

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Education, at its best, teaches more than just knowledge. It teaches critical thinking: the ability to stop and think before acting, to avoid succumbing to emotional pressures. This is not thought control. It is the very reverse: mental liberation. Even the most advanced intellectual will be imperfect at this skill. But even imperfect possession of it _____ of being 'stimulus-driven', constantly reacting to the immediate environment, the brightest colours or loudest sounds. Being driven by heuristic responses, living by instinct and emotion all the time, is a very easy way to live, in many ways: thought is effortful, especially for the inexperienced. But emotions are also exhausting, and short-term reactions may not, in the long term, be the most beneficial for health and survival. Just as we reach for burgers for the sake of convenience, storing up the arterial fat which may one day kill us, so our reliance on feelings can do us great harm.

- ① intensifies people's danger
- ② enhances our understanding
- ③ frees a person from the burden
- ④ allows us to accept the inevitability
- ⑤ requires one to have the experience

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Giving clients sufficient opportunity to react to your designs while in progress is a key to professional success. Similarly, involving prospective building users as well as clients is even more valuable in the long run. Say your client is a large corporation, such as a health care provider. While the hospital administration may serve as your client, no doubt the perspectives of administration personnel will differ significantly from those of doctors, interns, residents, nurses, and other medical staff who use the building regularly. In addition, the experiences of patients and visitors who use the building irregularly, often as a result of life-threatening emergencies, are altogether different as well. Understanding how each type of user experiences the current medical environment as well as how each reacts to your prospective designs inevitably produces a better building. People are likely to be more satisfied with a new building or addition if they _____. For a large institution, this can translate into increased productivity on the job, reduced absenteeism, less turnover, and lower costs.

- ① have been engaged in multiple design training sessions
- ② are given the opportunity to draft a new design
- ③ have established trust with the building designers
- ④ have been consulted in the design process
- ⑤ share their perspectives on the building with each other

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant.

- (A) In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist. Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even hold the idea at all.
- (B) When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool.
- (C) We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to justify our actions, the point is that our motives are discursively available to us. They are not hidden.

| ① (A) - (C) - (B) | ② (B) - (A) - (C) |
| ③ (B) - (C) - (A) | ④ (C) - (A) - (B) |
| ⑤ (C) - (B) - (A) | |

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Spatial reference points are larger than themselves. This isn't really a paradox: landmarks are themselves, but they also define neighborhoods around themselves.

- (A) In a paradigm that has been repeated on many campuses, researchers first collect a list of campus landmarks from students. Then they ask another group of students to estimate the distances between pairs of locations, some to landmarks, some to ordinary buildings on campus.
- (B) This asymmetry of distance estimates violates the most elementary principles of Euclidean distance, that the distance from A to B must be the same as the distance from B to A. Judgments of distance, then, are not necessarily coherent.
- (C) The remarkable finding is that distances from an ordinary location to a landmark are judged shorter than distances from a landmark to an ordinary location. So, people would judge the distance from Pierre's house to the Eiffel Tower to be shorter than the distance from the Eiffel Tower to Pierre's house. Like black holes, landmarks seem to pull ordinary locations toward themselves, but ordinary places do not.

| ① (A) - (C) - (B) | ② (B) - (A) - (C) |
| ③ (B) - (C) - (A) | ④ (C) - (A) - (B) |
| ⑤ (C) - (B) - (A) | |

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

Yes, some contests are seen as world class, such as identification of the Higgs particle or the development of high temperature superconductors.

Science is sometimes described as a winner-take-all contest, meaning that there are no rewards for being second or third. This is an extreme view of the nature of scientific contests. (①) Even those who describe scientific contests in such a way note that it is a somewhat inaccurate description, given that replication and verification have social value and are common in science. (②) It is also inaccurate to the extent that it suggests that only a handful of contests exist. (③) But many other contests have multiple parts, and the number of such contests may be increasing. (④) By way of example, for many years it was thought that there would be "one" cure for cancer, but it is now realized that cancer takes multiple forms and that multiple approaches are needed to provide a cure. (⑤) There won't be one winner there will be many.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

In reality, objects do not conform to a linear lifecycle model; instead, they undergo breakdowns, await repairs, are stored away, or find themselves relegated to the basement, only to be rediscovered and repurposed later.

By their very nature, the concepts of maintenance and repair are predominantly examined from a process-oriented perspective. (①) The focus in related scholarly discourse often revolves around the lifespan or lifecycle of objects and technologies. (②) In this context, maintenance and repair are considered practices that have the potential to prolong the existence of objects, ensuring their sustained utilization over an extended period. (③) Krebs and Weber critically engage with anthropomorphic metaphors that imply a biography of things, appropriately highlighting that conventional understanding of the lifecycle of a technology, from its acquisition to its disposal from the household, provides an incomplete definition. (④) Additionally, objects may enter recycling or second-hand cycles, leading to a dynamic afterlife marked by diverse applications. (⑤) As such, the life of an object exhibits a far more complicated and adaptive path than a simplistic linear progression.
