The critic who wants to write about literature from a formalist perspective must first be a close and careful reader who examines all the elements of a text individually and questions how they come together to create a work of art. Such a reader, who respects the autonomy of a work, achieves an understanding of it by _____. Instead of examining historical periods, author biographies, or literary styles, for example, he or she will approach a text with the assumption that it is a self-contained entity and that he or she is looking for the governing principles that allow the text to reveal itself. For example, the correspondences between the characters in James Joyce's short story "Araby" and the people he knew personally may be interesting, but for the formalist they are less relevant to understanding how the story creates meaning than are other kinds of information that the story contains within itself.

- ① putting himself or herself both inside and outside it
- ② finding a middle ground between it and the world
- ③ searching for historical realities revealed within it
- ④ looking inside it, not outside it or beyond it
- ⑤ exploring its characters' cultural relevance

Emma Brindley has investigated the responses of European robins to the songs of neighbors and strangers. Despite the large and complex song repertoire of European robins, they were able to discriminate between the songs of neighbors and strangers. When they heard a tape recording of a stranger, they began to sing sooner, sang more songs, and overlapped their songs with the playback more often than they did on hearing a neighbor's song. As Brindley suggests, the overlapping of song may be an aggressive response. However, this difference in responding to neighbor versus stranger occurred only when the neighbor's song was played by a loudspeaker placed at the boundary between that neighbor's territory and the territory of the bird being tested. If the same neighbor's song was played at another boundary, one separating the territory of the test subject from another neighbor, it was treated as the call of a stranger. Not only does this result demonstrate that , but it also shows that the choice of songs used in playback experiments is highly important.

- ① variety and complexity characterize the robins' songs
- ② song volume affects the robins' aggressive behavior
- ③ the robins' poor territorial sense is a key to survival
- ④ the robins associate locality with familiar songs
- ⑤ the robins are less responsive to recorded songs

Spatial reference points are larger than themselves. This isn't really a paradox: landmarks are themselves, but they also define neighborhoods around themselves.

- (A) In a paradigm that has been repeated on many campuses, researchers first collect a list of campus landmarks from students. Then they ask another group of students to estimate the distances between pairs of locations, some to landmarks, some to ordinary buildings on campus.
- (B) This asymmetry of distance estimates violates the most elementary principles of Euclidean distance, that the distance from A to B must be the same as the distance from B to A. Judgments of distance, then, are not necessarily coherent.
- (C) The remarkable finding is that distances from an ordinary location to a landmark are judged shorter than distances from a landmark to an ordinary location. So, people would judge the distance from Pierre's house to the Eiffel Tower to be shorter than the distance from the Eiffel Tower to Pierre's house. Like black holes, landmarks seem to pull ordinary locations toward themselves, but ordinary places do not.

It can be difficult to decide the place of fine art, such as oil paintings, watercolours, sketches or sculptures, in an archival institution.

- (A) The best archival decisions about art do not focus on territoriality (this object belongs in my institution even though I do not have the resources to care for it) or on questions of monetary value or prestige (this object raises the cultural standing of my institution). The best decisions focus on what evidential value exists and what is best for the item.
- (B) But art can also carry aesthetic value, which elevates the job of evaluation into another realm. Aesthetic value and the notion of artistic beauty are important considerations, but they are not what motivates archival preservation in the first instance.
- (C) Art can serve as documentary evidence, especially when the items were produced before photography became common. Sketches of soldiers on a battlefield, paintings of English country villages or portraits of Dutch townspeople can provide the only visual evidence of a long-ago place, person or time.

The problem of survival lies at the root of many of the historian's problems, for what has survived may not necessarily be more significant than what has not survived.

Historians use evidence in order to understand what happened and why it happened. In architectural history this evidence may take the form of the buildings themselves or their remains, and documents such as plans, drawings, descriptions, diaries or bills. (①) Our picture of any period of history is derived from a multitude of sources, such as the paintings, literature, deeds, buildings and other artefacts that have survived. (②) The Egyptian pyramids have survived thousands of years, but historical significance is not just a question of durability. (③) These buildings were part of a rich and diverse culture, much of which has been lost. (④) They are historical facts, but facts by themselves, even such massive facts as the pyramids, are just the first stage in any historical study, and until they have been evaluated, placed in context and interpreted, they tell us little. (⑤) Different historians may place different values on the same facts, and the discovery of new evidence may modify or change existing theories and interpretations.

But cute and beautiful designs also have downsides.

Research finds that people show a strong visceral interest in and desire to approach and own cute-looking and beautiful (elegant) designs. (①) However, cute and beautiful designs elicit two very different motivations. (②) A cute product or package design elicits a nurturing motivation — a desire to take care of and keep the product, to hold it dear to our hearts and never let it go. (③) The beautiful product or package design elicits a self-expressive, or signaling, motivation — a desire to express oneself to others through product ownership. (④) Certain types of cute products can be associated with a lack of sophistication or seriousness, which can reduce performance expectations (lowering perceived enablement benefits). (⑤) Beautiful-looking designs may not attract attention over time because people become desensitized to them.
