

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Concepts of nature are always cultural statements. This may not strike Europeans as much of an insight, for Europe's landscape is so much of a blend. But in the new worlds —'new' at least to Europeans — the distinction appeared much clearer not only to European settlers and visitors but also to their descendants. For that reason, they had the fond conceit of primeval nature uncontrolled by human associations which could later find expression in an admiration for wilderness. Ecological relationships certainly have their own logic and in this sense 'nature' can be seen to have a self-regulating but not necessarily stable dynamic independent of human intervention. But the context for ecological interactions . We may not determine how or what a lion eats but we certainly can regulate where the lion feeds.

- ① has supported new environment-friendly policies
- ② has increasingly been set by humanity
- ③ inspires creative cultural practices
- ④ changes too frequently to be regulated
- ⑤ has been affected by various natural conditions

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

A large part of what we see is what we expect to see. This explains why we "see" faces and figures in a flickering campfire, or in moving clouds. This is why Leonardo da Vinci advised artists to discover their motifs by staring at patches on a blank wall. A fire provides a constant flickering change in visual information that never integrates into anything solid and thereby allows the brain to engage in a play of hypotheses. On the other hand, the wall does not present us with very much in the way of visual clues, and so the brain begins to make more and more hypotheses and desperately searches for confirmation. A crack in the wall looks a little like the profile of a nose and suddenly a whole face appears, or a leaping horse, or a dancing figure. In cases like these the brain's visual strategies are _____.

- ① ignoring distracting information unrelated to visual clues
- ② projecting images from within the mind out onto the world
- ③ categorizing objects into groups either real or imagined
- ④ strengthening connections between objects in the real world
- ⑤ removing the broken or missing parts of an original image

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

If learning were simply a matter of accumulating lists of facts, then it shouldn't make any difference if we are presented with information that is just a little bit beyond what we already know or totally new information.

- (A) If we are trying to understand something totally new, however, we need to make larger adjustments to the units of the patterns we already have, which requires changing the strengths of large numbers of connections in our brain, and this is a difficult, tiring process.
- (B) The adjustments are clearly smallest when the new information is only slightly new — when it is compatible with what we already know, so that the old patterns need only a little bit of adjustment to accommodate the new knowledge.
- (C) Each fact would simply be stored separately. According to connectionist theory, however, our knowledge is organized into patterns of activity, and each time we learn something new we have to modify the old patterns so as to keep the old material while adding the new information.

4. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Traditionally, when teachers teach writing, they assign topics for students to write on; perhaps they do a bit of brainstorming about the topic during a pre-writing phase, and then have students write about the topic without interruption.

- (A) In process writing, on the other hand, students may initially brainstorm ideas about a topic and begin writing, but then they have repeated conferences with the teacher and the other students, during which they receive feedback on their writing up to that point, make revisions, based on the feedback they receive, and carry on writing.
- (B) In this way, students learn to view their writing as someone else's reading and to improve both the expression of meaning and the form of their writing as they draft and redraft. Process writing shifts the emphasis in teaching writing from evaluation to revision.
- (C) Subsequently, teachers collect and evaluate what students have written. Such instruction is very 'product-oriented;' there is no involvement of the teacher in the act or 'process' of writing.

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

This means that there are numerous routes to the same destination.

Note that copyright covers the expression of an idea and not the idea itself. (①) Designers draw on their experience of design when approaching a new project. This includes the use of previous designs that they know work, and also designs that they have seen and that have been successful. (②) Others' creations often spark inspiration that also leads to new ideas and innovation. (③) This is well known and understood. (④) However, the expression of an idea is protected by copyright, and people who infringe on that right can be taken to court and prosecuted. (⑤) For example, for a smartwatch, there are numerous ways that the idea has been expressed in different ways and it is the expression that has been copyrighted.

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

It was also within the range of reds that they learned early on to diversify the palette and to produce varied tones and shades, as the oldest known color terms demonstrate.

For thousands of years in the West, red was the only color worthy of that name, the only true color. As much on the historical as hierarchical level, it exceeded all others. (①) Not that they did not exist, but they had to wait a long time before they were considered colors and then played a comparable role in material culture, social codes, and systems of thought. (②) It was with red that humans did their first color experiments, achieved their first successes, and then constructed a chromatic universe. (③) Here the lexicon seems in keeping with pictorial practices and coloring techniques. (④) In certain languages, the same word can mean "red" or simply "colored," depending on the context, such as coloratus in classical Latin or colorado in modern Castilian. (⑤) In other languages, the words meaning "red" and "beautiful" share a common root; for example, that is the case in Russian, in which the terms krasnyy (red) and krasivy (beautiful) belong to the same lexical family.
