

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

In the post-World War II years after 1945, unparalleled economic growth fueled a building boom and a massive migration from the central cities to the new suburban areas. The suburbs were far more dependent on the automobile, signaling the shift from primary dependence on public transportation to private cars. Soon this led to the construction of better highways and freeways and the decline and even loss of public transportation. With all of these changes came a _____ of leisure. As more people owned their own homes, with more space inside and lovely yards outside, their recreation and leisure time was increasingly centered around the home or, at most, the neighborhood. One major activity of this home-based leisure was watching television. No longer did one have to ride the trolley to the theater to watch a movie; similar entertainment was available for free and more conveniently from television.

- ① downfall
- ② uniformity
- ③ restoration
- ④ privatization
- ⑤ customization

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

When we narrow, we're redirecting all of our computing power to the handful of processes that matter. It's as if to help with our slow Wi-Fi, we disconnect our phone and tablet, just so that our video conference call won't lag. Narrowing also helps with goal attainment. It cuts out all of the other distractions and places the most important goal front and center. When we home in, we increase motivational intensity, reinforcing that what's in front of us is what we should be after. For a brief moment, the trade-off can be worthwhile, but when we _____, we start to miss cues and signals. We get locked in on one path without being able to step back and see a better route. When we're stuck narrowed in for too long, accidents go up and performance drops. We miss hearing alarms that signal there's a problem elsewhere.

- ① get distracted by too many sources
- ② rely too heavily on digital devices
- ③ randomly switch between tasks
- ④ remain zoomed in for too long
- ⑤ fail to control our feelings

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

Norms emerge in groups as a result of people conforming to the behavior of others. Thus, the start of a norm occurs when one person acts in a particular manner in a particular situation because she thinks she ought to.

- (A) Thus, she may prescribe the behavior to them by uttering the norm statement in a prescriptive manner. Alternately, she may communicate that conformity is desired in other ways, such as by gesturing. In addition, she may threaten to sanction them for not behaving as she wishes. This will cause some to conform to her wishes and act as she acts.
- (B) But some others will not need to have the behavior prescribed to them. They will observe the regularity of behavior and decide on their own that they ought to conform. They may do so for either rational or moral reasons.
- (C) Others may then conform to this behavior for a number of reasons. The person who performed the initial action may think that others ought to behave as she behaves in situations of this sort. 3점

*sanction: 제재를 가하다

When two natural bodies of water stand at different levels, building a canal between them presents a complicated engineering problem.

- (A) Then the upper gates open and the ship passes through. For downstream passage, the process works the opposite way. The ship enters the lock from the upper level, and water is pumped from the lock until the ship is in line with the lower level.
- (B) When a vessel is going upstream, the upper gates stay closed as the ship enters the lock at the lower water level. The downstream gates are then closed and more water is pumped into the basin. The rising water lifts the vessel to the level of the upper body of water.
- (C) To make up for the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an artificial water basin. It has a long rectangular shape with concrete walls and a pair of gates at each end.

Personal stories connect with larger narratives to generate new identities.

The growing complexity of the social dynamics determining food choices makes the job of marketers and advertisers increasingly more difficult. (①) In the past, mass production allowed for accessibility and affordability of products, as well as their wide distribution, and was accepted as a sign of progress. (②) Nowadays it is increasingly replaced by the fragmentation of consumers among smaller and smaller segments that are supposed to reflect personal preferences. (③) Everybody feels different and special and expects products serving his or her inclinations. (④) In reality, these supposedly individual preferences end up overlapping with emerging, temporary, always changing, almost tribal formations solidifying around cultural sensibilities, social identifications, political sensibilities, and dietary and health concerns. (⑤) These consumer communities go beyond national boundaries, feeding on global and widely shared repositories of ideas, images, and practices. 3점

*fragmentation: 파편화 **repository: 저장소

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

Without any special legal protection for trade secrets, however, the secretive inventor risks that an employee or contractor will disclose the proprietary information.

Trade secret law aims to promote innovation, although it accomplishes this objective in a very different manner than patent protection. (①) Notwithstanding the advantages of obtaining a patent, many innovators prefer to protect their innovation through secrecy. (②) They may believe that the cost and delay of seeking a patent are too great or that secrecy better protects their investment and increases their profit. (③) They might also believe that the invention can best be utilized over a longer period of time than a patent would allow. (④) Once the idea is released, it will be "free as the air" under the background norms of a free market economy. (⑤) Such a predicament would lead any inventor seeking to rely upon secrecy to spend an inordinate amount of resources building high and impassable fences around their research facilities and greatly limiting the number of people with access to the proprietary information.
