The process of job advancement in the field of sports ① is often said to be shaped like a pyramid. That is, at the wide base are many jobs with high school athletic teams, while at the narrow tip are the few, highly desired jobs with professional organizations. Thus there are many sports jobs altogether, but the competition becomes ② increasingly tough as one works their way up. The salaries of various positions reflect this pyramid model. For example, high school football coaches are typically teachers who ③ paid a little extra for their after-class work. But coaches of the same sport at big universities can earn more than \$1 million a year, causing the salaries of college presidents ④ to look small in comparison. One degree higher up is the National Football League, ⑤ where head coaches can earn many times more than their best-paid campus counterparts.

According to Pierre Pica, understanding quantities approximately in terms of estimating ratios is a universal human intuition. In fact, humans who do not have numbers have no choice but ① to see the world in this way. By contrast, understanding quantities in terms of exact numbers is not a universal intuition; it is a product of culture. The precedence of approximations and ratios over exact numbers, Pica suggests, ② is due to the fact that ratios are much more important for survival in the wild than the ability to count. ③ Faced with a group of spear-wielding adversaries, we needed to know instantly whether there were more of them than us. When we saw two trees we needed to know instantly ④ that had more fruit hanging from it. In neither case was it ⑤ necessary to enumerate every enemy or every fruit individually. The crucial thing was to be able to make quick estimates of the relative amounts.

The term *déjà vu* is French and means, literally, "already seen." Those who have experienced the feeling ① describe it as an overwhelming sense of familiarity with something that shouldn't be familiar at all. Say, for example, you are touring a cathedral in England for the first time, and suddenly it seems as if you have been in that ② very spot before. Or maybe you are having dinner with a group of friends, ③ discussed some current political topic, and you have the feeling that you've already experienced this same friends, same dinner, and same topic. The phenomenon is rather complex, and there are many different theories as to why *déjà vu* ④ happens. Some psychiatrists ascribe *déjà vu* to a mismatching in the brain ⑤ that causes the brain to mistake the present for the past. Many para-psychologists believe it is related to a past-life experience.
