

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

The human brain, it turns out, has shrunk in mass by about 10 percent since it ① peaked in size 15,000–30,000 years ago. One possible reason is that many thousands of years ago humans lived in a world of dangerous predators ② where they had to have their wits about them at all times to avoid being killed. Today, we have effectively domesticated ourselves and many of the tasks of survival from avoiding immediate death to building shelters to obtaining food ③ has been outsourced to the wider society. We are smaller than our ancestors too, and it is a characteristic of domestic animals ④ that they are generally smaller than their wild cousins. None of this may mean we are dumber brain size is not necessarily an indicator of human intelligence but it may mean that our brains today are wired up differently, and perhaps more efficiently, than ⑤ those of our ancestors.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

From an organizational viewpoint, one of the most fascinating examples of how any organization may contain many different types of culture ① is to recognize the functional operations of different departments within the organization. The varying departments and divisions within an organization will inevitably view any given situation from their own biased and prejudiced perspective. A department and its members will acquire "tunnel vision" which disallows them to see things as others see ② them. The very structure of organizations can create conflict. The choice of ③ whether the structure is "mechanistic" or "organic" can have a profound influence on conflict management. A mechanistic structure has a vertical hierarchy with many rules, many procedures, and many levels of management ④ involved in decision making. Organic structures are more horizontal in nature, ⑤ which decision making is less centralized and spread across the plane of the organization.

*hierarchy: 위계

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

What could be wrong with the compliment "I'm so proud of you"? Plenty. Just as it is misguided ① to offer your child false praise, it is also a mistake to reward all of his accomplishments. Although rewards sound so ② positive, they can often lead to negative consequences. It is because they can take away from the love of learning. If you consistently reward a child for her accomplishments, she starts to focus more on getting the reward than on ③ what she did to earn it. The focus of her excitement shifts from enjoying learning itself to ④ pleasing you. If you applaud every time your child identifies a letter, she may become a praise lover who eventually ⑤ become less interested in learning the alphabet for its own sake than for hearing you applaud.
