

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

In 1936, moviegoers found the exaggerations in Charlie Chaplins film Modern Times comical; viewing them now it is easy to feel that they carry the weight of tragedy. Natures time would lose ① its struggle against machine time and the latter would go on to conquer modern society. During the long decades of the postwar generations adulthood, we disassembled the idea of a factory that Chaplin so skillfully laughed at and rebuilt it — inside ourselves. No longer is it ② necessary for humans to be swallowed by the machine; now the machine vibrates inside the humans. The late twentieth century gave rise to a temporal revolution that ③ refocused nearly all of Americas waking hours on time thought. The world might still spin on its axis as it used to do, there might still be, strictly speaking, 23 hours, 56 minutes, and 4.090 seconds in a day, but the way in ④ which those hours, minutes, and seconds were perceived was changing. People could increasingly feel that time was moving faster. The belief that we all have less time than we used to ⑤ have become so ingrained that its hard to convince people that its not true.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? (3점)

The idea that hypnosis can put the brain into a special state, ① in which the powers of memory are dramatically greater than normal, reflects a belief in a form of easily unlocked potential. But it is false. People under hypnosis generate more "memories" than they ② do in a normal state, but these recollections are as likely to be false as true. Hypnosis leads them to come up with more information, but not necessarily more accurate information. In fact, it might actually be people's beliefs in the power of hypnosis that ③ leads them to recall more things: If people believe that they should have better memory under hypnosis, they will try harder to retrieve more memories when hypnotized. Unfortunately, there's no way to know ④ whether the memories hypnotized people retrieve are true or not — unless of course we know exactly what the person should be able to remember. But if we ⑤ knew that, then we'd have no need to use hypnosis in the first place!

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

All social interactions require some common ground upon which the involved parties can coordinate their behavior. In the interdependent groups ① in which humans and other primates live, individuals must have even greater common ground to establish and maintain social relationships. This common ground is morality. This is why morality often is defined as a shared set of standards for ② judging right and wrong in the conduct of social relationships. No matter how it is conceptualized — whether as trustworthiness, cooperation, justice, or caring — morality ③ to be always about the treatment of people in social relationships. This is likely why there is surprising agreement across a wide range of perspectives ④ that a shared sense of morality is necessary to social relations. Evolutionary biologists, sociologists, and philosophers all seem to agree with social psychologists that the interdependent relationships within groups that humans depend on ⑤ are not possible without a shared morality.
