

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

It is important to recognise the interdependence between individual, culturally formed actions and the state of cultural integration. People work within the forms provided by the cultural patterns that they have internalised, however contradictory these may be. Ideas are worked out as logical implications or consequences of other accepted ideas, and it is in this way that cultural innovations and discoveries are possible. New ideas are discovered through logical reasoning, but such discoveries are inherent in and integral to the conceptual system and are made possible only because of the acceptance of its premises. For example, the discoveries of new prime numbers are 'real' consequences of the particular number system employed. Thus, cultural ideas show 'advances' and 'developments' because they . The cumulative work of many individuals produces a corpus of knowledge within which certain 'discoveries' become possible or more likely. Such discoveries are 'ripe' and could not have occurred earlier and are also likely to be made simultaneously by numbers of individuals. 3점

*corpus: 집적() **simultaneously: 동시에

- ① are outgrowths of previous ideas
- ② stem from abstract reasoning ability
- ③ form the basis of cultural universalism
- ④ emerge between people of the same age
- ⑤ promote individuals' innovative thinking

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Fans feel for feeling's own sake. They make meanings beyond what seems to be on offer. They build identities and experiences, and make artistic creations of their own to share with others. A person can be an individual fan, feeling an "idealized connection with a star, strong feelings of memory and nostalgia," and engaging in activities like "collecting to develop a sense of self." But, more often, individual experiences are embedded in social contexts where other people with shared attachments socialize around the object of their affections. Much of the pleasure of fandom _____. In their diaries, Bostonians of the 1800s described being part of the crowds at concerts as part of the pleasure of attendance. A compelling argument can be made that what fans love is less the object of their fandom than the attachments to (and differentiations from) one another that those affections afford.

- ① is enhanced by collaborations between global stars
- ② results from frequent personal contact with a star
- ③ deepens as fans age together with their idols
- ④ comes from being connected to other fans
- ⑤ is heightened by stars' media appearances

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Philosophy allows us to ask much broader questions than many other scientific disciplines. It is capable of looking at the bigger picture and providing important insights into the relationships between different areas of knowledge.

- (A) This means that while philosophy can provide valuable insights into theoretical concepts and broader ethical questions, it needs to be supplemented by empirical findings and experiments to reach a more comprehensive understanding.
- (B) Philosophers tend to ask questions rather than provide definitive answers, and their contributions often consist of challenging established assumptions and proposing new research approaches. However, for a more comprehensive understanding of the nature of consciousness, close collaboration between philosophy and neuroscience is required.
- (C) Philosophy is particularly important for the interdisciplinary efforts of cognitive science, where it helps to bridge gaps between different disciplines and pioneer new ways for research. Unlike scientific methods, philosophizing is a non-empirical approach that attempts to validate concepts through logical thinking and argumentation.

Norms emerge in groups as a result of people conforming to the behavior of others. Thus, the start of a norm occurs when one person acts in a particular manner in a particular situation because she thinks she ought to.

- (A) Thus, she may prescribe the behavior to them by uttering the norm statement in a prescriptive manner. Alternately, she may communicate that conformity is desired in other ways, such as by gesturing. In addition, she may threaten to sanction them for not behaving as she wishes. This will cause some to conform to her wishes and act as she acts.
- (B) But some others will not need to have the behavior prescribed to them. They will observe the regularity of behavior and decide on their own that they ought to conform. They may do so for either rational or moral reasons.
- (C) Others may then conform to this behavior for a number of reasons. The person who performed the initial action may think that others ought to behave as she behaves in situations of this sort. 3점

The problem of survival lies at the root of many of the historian's problems, for what has survived may not necessarily be more significant than what has not survived.

Historians use evidence in order to understand what happened and why it happened. In architectural history this evidence may take the form of the buildings themselves or their remains, and documents such as plans, drawings, descriptions, diaries or bills. (①) Our picture of any period of history is derived from a multitude of sources, such as the paintings, literature, deeds, buildings and other artefacts that have survived. (②) The Egyptian pyramids have survived thousands of years, but historical significance is not just a question of durability. (③) These buildings were part of a rich and diverse culture, much of which has been lost. (④) They are historical facts, but facts by themselves, even such massive facts as the pyramids, are just the first stage in any historical study, and until they have been evaluated, placed in context and interpreted, they tell us little. (⑤) Different historians may place different values on the same facts, and the discovery of new evidence may modify or change existing theories and interpretations.

Continuous emissions measurement can be costly, particularly where there are many separate sources of emissions, and for many pollution problems this may be a major disincentive to direct taxation of emissions.

Environmental taxes based directly on measured emissions can, in principle, be very precisely targeted to the policy's environmental objectives. (①) If a firm pollutes more, it pays additional tax directly in proportion to the rise in emissions. (②) The polluter thus has an incentive to reduce emissions in any manner that is less costly per unit of abatement than the tax on each unit of residual emissions. (③) The great attraction of basing the tax directly on measured emissions is that the actions the polluter can take to reduce tax liability are actions that also reduce emissions. (④) Nevertheless, the technologies available for monitoring the concentrations and flows of particular substances in waste discharges have been developing rapidly. (⑤) In the future, it may be possible to think of taxing measured emissions in a wider range of applications.

주어진 문장 Continuous emissions measurement can be costly, particularly where there are many separate sources of emissions, and for many pollution problems this may be a major disincentive to direct taxation of emissions.
