

2027학년도 수능 대비 모의평가

1. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Education, at its best, teaches more than just knowledge. It teaches critical thinking: the ability to stop and think before acting, to avoid succumbing to emotional pressures. This is not thought control. It is the very reverse: mental liberation. Even the most advanced intellectual will be imperfect at this skill. But even imperfect possession of it _____ of being 'stimulus-driven', constantly reacting to the immediate environment, the brightest colours or loudest sounds. Being driven by heuristic responses, living by instinct and emotion all the time, is a very easy way to live, in many ways: thought is effortful, especially for the inexperienced. But emotions are also exhausting, and short-term reactions may not, in the long term, be the most beneficial for health and survival. Just as we reach for burgers for the sake of convenience, storing up the arterial fat which may one day kill us, so our reliance on feelings can do us great harm.

- ① intensifies people's danger
- ② enhances our understanding
- ③ frees a person from the burden
- ④ allows us to accept the inevitability
- ⑤ requires one to have the experience

2. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

In labor-sharing groups, people contribute labor to other people on a regular basis (for seasonal agricultural work such as harvesting) or on an irregular basis (in the event of a crisis such as the need to rebuild a barn damaged by fire). Labor sharing groups are part of what has been called a "moral economy" since no one keeps formal records on how much any family puts in or takes out. Instead, accounting is . The group has a sense of moral community based on years of trust and sharing. In a certain community of North America, labor sharing is a major economic factor of social cohesion. When a family needs a new barn or faces repair work that requires group labor, a barn-raising party is called. Many families show up to help. Adult men provide manual labor, and adult women provide food for the event. Later, when another family needs help, they call on the same people.

- ① legally established
- ② regularly reported
- ③ socially regulated
- ④ manually calculated
- ⑤ carefully documented

3. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Studies of people struggling with major health problems show that the majority of respondents report they derived benefits from their adversity. Stressful events sometimes force people to develop new skills, reevaluate priorities, learn new insights, and acquire new strengths.

- (A) High levels of adversity predicted poor mental health, as expected, but people who had faced intermediate levels of adversity were healthier than those who experienced little adversity, suggesting that moderate amounts of stress can foster resilience. A follow-up study found a similar link between the amount of lifetime adversity and subjects' responses to laboratory stressors.
- (B) Intermediate levels of adversity were predictive of the greatest resilience. Thus, having to deal with a moderate amount of stress may build resilience in the face of future stress.
- (C) In other words, the adaptation process initiated by stress can lead to personal changes for the better. One study that measured participants' exposure to thirty-seven major negative events found a curvilinear relationship between lifetime adversity and mental health.

The fruit ripening process brings about the softening of cell walls, sweetening and the production of chemicals that give colour and flavour. The process is induced by the production of a plant hormone called ethylene.

- (A) If ripening could be slowed down by interfering with ethylene production or with the processes that respond to ethylene, fruit could be left on the plant until it was ripe and full of flavour but would still be in good condition when it arrived at the supermarket shelf.
- (B) In some countries they are then sprayed with ethylene before sale to the consumer to induce ripening. However, fruit picked before it is ripe has less flavour than fruit picked ripe from the plant. Biotechnologists therefore saw an opportunity in delaying the ripening and softening process in fruit.
- (C) The problem for growers and retailers is that ripening is followed sometimes quite rapidly by deterioration and decay and the product becomes worthless. Tomatoes and other fruits are, therefore, usually picked and transported when they are unripe. 3점

5. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

As long as the irrealism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy. (①) This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. (②) Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. (③) And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. (④) But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. (⑤) As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide."

6. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오. (3점)

This is particularly true since one aspect of sleep is decreased responsiveness to the environment.

The role that sleep plays in evolution is still under study. (①) One possibility is that it is an advantageous adaptive state of decreased metabolism for an animal when there are no more pressing activities. (②) This seems true for deeper states of inactivity such as hibernation during the winter when there are few food supplies, and a high metabolic cost to maintaining adequate temperature. (③) It may be true in daily situations as well, for instance for a prey species to avoid predators after dark. (④) On the other hand, the apparent universality of sleep, and the observation that mammals such as cetaceans have developed such highly complex mechanisms to preserve sleep on at least one side of the brain at a time, suggests that sleep additionally provides some vital service(s) for the organism. (⑤) If sleep is universal even when this potential price must be paid, the implication may be that it has important functions that cannot be obtained just by quiet, wakeful resting.
