

## 2027학년도 수능 대비 모의평가

### 1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? (3점)

The old-fashioned method which fish samplers use ① is to watch fish near a dam and push a button each time a fish swims up the ladder. They also get to measure a fish occasionally, which involves capturing the fish in a tank that has had the oxygen sucked out of it and holding it ② captive until it stops moving. Once it's still, they can put a tape measure to it before returning it to a recuperation tank. Finally the fish gets tagged and released back onto the ladder to continue ③ its journey. More and more samplers are using electrofishing, which involves pulling an electric wire ④ attaches to a portable generator through a river. The fish are stunned and almost magically drawn to the wire, at which point samplers catch them in a net and take them to a holding place for measuring and ⑤ weighing before returning them to the stream.

Trying to do everything makes multitaskers poor editors. Those who consistently attempt multitasking find it harder to ignore irrelevant information and ① to take longer moving between tasks – in other words, for all their frantic activity, they're actually wasting time. And because the brains competing memory systems store information differently, ② whatever is retained is harder for the multitasker to recall. While these energetic minds might feel that they're on top of the world of information, in reality they are at ③ its mercy. So how we work creates its own feedback loop: the more attention we try to pay to everything, ④ the less discerning we become. But when we focus, we get better at concentrating – and remembering what we did. We feel less exhausted. So monotasking – focusing on one task at a time – isn't only more efficient; it also leaves us better ⑤ able to use the knowledge we have gained.

A good illustration of the importance of feedback is ① contained in the responses of a group of blind women interviewed by a team of Italian psychologists. They were asked ② to describe the most enjoyable experiences in their lives. For these women, many of ③ whom had been sightless since birth, the most frequently mentioned enjoyable experiences were the result of reading books in Braille, praying, and helping each other in case of sickness or other need. Of the people interviewed by the team, these blind women stressed more than anyone else the importance of receiving clear feedback as a condition for enjoying ④ what they were doing. Unable to see what was going on around them, they needed to know even more than sighted people ⑤ whether what they were trying to accomplish was actually coming to pass.
