

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

The dependent and shifting nature of art values, not only on the market but inherently, is uppermost in the mind of today's art collector, whether he buys for himself or as the representative of an institution. Acquiring a work is acquiring a piece of art history, or it is acquiring nothing (beyond, that is, an object of personal enjoyment in the same class as a cat or a souvenir). In signing his check the collector asserts his belief in the future presence of the work as a significant point attained by art as a whole. History, however, is open to anything and the merit of the chosen painting or sculpture has—at best—only the validation of a present-day consensus. This consensus is all but certain to be displaced, as others have been in the past. In the last analysis, committing himself to a painting is the collector's own act. Through it he courageously affirms not only his aesthetic judgment, from whatever source it be derived, but the conviction that ____.

- ① he can predict where art is going
- ② the artist behind the work is reliable
- ③ the art work tells the story of his time
- ④ his choice will lead to immediate profits
- ⑤ the originality of the work is unshakable

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Choosing similar friends can have a rationale. Assessing the survivability of an environment can be risky (if an environment turns out to be deadly, for instance, it might be too late by the time you find out), so humans have evolved the desire to associate with similar individuals as a way to perform this function efficiently. This is especially useful to a species that lives in so many different sorts of environments. However, the carrying capacity of a given environment _____. If resources are very limited, the individuals who live in a particular place cannot all do the exact same thing (for example, if there are few trees, people cannot all live in tree houses, or if mangoes are in short supply, people cannot all live solely on a diet of mangoes). A rational strategy would therefore sometimes be to avoid similar members of one's species.

- ① exceeds the expected demands of a community
- ② is decreased by diverse means of survival
- ③ places a limit on this strategy
- ④ makes the world suitable for individuals
- ⑤ prevents social ties in dissimilar members

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Recently, a number of commercial ventures have been launched that offer social robots as personal home assistants, perhaps eventually to rival existing smart-home assistants.

- (A) They might be motorized and can track the user around the room, giving the impression of being aware of the people in the environment. Although personal robotic assistants provide services similar to those of smart-home assistants, their social presence offers an opportunity that is unique to social robots.
- (B) Personal robotic assistants are devices that have no physical manipulation or locomotion capabilities. Instead, they have a distinct social presence and have visual features suggestive of their ability to interact socially, such as eyes, ears, or a mouth.
- (C) For instance, in addition to playing music, a social personal assistant robot would express its engagement with the music so that users would feel like they are listening to the music together with the robot. These robots can be used as surveillance devices, act as communicative intermediates, engage in richer games, tell stories, or be used to provide encouragement or incentives. 3점

Although there may be elements that trigger instinctive response, spectacle works primarily within a cultural frame and is subject to prevailing modes of perception that observers bring to bear.

- (A) By extension, spectacle is produced by working with the grain of a particular culture, blending the innovative with the established. Thus anyone deploying spectacle may draw on a repertoire of techniques and conventions developed from previous festivals or related activities, but imitation is not enough.
- (B) Spectacle must also be spectacular. A spectacle has to amaze spectators, outdoing previous efforts if it is to become part of the collective memory of those who witnessed and participated in it.
- (C) In saying that, we stress that creation of spectacle is neither a universal nor even an inevitable expression of culture, but is a strategy commonly used by people from many different cultures to address specific needs. The task of creating spectacle has been likened to creating new works of literature, where writers normally feel bound by the rules and traditions of their genre yet need to show sufficient originality to impress their audiences.

Rather, it evolved naturally as certain devices were found in practice to be both workable and useful.

Film has no grammar. (①) There are, however, some vaguely defined rules of usage in cinematic language, and the syntax of film — its systematic arrangement — orders these rules and indicates relationships among them. (②) As with written and spoken languages, it is important to remember that the syntax of film is a result of its usage, not a determinant of it. (③) There is nothing preordained about film syntax. (④) Like the syntax of written and spoken language, the syntax of film is an organic development, descriptive rather than prescriptive, and it has changed considerably over the years. (⑤) "Hollywood Grammar" may sound laughable now, but during the thirties, forties, and early fifties it was an accurate model of the way Hollywood films were constructed.

Instead, much like the young child learning how to play 'nicely', the apprentice scientist gains his or her understanding of the moral values inherent in the role by absorption from their colleagues — socialization.

As particular practices are repeated over time and become more widely shared, the values that they embody are reinforced and reproduced and we speak of them as becoming 'institutionalized'. (①) In some cases, this institutionalization has a formal face to it, with rules and protocols written down, and specialized roles created to ensure that procedures are followed correctly. (②) The main institutions of state — parliament, courts, police and so on — along with certain of the professions, exhibit this formal character. (③) Other social institutions, perhaps the majority, are not like this; science is an example. (④) Although scientists are trained in the substantive content of their discipline, they are not formally instructed in 'how to be a good scientist'. (⑤) We think that these values, along with the values that inform many of the professions, are under threat, just as the value of the professions themselves is under threat.
