1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Prior to photography, _____. While painters have always lifted particular places out of their 'dwelling' and transported them elsewhere, paintings were time-consuming to produce, relatively difficult to transport and one-of-a-kind. The multiplication of photographs especially took place with the introduction of the half-tone plate in the 1880s that made possible the mechanical reproduction of photographs in newspapers, periodicals, books and advertisements. Photography became coupled to consumer capitalism and the globe was now offered 'in limitless quantities, figures, landscapes, events which had not previously been utilised either at all, or only as pictures for one customer'. With capitalism's arrangement of the world as a 'department store', 'the proliferation and circulation of representations ... achieved a spectacular and virtually inescapable global magnitude'. Gradually photographs became cheap mass-produced objects that made the world visible, aesthetic and desirable. Experiences were 'democratised' by translating them into cheap images. Light, small and mass-produced photographs became dynamic vehicles for the spatiotemporal circulation of places.

- ① paintings alone connected with nature
- ② painting was the major form of art
- ③ art held up a mirror to the world
- ④ desire for travel was not strong
- ⑤ places did not travel well

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

A musical score within any film can add an additional layer to the film text, which goes beyond simply imitating the action viewed. In films that tell of futuristic worlds, composers, much like sound designers, have added freedom to create a world that is unknown and new to the viewer. However, unlike sound designers, composers often shy away from creating unique pieces that reflect these new worlds and often present musical scores that possess familiar structures and cadences. While it is possible that this may interfere with creativity and a sense of space and time, it in fact . Through recognizable scores, visions of the future or a galaxy far, far away can be placed within a recognizable context. Such familiarity allows the viewer to be placed in a comfortable space so that the film may then lead the viewer to what is an unfamiliar, but acceptable vision of a world different from their own.

- ① frees the plot of its familiarity
- ② aids in viewer access to the film
- ③ adds to an exotic musical experience
- ④ orients audiences to the film's theme
- ⑤ inspires viewers to think more deeply

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

In the case of specialists such as art critics, a deeper familiarity with materials and techniques is often useful in reaching an informed judgement about a work.

Acknowledging the making of artworks does not require a detailed, technical knowledge of, say, how painters mix different kinds of paint, or how an image editing tool works. (①) All that is required is a general sense of a significant difference between working with paints and working with an imaging application. (②) This sense might involve a basic familiarity with paints and paintbrushes as well as a basic familiarity with how we use computers, perhaps including how we use consumer imaging apps. (③) This is because every kind of artistic material or tool comes with its own challenges and affordances for artistic creation. (④) Critics are often interested in the ways artists exploit different kinds of materials and tools for particular artistic effect. (⑤) They are also interested in the success of an artist's attempt — embodied in the artwork itself — to push the limits of what can be achieved with certain materials and tools.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

As winter approaches, the length of the day shortens, the temperature drops, and plants, including trees, can detect this change.

It is worth pointing out that leaves don't drop to the ground because they are dying — rather, the tree initiates an active process of clever recycling called senescence. A tree, like an oak for example, would struggle to survive through a harsh winter if it retained its canopy of leaves. (①) It would risk damage from strong winter winds and would lose more water from its leaves than it could draw up from the frozen ground. (②) If it didn't blow over, it would die of thirst. (③) It signals to them that it is time to lose their leaves. (④) First, however, trees carefully suck all of the useful nutrients out of the leaves and then, with surgical precision, block up that pathway into the leaves. (⑤) That blocked pathway at the base of the leaf stem creates a weakness and, in the wind, the leaves snap off and fall to the ground.
