Concepts of nature are always cultural statements. This may not strike Europeans as much of an insight, for Europe's landscape is so much of a blend. But in the new worlds —'new' at least to Europeans — the distinction appeared much clearer not only to European settlers and visitors but also to their descendants. For that reason, they had the fond conceit of primeval nature uncontrolled by human associations which could later find expression in an admiration for wilderness. Ecological relationships certainly have their own logic and in this sense 'nature' can be seen to have a self-regulating but not necessarily stable dynamic independent of human intervention. But the context for ecological interactions . We may not determine how or what a lion eats but we certainly can regulate where the lion feeds.

- ① has supported new environment-friendly policies
- ② has increasingly been set by humanity
- ③ inspires creative cultural practices
- ④ changes too frequently to be regulated
- ⑤ has been affected by various natural conditions

A large part of what we see is what we expect to see. This explains why we "see" faces and figures in a flickering campfire, or in moving clouds. This is why Leonardo da Vinci advised artists to discover their motifs by staring at patches on a blank wall. A fire provides a constant flickering change in visual information that never integrates into anything solid and thereby allows the brain to engage in a play of hypotheses. On the other hand, the wall does not present us with very much in the way of visual clues, and so the brain begins to make more and more hypotheses and desperately searches for confirmation. A crack in the wall looks a little like the profile of a nose and suddenly a whole face appears, or a leaping horse, or a dancing figure. In cases like these the brain's visual strategies are _____.

- ① ignoring distracting information unrelated to visual clues
- ② projecting images from within the mind out onto the world
- ③ categorizing objects into groups either real or imagined
- ④ strengthening connections between objects in the real world
- ⑤ removing the broken or missing parts of an original image

If learning were simply a matter of accumulating lists of facts, then it shouldn't make any difference if we are presented with information that is just a little bit beyond what we already know or totally new information.

- (A) If we are trying to understand something totally new, however, we need to make larger adjustments to the units of the patterns we already have, which requires changing the strengths of large numbers of connections in our brain, and this is a difficult, tiring process.
- (B) The adjustments are clearly smallest when the new information is only slightly new — when it is compatible with what we already know, so that the old patterns need only a little bit of adjustment to accommodate the new knowledge.
- (C) Each fact would simply be stored separately. According to connectionist theory, however, our knowledge is organized into patterns of activity, and each time we learn something new we have to modify the old patterns so as to keep the old material while adding the new information.

Traditionally, when teachers teach writing, they assign topics for students to write on; perhaps they do a bit of brainstorming about the topic during a pre-writing phase, and then have students write about the topic without interruption.

- (A) In process writing, on the other hand, students may initially brainstorm ideas about a topic and begin writing, but then they have repeated conferences with the teacher and the other students, during which they receive feedback on their writing up to that point, make revisions, based on the feedback they receive, and carry on writing.
- (B) In this way, students learn to view their writing as someone else's reading and to improve both the expression of meaning and the form of their writing as they draft and redraft. Process writing shifts the emphasis in teaching writing from evaluation to revision.
- (C) Subsequently, teachers collect and evaluate what students have written. Such instruction is very 'product-oriented;' there is no involvement of the teacher in the act or 'process' of writing.

This means that there are numerous routes to the same destination.

Note that copyright covers the expression of an idea and not the idea itself. (①) Designers draw on their experience of design when approaching a new project. This includes the use of previous designs that they know work, and also designs that they have seen and that have been successful. (②) Others' creations often spark inspiration that also leads to new ideas and innovation. (③) This is well known and understood. (④) However, the expression of an idea is protected by copyright, and people who infringe on that right can be taken to court and prosecuted. (⑤) For example, for a smartwatch, there are numerous ways that the idea has been expressed in different ways and it is the expression that has been copyrighted.

It was also within the range of reds that they learned early on to diversify the palette and to produce varied tones and shades, as the oldest known color terms demonstrate.

