

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

When gathering the preferences of multiple agents into one collective choice, it is easily seen that certain cases _____. For example, if there are two alternatives, a and b, and two agents such that one prefers a and the other one b, there is no deterministic way of selecting a single alternative without violating one of two basic fairness conditions known as anonymity and neutrality. Allowing lotteries as social outcomes hence seems like a necessity for impartial collective choice. Indeed, most common "deterministic" social choice functions such as plurality rule are only deterministic as long as there is no tie, which is usually resolved by drawing a lot. The use of lotteries for the selection of officials interestingly goes back to the world's first democracy in Athens, where it was widely regarded as a principal characteristic of democracy, and has recently gained increasing attention in political science.

- ① call for randomization or other means of tiebreaking
- ② demonstrate how impartial selection could be invalidated
- ③ necessitate deterministic systems of selecting voters blindly
- ④ rely upon neutral agents to establish clear selection guidelines
- ⑤ require understanding of the unpredictability inherent in democracy

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

We are famously living in the era of the attention economy, where the largest and most profitable businesses in the world are those that consume my attention. The advertising industry is literally dedicated to capturing the conscious hours of my life and selling them to someone else. It might seem magical that so many exciting and useful software systems are available to use for free, but it is now conventional wisdom that if you can't see who is paying for something that appears to be free, then _____. Our creative engagement with other people is mediated by AI-based recommendation systems that are designed to trap our attention through the process that Nick Seaver calls captology, keeping us attending to work sold by one company rather than another, replacing the freedom of personal exploration with algorithm-generated playlists or even algorithm-generated art.

- ① all of your attention has already been spent
- ② the real product being sold is you
- ③ your privacy is being violated
- ④ the public may be sponsoring you
- ⑤ you owe the benefits to your friend AI

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Darwin saw blushing as uniquely human, representing an involuntary physical reaction caused by embarrassment and self-consciousness in a social environment.

- (A) Maybe our brief loss of face benefits the long-term cohesion of the group. Interestingly, if someone blushes after making a social mistake, they are viewed in a more favourable light than those who don't blush.
- (B) If we feel awkward, embarrassed or ashamed when we are alone, we don't blush; it seems to be caused by our concern about what others are thinking of us. Studies have confirmed that simply being told you are blushing brings it on. We feel as though others can see through our skin and into our mind.
- (C) However, while we sometimes want to disappear when we involuntarily go bright red, psychologists argue that blushing actually serves a positive social purpose. When we blush, it's a signal to others that we recognize that a social norm has been broken; it is an apology for a faux pas.

When two natural bodies of water stand at different levels, building a canal between them presents a complicated engineering problem.

- (A) Then the upper gates open and the ship passes through. For downstream passage, the process works the opposite way. The ship enters the lock from the upper level, and water is pumped from the lock until the ship is in line with the lower level.
- (B) When a vessel is going upstream, the upper gates stay closed as the ship enters the lock at the lower water level. The downstream gates are then closed and more water is pumped into the basin. The rising water lifts the vessel to the level of the upper body of water.
- (C) To make up for the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an artificial water basin. It has a long rectangular shape with concrete walls and a pair of gates at each end.

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

They might be sitting still as they imagine all of this walking back and forth along their path; but they are reliving, at least in their imagination, the movement of their feet.

Researchers are studying how our everyday physical experiences in the world contribute to our understanding of mathematical concepts. (①) The experience of walking along a path, for example, can be a metaphor for thinking about arithmetic. (②) The path starts at some point 0 and as children walk along, every step takes them 1 unit further from the starting point; they can even take half steps or skip along two steps at a time. (③) If they want to imagine what it might mean to add 5 and 9, they could think of first walking 9 steps and then walking 5 more. (④) But that also helps them think about what $14 - 3$ might mean because they can imagine walking backwards. (⑤) If they close their eyes, they might even imagine the shape of the path, the smell of the trees, and the sound that is made when they step on the dried leaves.

Personal stories connect with larger narratives to generate new identities.

The growing complexity of the social dynamics determining food choices makes the job of marketers and advertisers increasingly more difficult. (①) In the past, mass production allowed for accessibility and affordability of products, as well as their wide distribution, and was accepted as a sign of progress. (②) Nowadays it is increasingly replaced by the fragmentation of consumers among smaller and smaller segments that are supposed to reflect personal preferences. (③) Everybody feels different and special and expects products serving his or her inclinations. (④) In reality, these supposedly individual preferences end up overlapping with emerging, temporary, always changing, almost tribal formations solidifying around cultural sensibilities, social identifications, political sensibilities, and dietary and health concerns. (⑤) These consumer communities go beyond national boundaries, feeding on global and widely shared repositories of ideas, images, and practices. 3점
