

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

In some cases two species are so dependent upon each other ① that if one becomes extinct, the other will as well. This nearly happened with trees that ② relied on the now-extinct Dodo birds. They once roamed Mauritius, a tropical island ③ situating in the Indian Ocean. However, Dodo birds became extinct during the late 19th century. They were overhunted by humans and other animals. After they ④ disappeared, the Calvaria Tree soon stopped sprouting seeds. Scientists finally concluded that, for the seeds of the Calvaria Tree ⑤ to sprout, they needed to first be digested by the Dodo bird.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

While reflecting on the needs of organizations, leaders, and families today, we realize that one of the unique characteristics ① is inclusivity. Why? Because inclusivity supports ② what everyone ultimately wants from their relationships: collaboration. Yet the majority of leaders, organizations, and families are still using the language of the old paradigm in which one person — typically the oldest, most educated, and/or wealthiest — makes all the decisions, and their decisions rule with little discussion or inclusion of others, ③ resulting in exclusivity. Today, this person could be a director, CEO, or other senior leader of an organization. There is no need for others to present their ideas because they are considered ④ inadequate. Yet research shows that exclusivity in problem solving, even with a genius, is not as effective as inclusivity, ⑤ which everyone's ideas are heard and a solution is developed through collaboration.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

While some people brag about never farting, the truth is that everyone does it. There is a wide range of ① what is considered normal and healthy. The average person produces about 705 milliliters of gas in 24 hours. To determine these numbers, scientists recruited and asked 75 healthy adults to eat half of a can of beans, and then ② answered a questionnaire on how often and how much gas they farted out. It was found that men and women both fart about eight times a day, although ③ passing gas up to 20 times a day is normal. Large farts were most common in the hour after meals, and the subjects released half as much gas while sleeping as they ④ did while awake. Some illnesses can make you pass gas more than normal. Health conditions such as food poisoning ⑤ have increased gas as a common symptom. If you feel like you are farting more than usual, and have other symptoms, give your doctor a call to rule out other causes of gas.
