

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

The ability to think about why things work and what may be causing problems when events do not go as ① expected seems like an obvious aspect of the way we think. It is interesting that this ability to think about why things happen is one of the key abilities that separates human abilities from ② those of just about every other animal on the planet. Asking why allows people to create explanations. Issac Newton didn't just see an apple ③ fall from a tree. He used that observation to help him figure out why it fell. Your car mechanic doesn't just observe ④ that your car is not working. He figures out why it is not working using knowledge about why it usually does work properly. And anyone who has spent time with a five-year-old ⑤ knowing that children this age can test the limits of your patience by trying to get explanations for why everything works as it does.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Jack Welch is considered to be one of the USA's top business leaders. In a gesture ① that was at once symbolic and real, Welch directed the ceremonial burning of the old-fashioned GE Blue Books. The Blue Books were a series of management training manuals that told how GE managers were to get tasks ② done in the organization. Despite the fact that these books for training ③ had not been used for some 15 years, they still had great influence over the actions of GE managers. ④ Cited the need for managers to write their own answers to day-to-day management challenges, Welch swept away the old order by removing the Blue Books from the organization's culture. Now, GE managers are taught to find their own solutions rather than ⑤ look them up in a dusty old book.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Commercial airplanes generally travel airways similar to roads, although they are not physical structures. Airways have fixed widths and defined altitudes, ① which separate traffic moving in opposite directions. Vertical separation of aircraft allows some flights ② to pass over airports while other processes occur below. Air travel usually covers long distances, with short periods of intense pilot activity at takeoff and landing and long periods of lower pilot activity while in the air, the portion of the flight ③ known as the "long haul." During the "long haul" portion of a flight, pilots spend more time assessing aircraft status than ④ searching out nearby planes. This is because collisions between aircraft usually occur in the surrounding area of airports, while crashes due to aircraft malfunction ⑤ tends to occur during long-haul flight.

*altitude: 고도 **long haul: 장거리 비행
