

2027학년도 수능 대비 모의평가

1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은? (3점)

(A) Fighting against the force of the water was a thrilling challenge. Sophia tried to keep herself planted firmly in the boat, paying attention to the waves crashing against the rocks. As the water got rougher, she was forced to paddle harder to keep the waves from tossing her into the water. Her friends Mia and Rebecca were paddling eagerly behind her to balance the boat. They were soaked from all of the spray. Mia shouted to Sophia, "Are you OK? Aren't (a) you scared?" (B) "You've got a good point. It's a real advantage to graduate from college with the mindset of a daring adventurer," Mia said. Rebecca quickly added, "That's why I went to Mongolia before I started my first job out of college. Teaching English there for two months was a big challenge for me. But (b) I learned a lot from the experience. It really gave me the courage to try anything in life." Listening to her friends, Sophia looked at (c) her own reflection in the water and saw a confident young woman smiling back at her. (C) "I'm great!" Sophia shouted back excitedly. Even though the boat was getting thrown around, the girls managed to avoid hitting any rocks. Suddenly, almost as quickly as the water had got rougher, the river seemed to calm down, and they all felt relaxed. With a sigh of relief, Sophia looked around. "Wow! What a wonderful view!" (d) she shouted. The scenery around them was breathtaking. Everyone was speechless. As they enjoyed the emerald green Rocky Mountains, Mia said, "No wonder rafting is the best thing to do in Colorado!" (D) Agreeing with her friend, Rebecca gave a thumbs-up. "Sophia, your choice was excellent!" she said with a delighted smile. "I thought you were afraid of water, though, Sophia," Mia said. Sophia explained, "Well, I was before I started rafting. But I graduate from college in a few months. And, before I do, I wanted to do something really adventurous to test my bravery. I thought that if I did something completely crazy, it might give (e) me more confidence when I'm interviewing for jobs." Now they could see why she had suggested going rafting.

2. 다음 글의 제목으로 가장 적절한 것은?

In technological design, an aspiration towards seamlessness aims to make the technological experience for humans blend seamlessly into our everyday lives. Essentially, this aspiration aims towards experiences where people are no longer (a) aware of the technology, the interface or the differences between human-technology and human-human interaction. Considering the metaphor of seams in clothing, we can say that we aspire to seamless aesthetics by stitching the seams closely, pressing them flat and making sure they are (b) hidden on the inside so that we wear clothing rather than pieces of fabric. When designers and engineers talk about technological seamlessness, they are often referring to ease of use and convenience. For example, in interface design, an aspiration towards seamlessness (c) ensures the experience for the user flows and is not stressful or irritating. Most of us would have had experiences of (d) poor interface designs or apps in workplaces that make things more complicated and irritating, and have longed for more seamless interfaces. Technological seamlessness can also include less visible screens in new technologies, or virtual reality technologies with a seamless technological design. The aim is to immerse the user experience such that the visual interaction might be described as inside the screen rather than a body interacting with a digital console or object as separate entities. Similarly, seamlessness in humanoid robotic design aims to make humanoids (e) distinguishable from a human body.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Think of yourself. When you decide to get up and get a drink of water, for example, you don't consciously organize or consider the host of steps involved. Imagine if we ①had to consider every single muscle that needed to be contracted or relaxed just to stand up and walk. It would be tiresome and very slow — as patients recovering from a brain injury affecting the motor system ②knows. The autopilot parts of our brain do it for us automatically, ③freeing up our conscious mind for more important jobs. It is the older parts of our brain ④that support these automatic processes that allow us to move, hear, see, and use many of our social skills. More recently evolved abilities like talking, reading, and writing are far less automated. So, most of the time, ⑤what you are perceiving, feeling, or thinking is based on a very crude and fast analysis that happens completely without your awareness.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? (3점)

Once an event is noticed, an onlooker must decide if it is truly an emergency. Emergencies are not always clearly (a) ① labeled as such; "smoke" pouring into a waiting room may be caused by fire, or it may merely indicate a leak in a steam pipe. Screams in the street may signal an attack or a family quarrel. A man lying in a doorway may be having a coronary — or he may simply be sleeping off a drunk. A person trying to interpret a situation often looks at those around him to see how he should react. If everyone else is calm and indifferent, he will tend to remain so; if everyone else is reacting strongly, he is likely to become alert. This tendency is not merely blind conformity; ordinarily we derive much valuable information about new situations from how others around us behave. It's a (b) ② rare traveler who, in picking a roadside restaurant, chooses to stop at one where no other cars appear in the parking lot. But occasionally the reactions of others provide (c) ③ accurate information. The studied nonchalance of patients in a dentist's waiting room is a poor indication of their inner anxiety. It is considered embarrassing to "lose your cool" in public. In a potentially acute situation, then, everyone present will appear more (d) ④ unconcerned than he is in fact. A crowd can thus force (e) ⑤ inaction on its members by implying, through its passivity, that an event is not an emergency. Any individual in such a crowd fears that he may appear a fool if he behaves as though it were.

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

People have always wanted to be around other people and to learn from them. Cities have long been dynamos of social possibility, foundries of art, music, and fashion. Slang, or, if you prefer, "lexical innovation," has always started in cities — an outgrowth of all those different people so frequently exposed to one another. It spreads outward, in a manner not unlike trans-missible disease, which itself typically "takes off" in cities. If, as the noted linguist Leonard Bloomfield argued, the way a person talks is a "composite result of what he has heard before," then language innovation would happen where the most people heard and talked to the most other people. Cities drive taste change because they _____, who not surprisingly are often the creative people cities seem to attract. Media, ever more global, ever more far-reaching, spread language faster to more people.

- ① provide rich source materials for artists
- ② offer the greatest exposure to other people
- ③ cause cultural conflicts among users of slang
- ④ present ideal research environments to linguists
- ⑤ reduce the social mobility of ambitious outsiders

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

Everyone who drives, walks, or swipes a transit card in a city views herself as a transportation expert from the moment she walks out the front door. And how she views the street . That's why we find so many well-intentioned and civic-minded citizens arguing past one another. At neighborhood meetings in school auditoriums, and in back rooms at libraries and churches, local residents across the nation gather for often-contentious discussions about transportation proposals that would change a city's streets. And like all politics, all transportation is local and intensely personal. A transit project that could speed travel for tens of thousands of people can be stopped by objections to the loss of a few parking spaces or by the simple fear that the project won't work. It's not a challenge of the data or the traffic engineering or the planning. Public debates about streets are typically rooted in emotional assumptions about how a change will affect a person's commute, ability to park, belief about what is safe and what isn't, or the bottom line of a local business.

- ① relies heavily on how others see her city's streets
- ② updates itself with each new public transit policy
- ③ arises independently of the streets she travels on
- ④ tracks pretty closely with how she gets around
- ⑤ ties firmly in with how her city operates
