

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Any attempt to model musical behavior or perception in a general way is filled with difficulties. With regard to models of perception, the question arises of whose perception we are trying to model — even if we confine ourselves to a particular culture and historical environment. Surely the perception of music varies greatly between listeners of different levels of training; indeed, a large part of music education is devoted to developing and enriching (and therefore likely changing) these listening processes. While this may be true, I am concerned here with fairly basic aspects of perception — particularly meter and key — which I believe are relatively consistent across listeners. Anecdotal evidence suggests, for example, that most people are able to "find the beat" in a typical folk song or classical piece. This is not to say that there is complete uniformity in this regard — there may be occasional disagreements, even among experts, as to how we hear the tonality or meter of a piece. But I believe _____. 3점

- ① our devotion to narrowing these differences will emerge
- ② fundamental musical behaviors evolve within communities
- ③ these varied perceptions enrich shared musical experiences
- ④ the commonalities between us far outweigh the differences
- ⑤ diversity rather than uniformity in musical processes counts

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

More than just having territories, animals also partition them. And this insight turned out to be particularly useful for zoo husbandry. An animal's territory has an internal arrangement that Heini Hediger compared to the inside of a person's house. Most of us assign separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep _____. To a varying extent, other animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may be set aside for waste, depending on the species of animal.

- ① an interest in close neighbors
- ② a neat functional organization
- ③ a stock of emergency supplies
- ④ a distance from potential rivals
- ⑤ a strictly observed daily routine

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect.

- (A) The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based.
- (B) Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and filtered by another consciousness.
- (C) The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind.

- ① (A) - (C) - (B)
- ③ (B) - (C) - (A)
- ⑤ (C) - (B) - (A)

- ② (B) - (A) - (C)
- ④ (C) - (A) - (B)

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant.

- (A) In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist. Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even hold the idea at all.
- (B) When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool.
- (C) We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to justify our actions, the point is that our motives are discursively available to us. They are not hidden.

- ① (A) - (C) - (B)
- ③ (B) - (C) - (A)
- ⑤ (C) - (B) - (A)

- ② (B) - (A) - (C)
- ④ (C) - (A) - (B)

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

If not, the robot might endlessly chase itself rather than the blocks.

People involved in the conception and engineering of robots designed to perceive and act know how fundamental is the ability to discriminate oneself from other entities in the environment. Without such an ability, no goal-oriented action would be possible. (①) Imagine that you have to build a robot able to search for blocks scattered in a room in order to pile them. (②) Even this simple task would require that your machine be able to discriminate between stimulation that originates from its own machinery and stimulation that originates from the blocks in the environment. (③) Suppose that you equip your robot with an artificial eye and an artificial arm to detect, grab, and pile the blocks. (④) To be successful, your machine will have to have some built-in system enabling it to discriminate between the detection of a block and the detection of its own arm. (⑤) Your robot would engage in circular, self-centered acts that would drive it away from the target or external goal.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

In reality, objects do not conform to a linear lifecycle model; instead, they undergo breakdowns, await repairs, are stored away, or find themselves relegated to the basement, only to be rediscovered and repurposed later.

By their very nature, the concepts of maintenance and repair are predominantly examined from a process-oriented perspective. (①) The focus in related scholarly discourse often revolves around the lifespan or lifecycle of objects and technologies. (②) In this context, maintenance and repair are considered practices that have the potential to prolong the existence of objects, ensuring their sustained utilization over an extended period. (③) Krebs and Weber critically engage with anthropomorphic metaphors that imply a biography of things, appropriately highlighting that conventional understanding of the lifecycle of a technology, from its acquisition to its disposal from the household, provides an incomplete definition. (④) Additionally, objects may enter recycling or second-hand cycles, leading to a dynamic afterlife marked by diverse applications. (⑤) As such, the life of an object exhibits a far more complicated and adaptive path than a simplistic linear progression.
