

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

Over the last decade the attention given to how children learn to read has foregrounded the nature of textuality, and of the different, interrelated ways in which readers of all ages make texts mean. 'Reading' now applies to a greater number of representational forms than at any time in the past: pictures, maps, screens, design graphics and photographs are all regarded as text. In addition to the innovations made possible in picture books by new printing processes, design features also predominate in other kinds, such as books of poetry and information texts. Thus, reading becomes a more complicated kind of interpretation than it was when children's attention was focused on the printed text, with sketches or pictures as an adjunct. Children now learn from a picture book that words and illustrations complement and enhance each other. Reading is not simply . Even in the easiest texts, what a sentence 'says' is often not what it means.

- ① knowledge acquisition
- ② word recognition
- ③ imaginative play
- ④ subjective interpretation
- ⑤ image mapping

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Although empathy is widely praised by scholars and public figures, not everyone is an empathy booster. Critics of empathy argue that empathy will not save us from interpersonal and intergroup conflict. In fact, they argue, empathy makes such conflicts worse. These critics maintain that empathy can be exhausting and lead to burnout, insensitivity to suffering, or worse. They argue that we tend to empathize strongly with our in-group and resist empathizing with out-groups, and even enjoy the suffering of out-groups in competitive or threatening contexts. Thus, the prescription for more empathy _____. Empathy, they argue, can further entrench conflict and force us into an us vs. them mentality. Finally, even when we try to empathize with others who are dissimilar from us or in unfamiliar contexts, sometimes we are unable to accurately empathize with their experiences, causing further misunderstandings and frustration. Critics of empathy argue that we should give up on empathy and employ other tools in pursuit of social harmony, e.g., rational compassion or moral emotions like fear, anger, and shame.

- ① underestimates the invisible conflicts possible within a group
- ② is triggered by the need for solutions to emotional conflicts
- ③ is often counterproductive in cases of conflict
- ④ functions as a facilitator in the resolution of social disharmony
- ⑤ raises questions about negative attitudes toward social disharmony

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

A fascinating species of water flea exhibits a kind of flexibility that evolutionary biologists call adaptive plasticity.

- (A) That's a clever trick, because producing spines and a helmet is costly, in terms of energy, and conserving energy is essential for an organism's ability to survive and reproduce. The water flea only expends the energy needed to produce spines and a helmet when it needs to.
- (B) If the baby water flea is developing into an adult in water that includes the chemical signatures of creatures that prey on water fleas, it develops a helmet and spines to defend itself against predators. If the water around it doesn't include the chemical signatures of predators, the water flea doesn't develop these protective devices.
- (C) So it may well be that this plasticity is an adaptation: a trait that came to exist in a species because it contributed to reproductive fitness. There are many cases, across many species, of adaptive plasticity. Plasticity is conducive to fitness if there is sufficient variation in the environment.

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

In the fifth century B.C.E., the Greek philosopher Protagoras pronounced, "Man is the measure of all things." In other words, we feel entitled to ask the world, "What good are you?"

- (A) Abilities said to "make us human" — empathy, communication, grief, toolmaking, and so on — all exist to varying degrees among other minds sharing the world with us. Animals with backbones (fishes, amphibians, reptiles, birds, and mammals) all share the same basic skeleton, organs, nervous systems, hormones, and behaviors.
- (B) We assume that we are the world's standard, that all things should be compared to us. Such an assumption makes us overlook a lot.
- (C) Just as different models of automobiles each have an engine, drive train, four wheels, doors, and seats, we differ mainly in terms of our outside contours and a few internal tweaks. But like naive car buyers, most people see only animals' varied exteriors.

*contour: 윤곽, 외형 **tweak: 조정, 개조

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

Also, it has become difficult for companies to develop new pesticides, even those that can have major beneficial effects and few negative effects.

Simply maintaining yields at current levels often requires new cultivars and management methods, since pests and diseases continue to evolve, and aspects of the chemical, physical, and social environment can change over several decades. (①) In the 1960s, many people considered pesticides to be mainly beneficial to mankind. (②) Developing new, broadly effective, and persistent pesticides often was considered to be the best way to control pests on crop plants. (③) Since that time, it has become apparent that broadly effective pesticides can have harmful effects on beneficial insects, which can negate their effects in controlling pests, and that persistent pesticides can damage non-target organisms in the ecosystem, such as birds and people. (④) Very high costs are involved in following all of the procedures needed to gain government approval for new pesticides. (⑤) Consequently, more consideration is being given to other ways to manage pests, such as incorporating greater resistance to pests into cultivars by breeding and using other biological control methods.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

When the team painted fireflies' light organs dark, a new set of bats took twice as long to learn to avoid them.

Fireflies don't just light up their behinds to attract mates, they also glow to tell bats not to eat them. This twist in the tale of the trait that gives fireflies their name was discovered by Jesse Barber and his colleagues. The glow's warning role benefits both fireflies and bats, because these insects taste disgusting to the mammals. (①) When swallowed, chemicals released by fireflies cause bats to throw them back up. (②) The team placed eight bats in a dark room with three or four fireflies plus three times as many tasty insects, including beetles and moths, for four days. (③) During the first night, all the bats captured at least one firefly. (④) But by the fourth night, most bats had learned to avoid fireflies and catch all the other prey instead. (⑤) It had long been thought that firefly bioluminescence mainly acted as a mating signal, but the new finding explains why firefly larvae also glow despite being immature for mating.
