors may differ, but the 1940s and 2000s plans are alike, right down to the pillars running down the middle.

- ① Why Are Open-office Plans So Cost-efficient?
- ② How to Incorporate Retro Styles into Office Spaces
- ③ An Office Divided: Why Partitions Limit Productivity
- ④ Office Designs: What Goes Around Comes Around
- ⑤ Tips for Managing Contemporary Office Spaces

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? (3점)

Trying to do everything makes multitaskers poor editors. Those who consistently attempt multitasking find it harder to ignore irrelevant information and ① to take longer moving between tasks – in other words, for all their frantic activity, they're actually wasting time. And because the brains competing memory systems store information differently, ② whatever is retained is harder for the multitasker to recall. While these energetic minds might feel that they're on top of the world of information, in reality they are at ③ its mercy. So how we work creates its own feedback loop: the more attention we try to pay to everything, ④ the less discerning we become. But when we focus, we get better at concentrating – and remembering what we did. We feel less exhausted. So monotasking – focusing on one task at a time – isn't only more efficient; it also leaves us better ⑤ able to use the knowledge we have gained.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Situational ethics is an ethical theory that takes into account the context of a situation or an act when judging whether it is ethical. Supporters of this theory willingly permit casting aside ①absolute moral standards. In the absence of a universal standard or law, what matters is the outcome or consequences; so, the end ②justifies the means. Possibly the following contrasting realities can help illustrate the application of situational ethics. In a pickup game of basketball played among friends, everyone is expected to call his or her own fouls or acknowledge knocking the ball out-of-bounds. Caring about one's friends and maybe getting to ③keep playing with the group leads to these actions. But, once an organized game is played with officials, most athletes will not admit to the same fouls or violations as the end goal of winning is more important than expressing ④concern for competitors. Situational ethics has been extended by many athletes and coaches to mean trying to get away with as many actions on the field or court as possible to ⑤abandon competitive advantages.

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

There have been psychological studies in which subjects were shown photographs of people's faces and asked to identify the expression or state of mind evinced. The results are invariably very mixed. In the 17th century the French painter and theorist Charles Le Brun drew a series of faces illustrating the various emotions that painters could be called upon to represent. What is striking about them is that . What is missing in all this is any setting or context to make the emotion determinate. We must know who this person is, who these other people are, what their relationship is, what is at stake in the scene, and the like. In real life as well as in painting we do not come across just faces; we encounter people in particular situations and our understanding of people cannot somehow be precipitated and held isolated from the social and human circumstances in which they, and we, live and breathe and have our being.

- ① all of them could be matched consistently with their intended emotions
- ② every one of them was illustrated with photographic precision
- ③ each of them definitively displayed its own social narrative
- ④ most of them would be seen as representing unique characteristics
- ⑤ any number of them could be substituted for one another without loss

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

We are famously living in the era of the attention economy, where the largest and most profitable businesses in the world are those that consume my attention. The advertising industry is literally dedicated to capturing the conscious hours of my life and selling them to someone else. It might seem magical that so many exciting and useful software systems are available to use for free, but it is now conventional wisdom that if you can't see who is paying for something that appears to be free, then _____. Our creative engagement with other people is mediated by AI-based recommendation systems that are designed to trap our attention through the process that Nick Seaver calls captology, keeping us attending to work sold by one company rather than another, replacing the freedom of personal exploration with algorithm-generated playlists or even algorithm-generated art.

- ① all of your attention has already been spent
- ② the real product being sold is you
- ③ your privacy is being violated
- ④ the public may be sponsoring you
- ⑤ you owe the benefits to your friend AI
