

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

In the post-World War II years after 1945, unparalleled economic growth fueled a building boom and a massive migration from the central cities to the new suburban areas. The suburbs were far more dependent on the automobile, signaling the shift from primary dependence on public transportation to private cars. Soon this led to the construction of better highways and freeways and the decline and even loss of public transportation. With all of these changes came a _____ of leisure. As more people owned their own homes, with more space inside and lovely yards outside, their recreation and leisure time was increasingly centered around the home or, at most, the neighborhood. One major activity of this home-based leisure was watching television. No longer did one have to ride the trolley to the theater to watch a movie; similar entertainment was available for free and more conveniently from television.

- ① downfall
- ② uniformity
- ③ restoration
- ④ privatization
- ⑤ customization

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Whatever their differences, scientists and artists begin with the same question: can you and I see the same thing the same way? If so, how? The scientific thinker looks for features of the thing that can be stripped of subjectivity — ideally, those aspects that can be quantified and whose values will thus never change from one observer to the next. In this way, he arrives at a reality independent of all observers. The artist, on the other hand, relies on the strength of her artistry to effect a marriage between her own subjectivity and that of her readers. To a scientific thinker, this must sound like magical thinking: you're saying you will imagine something so hard it'll pop into someone else's head exactly the way you envision it? The artist has sought the opposite of the scientist's observer-independent reality. She creates a reality dependent upon observers, indeed a reality in which in order for it to exist at all.

- ① human beings must participate
- ② objectivity should be maintained
- ③ science and art need to harmonize
- ④ readers remain distanced from the arts
- ⑤ she is disengaged from her own subjectivity

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Wildfire is a natural phenomenon in many Australian environments. The intentional setting of fire to manage the landscape was practised by Aboriginal people for millennia.

- (A) However, the pattern of burning that stockmen introduced was unlike previous regimes. When conditions allowed, they would set fire to the landscape as they moved their animals out for the winter. This functioned to clear woody vegetation and also stimulated new plant growth in the following spring.
- (B) Although grasses were the first kinds of plants to recolonize the burnt areas they were soon succeeded by further woody plants and shrubs. About the only strategy to prevent such regrowth was further burning essentially using fire to control the consequences of using fire.
- (C) The young shoots were a ready food source for their animals when they returned. However, the practice also tended to reinforce the scrubby growth it was intended to control.

If we take an evolutionary look at our beginnings, we see a life in which high levels of physical activity were required for survival.

- (A) There are fewer manual jobs, we do not need to travel on foot, we do not need to hunt and harvest for our food, and many domestic chores have been mechanized. While these changes have created many benefits for our longevity and quality of life, they have also created many problems.
- (B) Lack of sufficient physical activity has now been linked to at least 17 unhealthy conditions, almost all of which are chronic diseases or considered risk factors for chronic diseases. Adrienne Hardman has summarized this serious situation for public health: "Physical inactivity is a waste of human potential for health and well-being."
- (C) Even one century ago, most people needed to be physically active to work, to travel, and to take care of homes and families. Our modern world has engineered such activity out of our lives.

Also, it has become difficult for companies to develop new pesticides, even those that can have major beneficial effects and few negative effects.

Simply maintaining yields at current levels often requires new cultivars and management methods, since pests and diseases continue to evolve, and aspects of the chemical, physical, and social environment can change over several decades. (①) In the 1960s, many people considered pesticides to be mainly beneficial to mankind. (②) Developing new, broadly effective, and persistent pesticides often was considered to be the best way to control pests on crop plants. (③) Since that time, it has become apparent that broadly effective pesticides can have harmful effects on beneficial insects, which can negate their effects in controlling pests, and that persistent pesticides can damage non-target organisms in the ecosystem, such as birds and people. (④) Very high costs are involved in following all of the procedures needed to gain government approval for new pesticides. (⑤) Consequently, more consideration is being given to other ways to manage pests, such as incorporating greater resistance to pests into cultivars by breeding and using other biological control methods.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

There's a reason for that: traditionally, park designers attempted to create such a feeling by planting tall trees at park boundaries, building stone walls, and constructing other means of partition.

Parks take the shape demanded by the cultural concerns of their time. Once parks are in place, they are no inert stage — their purposes and meanings are made and remade by planners and by park users. Moments of park creation are particularly telling, however, for they reveal and actualize ideas about nature and its relationship to urban society. (①) Indeed, what distinguishes a park from the broader category of public space is the representation of nature that parks are meant to embody. (②) Public spaces include parks, concrete plazas, sidewalks, even indoor atriums. (③) Parks typically have trees, grass, and other plants as their central features. (④) When entering a city park, people often imagine a sharp separation from streets, cars, and buildings. (⑤) What's behind this idea is not only landscape architects' desire to design aesthetically suggestive park spaces, but a much longer history of Western thought that envisions cities and nature as antithetical spaces and oppositional forces.
