

2027학년도 수능 대비 모의평가

1. 밑줄 친 make oneself public to oneself가 다음 글에서 의미하는 바로 가장 적절한 것은?

Coming of age in the 18th and 19th centuries, the personal diary became a centerpiece in the construction of a modern subjectivity, at the heart of which is the application of reason and critique to the understanding of world and self, which allowed the creation of a new kind of knowledge. Diaries were central media through which enlightened and free subjects could be constructed. They provided a space where one could write daily about her whereabouts, feelings, and thoughts. Over time and with rereading, disparate entries, events, and happenstances could be rendered into insights and narratives about the self, and allowed for the formation of subjectivity. It is in that context that the idea of "the self as both made and explored with words" emerges. Diaries were personal and private; one would write for oneself, or, in Habermas's formulation, one would make oneself public to oneself. By making the self public in a private sphere, the self also became an object for self-inspection and self-critique.

- ① use writing as a means of reflecting on oneself
- ② build one's identity by reading others' diaries
- ③ exchange feedback in the process of writing
- ④ create an alternate ego to present to others
- ⑤ develop topics for writing about selfhood

2. 다음 글의 제목으로 가장 적절한 것은?

Although cognitive and neuropsychological approaches emphasize the losses with age that might impair social perception, motivational theories indicate that there may be some gains or qualitative changes. Charles and Carstensen review a considerable body of evidence indicating that, as people get older, they tend to prioritize close social relationships, focus more on achieving emotional well-being, and attend more to positive emotional information while ignoring negative information. These changing motivational goals in old age have implications for attention to and processing of social cues from the environment. Of particular importance in considering emotional changes in old age is the presence of a positivity bias: that is, a tendency to notice, attend to, and remember more positive compared to negative information. The role of life experience in social skills also indicates that older adults might show gains in some aspects of social perception.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

The rise of voluntary simplicity in advanced (or late) stages of capitalism, and for the privileged members of these societies, is explainable by a psychological theory of Abraham Maslow. Maslow suggests ① that human needs are organized in a hierarchy. At the base ② are basic creature comforts, such as the need for food, shelter and clothing. Higher in the hierarchy is the need for love and esteem. The hierarchy is crowned with self-expression. Maslow theorized that people seek to satisfy lower needs before they turn to higher ones, although he does not deal with the question of the extent ③ to which lower needs have to be satiated before people move to deal with higher level needs. There are some who suggest that Maslow's theory ④ has disproven because people seek to satisfy their needs not in the sequence he stipulated or even all at once. This may well be the case, but the only issue relevant here is if people continue to heavily invest ⑤ themselves in the quest for creature comforts long after they are quite richly endowed in such goods.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Sport can trigger an emotional response in its consumers of the kind rarely brought forth by other products. Imagine bank customers buying memorabilia to show loyalty to their bank, or consumers ① identifying so strongly with their car insurance company that they get a tattoo with its logo. We know that some sport followers are so ② passionate about players, teams and the sport itself that their interest borders on obsession. This addiction provides the emotional glue that binds fans to teams, and maintains loyalty even in the face of on-field ③ failure. While most managers can only dream of having customers that are as passionate about their products as sport fans, the emotion triggered by sport can also have a negative impact. Sport's emotional intensity can mean that organisations have strong attachments to the past through nostalgia and club tradition. As a result, they may ④ increase efficiency, productivity and the need to respond quickly to changing market conditions. For example, a proposal to change club colours in order to project a more attractive image may be ⑤ defeated because it breaks a link with tradition.

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Whatever their differences, scientists and artists begin with the same question: can you and I see the same thing the same way? If so, how? The scientific thinker looks for features of the thing that can be stripped of subjectivity — ideally, those aspects that can be quantified and whose values will thus never change from one observer to the next. In this way, he arrives at a reality independent of all observers. The artist, on the other hand, relies on the strength of her artistry to effect a marriage between her own subjectivity and that of her readers. To a scientific thinker, this must sound like magical thinking: you're saying you will imagine something so hard it'll pop into someone else's head exactly the way you envision it? The artist has sought the opposite of the scientist's observer-independent reality. She creates a reality dependent upon observers, indeed a reality in which in order for it to exist at all.

- ① human beings must participate
- ② objectivity should be maintained
- ③ science and art need to harmonize
- ④ readers remain distanced from the arts
- ⑤ she is disengaged from her own subjectivity

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

In trying to explain how different disciplines attempt to understand autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." He meant, I believe, that psychology seeks to make patterns, find regularity, and ultimately impose order on human experience and behavior. Writers, by contrast, dive into the unruly, untamed depths of human experiences. What he said about understanding memory can be extended to our questions about young children's minds. If we psychologists are too bent on identifying the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. It is not only the developed writer or literary scholar who seems drawn toward a somewhat wild and idiosyncratic way of thinking; young children are as well. The psychologist interested in young children may have to _____ in order to get a good picture of how children think.

- ① venture a little more often into the wilderness
- ② help them recall their most precious memories
- ③ better understand the challenges of parental duty
- ④ disregard the key characteristics of children's fiction
- ⑤ standardize the paths of their psychological development
