

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Some of the most insightful work on information seeking emphasizes "strategic self-ignorance," understood as "the use of ignorance as an excuse to engage excessively in pleasurable activities that may be harmful to one's future self." The idea here is that if people are present-biased, they might avoid information that would perhaps because it would produce guilt or shame, perhaps because it would suggest an aggregate trade-off that would counsel against engaging in such activities. St. Augustine famously said, "God give me chastity tomorrow." Present-biased agents think: "Please let me know the risks tomorrow." Whenever people are thinking about engaging in an activity with short-term benefits but long-term costs, they might prefer to delay receipt of important information. The same point might hold about information that could make people sad or mad: "Please tell me what I need to know tomorrow."

- ① highlight the value of preferred activities
- ② make current activities less attractive
- ③ cut their attachment to past activities
- ④ enable them to enjoy more activities
- ⑤ potentially become known to others

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

There has been a lot of discussion on why moths are attracted to light. The consensus seems to hold that moths are not so much attracted to lights as they are by them. The light becomes a sensory overload that disorients the insects and sends them into a holding pattern. A hypothesis called the Mach band theory suggests that moths see a dark area around a light source and head for it to escape the light. Another theory suggests that moths perceive the light coming from a source as a diffuse halo with a dark spot in the center. The moths, attempting to escape the light, fly toward that imagined "portal," bringing them closer to the source. As they approach the light, their reference point changes and they circle the light hopelessly trying to reach the portal. Everyone is familiar with moths circling their porch lights. Their flight appears to have no purpose, but they are, it is believed, trying to escape the pull of the light.

- ① warmed
- ② trapped
- ③ targeted
- ④ protected
- ⑤ rejected

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

Green products involve, in many cases, higher ingredient costs than those of mainstream products.

- (A) They'd rather put money and time into known, profitable, high-volume products that serve populous customer segments than into risky, less-profitable, low-volume products that may serve current noncustomers. Given that choice, these companies may choose to leave the green segment of the market to small niche competitors.
- (B) Even if the green product succeeds, it may cannibalize the company's higher-profit mainstream offerings. Given such downsides, companies serving mainstream consumers with successful mainstream products face what seems like an obvious investment decision.
- (C) Furthermore, the restrictive ingredient lists and design criteria that are typical of such products may make green products inferior to mainstream products on core performance dimensions (e.g., less effective cleansers). In turn, the higher costs and lower performance of some products attract only a small portion of the customer base, leading to lower economies of scale in procurement, manufacturing, and distribution.

*segment: 조각 **cannibalize: 잡아먹다 ***procurement: 조달

A good example of chaos is the magnetic pendulum sold as an executive toy. It has four magnets arranged in a square at the base and a pendulum that swings back and forth between them.

- (A) In order to produce chaos, the iteration has to be within what is called a nonlinear system. Nor are all nonlinear systems chaotic: to become so they need to be pushed beyond a certain point, called a bifurcation. Before that point is reached they may behave in a quite orderly fashion.
- (B) Release the pendulum and note the magnets that it visits, and in what order. If the pendulum is released from the same position a second time, the pattern of movement may at first be the same but soon it will become completely different. In fact, the pattern of its movement is chaotic.
- (C) No matter how much care is taken to start the pendulum in the same position, it will visit an entirely different set of points on the two occasions. Chaotic systems are generated by iteration, though not all iteration leads to chaos.

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

This makes sense from the perspective of information reliability.

The dynamics of collective detection have an interesting feature. Which cue(s) do individuals use as evidence of predator attack? In some cases, when an individual detects a predator, its best response is to seek shelter. (①) Departure from the group may signal danger to nonvigilant animals and cause what appears to be a coordinated flushing of prey from the area. (②) Studies on dark-eyed juncos (a type of bird) support the view that nonvigilant animals attend to departures of individual group mates but that the departure of multiple individuals causes a greater escape response in the nonvigilant individuals. (③) If one group member departs, it might have done so for a number of reasons that have little to do with predation threat. (④) If nonvigilant animals escaped each time a single member left the group, they would frequently respond when there was no predator (a false alarm). (⑤) On the other hand, when several individuals depart the group at the same time, a true threat is much more likely to be present.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

As winter approaches, the length of the day shortens, the temperature drops, and plants, including trees, can detect this change.

It is worth pointing out that leaves don't drop to the ground because they are dying rather, the tree initiates an active process of clever recycling called senescence. A tree, like an oak for example, would struggle to survive through a harsh winter if it retained its canopy of leaves. (①) It would risk damage from strong winter winds and would lose more water from its leaves than it could draw up from the frozen ground. (②) If it didn't blow over, it would die of thirst. (③) It signals to them that it is time to lose their leaves. (④) First, however, trees carefully suck all of the useful nutrients out of the leaves and then, with surgical precision, block up that pathway into the leaves. (⑤) That blocked pathway at the base of the leaf stem creates a weakness and, in the wind, the leaves snap off and fall to the ground.

