

2027학년도 수능 대비 모의평가

1. 다음 글의 주제로 가장 적절한 것은?

One aspect of the topic of free speech rarely mentioned is that in a climate where people do not feel able to express their views, or are actively prevented from doing so, it may not be possible simply to internalize the illicit view. Many of us don't know precisely what we think until we try to express ourselves to an audience or at least a potential audience, and most thinkers develop their ideas by interacting with others who agree or disagree with what they think. While it is true that some political prisoners have written poetry in their heads, only an exceptional writer would be able to house a whole novel or a book-length work of non-fiction in their memory. Furthermore, some kinds of writing require extensive research: where a state forbids the expression of certain sorts of ideas, access to the materials needed to express those ideas in convincing form is also typically denied. Solitary confinement is an especially effective means of censorship and widely practised against dissident writers and thinkers.

- ① internalization of unlawful views through social interactions
- ② misuses of freedom of speech for promoting particular ideas
- ③ institutional arrangements to prevent the spread of illegal ideas
- ④ negative effects of free speech on the spread of anti-social ideas
- ⑤ free speech necessary for forming and developing forbidden views

2. 다음 글의 제목으로 가장 적절한 것은?

Why would people be motivated to dislike another group when that outgroup had nothing to do with the source of their frustration and anger? One explanation that has empirical support is known as scapegoat theory. This theory suggests that when an individual becomes discouraged from a particular goal, they may feel anger, irritation, or disappointment. In general, we tend to feel negatively when something prohibits us from attaining what we want. The anger or hostility we feel toward that frustrating agent may be, in many ways, similar to the negative emotion associated with ones views of a disliked outgroup. What happens then, according to the theory, is that because both the frustrating agent and the outgroup arouse similar emotions, they tend to become associated in the individuals memory. As Berkowitz and Green suggest, There is an acquired equivalence between the frustrater and the minority group which mediates the generalization of the aggressiveresponses from the former to the latter.

- ① From Irritation to Intolerance : The Roots of Failure
- ② Chasing Shadows Instead of Facing Difficult Problems
- ③ A Misplaced Target: How Frustration Can Breed Hatred
- ④ Why Is Finding a Scapegoat Harder Than It Appears?
- ⑤ Inventing Enemies to Get Rid of Political Instability

3. (A), (B), (C)의 각 네모 안에서 어법에 맞는 표현으로 가장 적절한 것은? (3점)

The nonliving participates in communication. In the communication, the nonliving plays an important role in both message and response. Take satellites, unmanned space stations, or planetary probes. Ground controllers can signal them to change their orbit day in and day out, to collect rocks hundreds of million kilometers away, or (A) destroy / to destroy themselves. More common examples include TV remote controls and answering machines. And none of these conversations need to be one-way. Machines can maintain a building's environment: ventilation, heating, cooling, humidity, lighting, and so forth. Although (B) being / having created by humans, they do so without human intervention, through a conversation between thermostats, motion detectors, hygrometers, and computers, to name a few. In sum, the nonliving is centrally involved in (C) what / which we call "conversations," not only as one of the countless links between message and response, but also as a partner in conversation.

- ① destroy being what
- ② destroy having what
- ③ to destroy being what
- ④ to destroy having which
- ⑤ to destroy being which

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Kant yielded to no one in his opposition to lying. Even if a murderer came to your door looking for a person hiding in your house, Kant held, it is not morally permissible to lie. The duty to tell the truth ① holds irrespective of the consequences. At one point, Benjamin Constant, a French contemporary of Kant's, took issue with this ② compromising stance. The duty to tell the truth only applies, Constant argued, to those who ③ deserve the truth, as surely the murderer does not. Kant replied that lying to a murderer is wrong, not because it harms him, but because it violates the very principle of right and ④ offends the human dignity of the person who lies. "To be truthful (honest) in all declarations is, therefore, a sacred and ⑤ unconditionally commanding law of reason that admits of no expediency whatsoever," Kant said.

5. 다음 글에서 전체 흐름과 관계 없는 문장은?

Consider units of measure, one kind of descriptive device we are familiar with using in physics. Spatial distances can be given in terms of feet or meters or some other unit, and the physics will be the same regardless. ① We conclude from this that physics does not prefer one unit of length over any other, and we may choose any one we like for reasons of convenience. ② We further conclude that any feature depending on that choice, such as the particular numerical value assigned to the spatial separation between two locations, is not out there in the world apart from a choice of unit. ③ Temperatures can likewise be given in terms of the Fahrenheit or Celsius or Kelvin scale, and nothing in the physics changes when we switch from one scale to another. ④ Perception of temperature can vary with humidity and wind, even at the same measured value. ⑤ We conclude that the choice of scale is an arbitrary choice in description, and that any feature that depends on that choice is scale-dependent.

6. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Have you ever noticed that when you see someone doing something annoying you tend to think it is because they are an annoying person? Rarely do you take a moment to think about the external circumstances that might lead them to this frustrating behavior. Instead you observe something, conclude that they are annoying, and move on with your day. This is just one of the many attribution errors we are prone to making. When we see someone behaving in a certain way we think it is because they always behave that way. We immediately make the assumption that they are just "that kind of person." We do this even when there is a perfectly logical external factor motivating the other person's behavior. In fact, it doesn't matter if we are aware of the situation. Even when we know about the circumstances, we overlook them and instead infer that this person always acts this way.

People tend to infer ____ (A) ____ traits from other people's behavior even when this behavior was caused by ____ (B) ____ factors.

- | (A) | | (B) | | (A) | | (B) |
|---------------|-------|---------------|--|---------------|-------|---------------|
| ① personality | | biological | | ② personality | | situational |
| ③ motivation | | situational | | ④ motivation | | psychological |
| ⑤ behavior | | psychological | | | | |
