

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

There is no one right way to draw. Don't you believe me? Collect 100 amazing artists in a room and have them ① draw the same chair. What do you get? One hundred very different chair drawings. ② Keeping this in mind, you'll have a lot more fun drawing the unique art that comes from you. You're the only artist in the world ③ which can draw the way you do. Exploring your personal drawing styles ④ is important. Notice how you have grown or improved as you practice. Pay attention to ⑤ what you like most about your drawings.

The most noticeable human characteristic projected onto animals is ① that they can talk in human language. Physically, animal cartoon characters and toys ② made after animals are also most often deformed in such a way as to resemble humans. This is achieved by ③ showing them with humanlike facial features and deformed front legs to resemble human hands. In more recent animated movies the trend has been to show the animals in a more "natural" way. However, they still use their front legs ④ like human hands (for example, lions can pick up and lift small objects with one paw), and they still talk with an appropriate facial expression. A general strategy that is used to make the animal characters more emotionally appealing, both to children and adults, ⑤ are to give them enlarged and deformed childlike features.

*deform: 변형하다 **paw: (동물의) 발

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? (3점)

Though he probably was not the first to do it, Dutch eyeglass maker Hans Lippershey gets credit for putting two lenses on either end of a tube in 1608 and ① creating a "spyglass." Even then, it was not Lippershey but his children who discovered ② that the double lenses made a nearby weathervane look bigger. These early instruments were not ③ much more than toys because their lenses were not very strong. The first person to turn a spyglass toward the sky was an Italian mathematician and professor named Galileo Galilei. Galileo, who heard about the Dutch spyglass and began making his own, ④ realizing right away how useful the device could be to armies and sailors. As he made better and better spyglasses, which were later named telescopes, Galileo decided ⑤ to point one at the Moon.