For thousands of years in the West, red was the only color worthy of that name, the only true color. As much on the historical as hierarchical level, it exceeded all others. (①) Not that they did not exist, but they had to wait a long time before they were considered colors and then played a comparable role in material culture, social codes, and systems of thought. (②) It was with red that humans did their first color experiments, achieved their first successes, and then constructed a chromatic universe. (③) Here the lexicon seems in keeping with pictorial practices and coloring techniques. (④) In certain languages, the same word can mean "red" or simply "colored," depending on the context, such as coloratus in classical Latin or colorado in modern Castilian. (⑤) In other languages, the words meaning "red" and "beautiful" share a common root; for example, that is the case in Russian, in which the terms krasnyy (red) and krasivy (beautiful) belong to the same lexical family.

글은 자연에 대한 개념이 문화적이라고 말하며, 인간의 개입이 없는 원시 자연이라는 생각은 유럽인들의 관념이라고 설명한다. 하지만 마지막 문장에서 '우리가 사자가 무엇을 먹는지는 결정할 수 없지만, 사자가 어디서 먹는지는 확실히 규제할 수 있다'는 예시를 통해, 생태학적 상호작용이 일어나는 '맥락(context)'이 인간에 의해 설정되고 있음을 보여준다. 따라서 빈칸에는 '인류에 의해 점점 더 설정되어 왔다'는 내용이 들어가야 한다.

2. [정답] ②

이 글은 우리가 보는 것의 상당 부분이 우리가 기대하는 것이라는 전제에서 시작합니다. 모닥불, 구름, 벽의 얼룩처럼 시각적 단서가 모호할 때, 뇌는 가설을 세우고(engage in a play of hypotheses), 스스로 이미지를 만들어냅니다. 즉, 뇌 속의 이미지를 외부 세계에 투영하는 것입니다. 따라서 빈칸에는 'projecting images from within the mind out onto the world'가 가장 적절합니다.

The initial statement presents a hypothetical view of learning. (C) introduces the contrasting 'connectionist theory,' which serves as the main framework for the explanation. (B) then elaborates on one aspect of this theory – how patterns are adjusted for 'slightly new' information. (A) uses 'however' to contrast this with the more difficult process of adjusting for 'totally new' information, completing the comparison.

4. [정답] ⑤

주어진 글은 전통적인 '결과 중심(product-oriented)' 글쓰기 교육을 설명한다. (C)는 'Subsequently(그 후에)'로 시작하며 전통적 방식의 마지막 단계(교사가 결과물을 수거하고 평가)를 설명하고, 'product-oriented'라는 용어를 도입하며 자연스럽게 이어진다. (A)는 'on the other hand'로 시작하며 (C)에서 언급된 전통적 방식과 대조되는 '과정 중심(process writing)' 글쓰기를 소개한다. (B)는 'In this way'로 시작하며 (A)에서 설명한 과정 중심 글쓰기의 결과와 의의(평가에서 수정으로의 강조점 이동)를 요약한다. 따라서 (C)-(A)-(B) 순서가 가장 논리적이다.

5. [정답] ⑤

제시문은 '이것은 같은 목적지로 가는 수많은 길이 있다는 것을 의미한다'는 내용입니다. 여기서 '이것 (This)'은 앞선 내용을 가리키며, '같은 목적지'는 '아이디어', '수많은 길'은 '표현'을 비유합니다. 본문에서 ⑤ 앞 문장은 아이디어의 '표현'이 저작권으로 보호된다는 원칙을 설명합니다. 제시문은 이 원칙을 비유적으로 설명하며, ⑤ 뒤의 스마트워치 예시(하나의 아이디어, 다양한 표현)를 자연스럽게 연결하는 다리 역할을 합니다. 따라서 ⑤가 가장 적절한 위치입니다.

6. [정답]

주어진 문장은 '가장 오래된 색채 용어들이 이를 증명한다(as the oldest known color terms demonstrate)'며 어휘(lexicon) 증거를 언급한다. 이는 바로 뒤에 나오는 '여기서 어휘 목록은 그림 기법과 일치하는 것으로 보인다(Here the lexicon seems in keeping with...)'는 문장과 자연스럽게 연결되므로, ③에 삽입되어야 한다.