정답 및 해설

1. [정답] ②

[해설]

이 글은 '전략적 자기-무지'에 대해 설명하며, 사람들이 미래에 해로울 수 있는 즐거운 활동을 하기 위해 의도적으로 정보를 피한다고 말한다. 그 이유는 정보가 죄책감이나 수치심을 유발하거나, 그 활동을 하지 말라고 조언할 수 있기 때문이다. 즉, 사람들은 '현재의 활동을 덜 매력적으로 만들(make current activities less attractive)' 정보를 피하려 한다.

2. [정답] ②

[해설]

The passage explains that moths are not drawn to light but are disoriented by it, causing them to fly in circles trying to escape. This state of being unable to get away from the light source due to sensory confusion is best described as being 'trapped' by it.

3. [정답] ⑤

[해설]

주어진 문장은 친환경 제품의 '높은 원가'라는 단점을 제시한다. (C)는 'Furthermore'로 연결하며 '낮은 성능'이라는 또 다른 단점을 추가하고, 이로 인해 고객층이 좁아진다고 설명한다. (B)는 'such downsides'로 (C)에서 언급된 단점들을 받아, 설사 성공하더라도 주력 상품 시장을 잠식(cannibalize)할 수 있다는 추가적인 위험을 제시하며, 이 때문에 기업들이 명백한 투자 결정에 직면한다고 말한다. (A)는 (B)에서 언급된 'investment decision'이 무엇인지 구체적으로 설명하며, 기업들이 위험한 친환경 제품 대신 기존의 수익성 높은 제품에 투자하는 것을 선호한다고 결론짓는다. 따라서 (C)-(B)-(A)의 순서가 가장 자연스럽다.

4. [정답] ③

[해설]

제시문은 카오스의 예시로 '자기 진자' 장난감을 소개한다. (B)는 '추를 놓아라(Release the pendulum)'라며 제시된 장난감으로 직접 실험하는 상황을 묘사하며, 그 움직임이 '카오스적(chaotic)'임을 보여준다. (C)는 (B)에서 관찰된 카오스적 움직임을 부연 설명하며, 카오스 시스템이 '반복(iteration)'에 의해 생성된다는 개념을 도입한다. (A)는 (C)의 마지막에 나온 '반복(iteration)'이 카오스를 만들기 위한 조건(비선형 시스템, 분기점 등)을 설명하며 이론적으로 심화시킨다. 따라서 (B)-(C)-(A) 순서가 가장 자연스럽다.

5. [정답] ③

[해설]

주어진 문장은 '이것은 정보 신뢰도의 관점에서 이치에 맞는다'이다. '이것(This)'은 앞선 내용을 가리킨다. ②번 문장에서 '여러 개체의 이탈이 더 큰 탈출 반응을 유발한다'는 연구 결과를 제시했다. 주어진 문장은 이 연구 결과가 '정보 신뢰도' 때문에 합리적이라고 설명하는 부분의 도입부 역할을 할 수 있다.

③번 문장부터는 한 개체의 이탈은 신뢰도가 낮은 정보(포식 위협과 관련 없는 여러 이유가 있을 수 있음)이고, ⑤번 문장에서는 여러 개체의 동시 이탈은 신뢰도가 높은 정보(실제 위협일 가능성이 높음)임을 구체적으로 설명한다. 따라서 ②번의 연구 결과를 제시하고, 그 이유를 설명하기 시작하는 ③번 앞에 들어가는 것이 가장 논리적이다.

6. [정답] ③

[해설]

주어진 문장은 겨울이 다가오면서 낮이 짧아지고 기온이 떨어지는 '변화'를 나무가 '감지(detect)'할 수 있다는 내용이다. 이 문장은 나무가 왜 잎을 떨어뜨려야 하는지에 대한 설명(①, ②)과, 잎을 떨어뜨리는 과정에 대한 설명(④, ⑤) 사이에 위치해야 한다. ③번 뒤의 문장 'It signals to them...'에서 대명사 'It'은 주어진 문장의 'this change'를 가리키고, 'them'은 'trees'를 가리킨다. 즉, '이 변화가 나무들에게 잎을 떨어뜨릴 시간임을 신호한다'는 흐름이 자연스럽다. 따라서 주어진 문장은 ③에 들어가는 것이 가장 적절하다.
