

2027학년도 수능 대비 모의평가

1. (A), (B), (C)의 각 네모 안에서 어법에 맞는 표현으로 가장 적절한 것은?

In his book *Sacred Hoops*, Phil Jackson, former head coach of the Chicago Bulls, talks about his work with Michael Jordan. Jordan is (A) such / so an extraordinarily talented athlete that there isn't much that any coach could do to improve his basketball playing. So Jackson focused his efforts with Jordan on making the superstar athlete a true leader of the team. And it worked. In 1989, five years after (B) join / joining the league and the very same year Jackson became head coach of the Bulls, Jordan began to see his role not as just scoring points and blocking shots, but as a leader whose job also was to help raise the level of play of every other player on the team. Phil Jackson says that it is this contribution, Jordan's ability to help his teammates be better players, more than his superb athletic talent (C) what / that has made the Chicago Bulls the world's winningest basketball team.

- ① so join what
- ② so joining that
- ③ such join what
- ④ such joining that

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? (3점)

How you address your professors depends on many factors such as age, college culture, and their own preference. Some teachers will ask you ① to call them by their first names, especially if they're relatively young. They enjoy the informal atmosphere ② generated by having everyone in the class on the same level. Some colleges, in fact, pride themselves on having all their faculty and students on a firstname basis. But beware: one of the surest ways to upset professors ③ is to call them by their first names against their wishes. Most professors see themselves in a position of professional authority over their students ④ whom they earned by many years of study. They no more want to be called John or Maria than ⑤ does your average physician.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

One of the keys to insects' successful survival in the open air ① lies in their outer covering — a hard waxy layer that helps prevent their tiny bodies from dehydrating. To take oxygen from the air, they use narrow breathing holes in the body-segments, which take in air ② passively and can be opened and closed as needed. Instead of blood ③ containing in vessels, they have free-flowing hemolymph, which helps keep their bodies rigid, aids movement, and assists the transportation of nutrients and waste materials to the appropriate parts of the body. The nervous system is modular — in a sense, each of the body segments has ④ its own individual and autonomous brain — and some other body systems show a similar modularization. These are just a few of the many ways ⑤ in which insect bodies are structured and function completely differently from our own.

*hemolymph: 혈림프 **modular: 모듈식의(여러 개의 개별 단위로 되어 있는)
