

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

We are famously living in the era of the attention economy, where the largest and most profitable businesses in the world are those that consume my attention. The advertising industry is literally dedicated to capturing the conscious hours of my life and selling them to someone else. It might seem magical that so many exciting and useful software systems are available to use for free, but it is now conventional wisdom that if you can't see who is paying for something that appears to be free, then _____. Our creative engagement with other people is mediated by AI-based recommendation systems that are designed to trap our attention through the process that Nick Seaver calls captology, keeping us attending to work sold by one company rather than another, replacing the freedom of personal exploration with algorithm-generated playlists or even algorithm-generated art.

- ① all of your attention has already been spent
- ② the real product being sold is you
- ③ your privacy is being violated
- ④ the public may be sponsoring you
- ⑤ you owe the benefits to your friend AI

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

News, especially in its televised form, is constituted not only by its choice of topics and stories but by its _____. Presentational styles have been subject to a tension between an informational-educational purpose and the need to engage us entertainingly. While current affairs programmes are often 'serious' in tone sticking to the 'rules' of balance, more popular programmes adopt a friendly, lighter, idiom in which we are invited to consider the impact of particular news items from the perspective of the 'average person in the street'. Indeed, contemporary news construction has come to rely on an increased use of faster editing tempos and 'flashier' presentational styles including the use of logos, sound-bites, rapid visual cuts and the 'star quality' of news readers. Popular formats can be said to enhance understanding by engaging an audience unwilling to endure the longer verbal orientation of older news formats. However, they arguably work to reduce understanding by failing to provide the structural contexts for news events.

- ① coordination with traditional display techniques
- ② prompt and full coverage of the latest issues
- ③ educational media contents favoured by producers
- ④ commitment to long-lasting news standards
- ⑤ verbal and visual idioms or modes of address

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? (3점)

A good example of chaos is the magnetic pendulum sold as an executive toy. It has four magnets arranged in a square at the base and a pendulum that swings back and forth between them.

- (A) In order to produce chaos, the iteration has to be within what is called a nonlinear system. Nor are all nonlinear systems chaotic: to become so they need to be pushed beyond a certain point, called a bifurcation. Before that point is reached they may behave in a quite orderly fashion.
- (B) Release the pendulum and note the magnets that it visits, and in what order. If the pendulum is released from the same position a second time, the pattern of movement may at first be the same but soon it will become completely different. In fact, the pattern of its movement is chaotic.
- (C) No matter how much care is taken to start the pendulum in the same position, it will visit an entirely different set of points on the two occasions. Chaotic systems are generated by iteration, though not all iteration leads to chaos.

The most commonly known form of results-based pricing is a practice called contingency pricing, used by lawyers.

- (A) Therefore, only an outcome in the client's favor is compensated. From the client's point of view, the pricing makes sense in part because most clients in these cases are unfamiliar with and possibly intimidated by law firms. Their biggest fears are high fees for a case that may take years to settle.
- (B) By using contingency pricing, clients are ensured that they pay no fees until they receive a settlement. In these and other instances of contingency pricing, the economic value of the service is hard to determine before the service, and providers develop a price that allows them to share the risks and rewards of delivering value to the buyer.
- (C) Contingency pricing is the major way that personal injury and certain consumer cases are billed. In this approach, lawyers do not receive fees or payment until the case is settled, when they are paid a percentage of the money that the client receives. 3점

Because the manipulation of digitally converted sounds meant the reprogramming of binary information, editing operations could be performed with millisecond precision.

The shift from analog to digital technology significantly influenced how music was produced. First and foremost, the digitization of sounds — that is, their conversion into numbers — enabled music makers to undo what was done. (①) One could, in other words, twist and bend sounds toward something new without sacrificing the original version. (②) This "undo" ability made mistakes considerably less momentous, sparking the creative process and encouraging a generally more experimental mindset. (③) In addition, digitally converted sounds could be manipulated simply by programming digital messages rather than using physical tools, simplifying the editing process significantly. (④) For example, while editing once involved razor blades to physically cut and splice audiotapes, it now involved the cursor and mouse-click of the computer-based sequencer program, which was obviously less time consuming. (⑤) This microlevel access at once made it easier to conceal any traces of manipulations (such as joining tracks in silent spots) and introduced new possibilities for manipulating sounds in audible and experimental ways.

This makes sense from the perspective of information reliability.

The dynamics of collective detection have an interesting feature. Which cue(s) do individuals use as evidence of predator attack? In some cases, when an individual detects a predator, its best response is to seek shelter. (①) Departure from the group may signal danger to nonvigilant animals and cause what appears to be a coordinated flushing of prey from the area. (②) Studies on dark-eyed juncos (a type of bird) support the view that nonvigilant animals attend to departures of individual group mates but that the departure of multiple individuals causes a greater escape response in the nonvigilant individuals. (③) If one group member departs, it might have done so for a number of reasons that have little to do with predation threat. (④) If nonvigilant animals escaped each time a single member left the group, they would frequently respond when there was no predator (a false alarm). (⑤) On the other hand, when several individuals depart the group at the same time, a true threat is much more likely to be present.
