

2027학년도 수능 대비 모의평가

1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은?

Gold plating in the project means needlessly enhancing the expected results, namely, adding characteristics that are costly, not required, and that have low added value with respect to the targets — in other words, giving more with no real justification other than to demonstrate one's own talent. Gold plating is especially interesting for project team members, as it is typical of projects with a marked professional component — in other words, projects that involve specialists with proven experience and extensive professional autonomy. In these environments specialists often see the project as an opportunity to test and enrich their skill sets. There is therefore a strong temptation, in all good faith, to engage in gold plating, namely, to achieve more or higher-quality work that gratifies the professional but does not add value to the client's requests, and at the same time removes valuable resources from the project. As the saying goes, "The best is the enemy of the good."

- ① Pursuing perfection at work causes conflicts among team members.
- ② Raising work quality only to prove oneself is not desirable.
- ③ Inviting overqualified specialists to a project leads to bad ends.
- ④ Responding to the changing needs of clients is unnecessary.
- ⑤ Acquiring a range of skills for a project does not ensure success.

2. 다음 글의 제목으로 가장 적절한 것은?

The approach, joint cognitive systems, treats a robot as part of a human-machine team where the intelligence is synergistic, arising from the contributions of each agent. The team consists of at least one robot and one human and is often called a mixed team because it is a mixture of human and robot agents. Self-driving cars, where a person turns on and off the driving, is an example of a joint cognitive system. Entertainment robots are examples of mixed teams as are robots for telecommuting. The design process concentrates on how the agents will cooperate and coordinate with each other to accomplish the team goals. Rather than treating robots as peer agents with their own completely independent agenda, joint cognitive systems approaches treat robots as helpers such as service animals or sheep dogs. In joint cognitive system designs, artificial intelligence is used along with human-robot interaction principles to create robots that can be intelligent enough to be good team members.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

While some people brag about never farting, the truth is that everyone does it. There is a wide range of ① what is considered normal and healthy. The average person produces about 705 milliliters of gas in 24 hours. To determine these numbers, scientists recruited and asked 75 healthy adults to eat half of a can of beans, and then ② answered a questionnaire on how often and how much gas they farted out. It was found that men and women both fart about eight times a day, although ③ passing gas up to 20 times a day is normal. Large farts were most common in the hour after meals, and the subjects released half as much gas while sleeping as they ④ did while awake. Some illnesses can make you pass gas more than normal. Health conditions such as food poisoning ⑤ have increased gas as a common symptom. If you feel like you are farting more than usual, and have other symptoms, give your doctor a call to rule out other causes of gas.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Gaining an audience for your writing involves not just finding a voice but ensuring that voice resonates with your intended readers. Entrepreneurs understand the importance of building a brand that makes them memorable and distinct from their competitors, drawing customers to their products or services. They achieve this by ①pinpointing their target audience, crafting a unique value proposition, and shaping a recognizable identity. While scholars might initially find these entrepreneurial concepts ②alien, they actually engage in similar practices when they set themselves apart in their academic writing. Consider the typical literature review and motivation section of a scholarly article — the aim is to highlight ③gaps in existing research and position oneself as the one who will address these overlooked areas. The challenge, as Labaree suggests, is not just in developing innovative ideas but in ④cultivating a distinctive voice that makes readers think, "Ah, this sounds like the author." It's about balancing the expression of your ideas with the development of a unique voice that leaves a ⑤temporary impression on your audience.

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

More than just having territories, animals also partition them. And this insight turned out to be particularly useful for zoo husbandry. An animal's territory has an internal arrangement that Heini Hediger compared to the inside of a person's house. Most of us assign separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep _____. To a varying extent, other animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may be set aside for waste, depending on the species of animal.

- ① an interest in close neighbors
- ② a neat functional organization
- ③ a stock of emergency supplies
- ④ a distance from potential rivals
- ⑤ a strictly observed daily routine

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

People have always needed to eat, and they always will. Rising emphasis on self-expression values does not put an end to material desires. But prevailing economic orientations are gradually being reshaped. People who work in the knowledge sector continue to seek high salaries, but they place equal or greater emphasis on doing stimulating work and being able to follow their own time schedules. Consumption is becoming progressively less determined by the need for sustenance and the practical use of the goods consumed. People still eat, but a growing component of food's value is determined by its aspects. People pay a premium to eat exotic cuisines that provide an interesting experience or that symbolize a distinctive life-style. The publics of postindustrial societies place growing emphasis on "political consumerism," such as boycotting goods whose production violates ecological or ethical standards. Consumption is less and less a matter of sustenance and more and more a question of life-style — and choice.

- ① quantitative
- ② nonmaterial
- ③ nutritional
- ④ invariable
- ⑤ economic
