(A) Fighting against the force of the water was a thrilling challenge. Sophia tried to keep herself planted firmly in the boat, paying attention to the waves crashing against the rocks. As the water got rougher, she was forced to paddle harder to keep the waves from tossing her into the water. Her friends Mia and Rebecca were paddling eagerly behind her to balance the boat. They were soaked from all of the spray. Mia shouted to Sophia, "Are you OK? Aren't (a) you scared?" (B) "You've got a good point. It's a real advantage to graduate from college with the mindset of a daring adventurer," Mia said. Rebecca quickly added, "That's why I went to Mongolia before I started my first job out of college. Teaching English there for two months was a big challenge for me. But (b) I learned a lot from the experience. It really gave me the courage to try anything in life." Listening to her friends, Sophia looked at (c) her own reflection in the water and saw a confident young woman smiling back at her. (C) "I'm great!" Sophia shouted back excitedly. Even though the boat was getting thrown around, the girls managed to avoid hitting any rocks. Suddenly, almost as quickly as the water had got rougher, the river seemed to calm down, and they all felt relaxed. With a sigh of relief, Sophia looked around. "Wow! What a wonderful view!" (d) she shouted. The scenery around them was breathtaking. Everyone was speechless. As they enjoyed the emerald green Rocky Mountains, Mia said, "No wonder rafting is the best thing to do in Colorado!" (D) Agreeing with her friend, Rebecca gave a thumbs-up. "Sophia, your choice was excellent!" she said with a delighted smile. "I thought you were afraid of water, though, Sophia," Mia said. Sophia explained, "Well, I was before I started rafting. But I graduate from college in a few months. And, before I do, I wanted to do something really adventurous to test my bravery. I thought that if I did something completely crazy, it might give (e) me more confidence when I'm interviewing for jobs." Now they could see why she had suggested going rafting.

Food, as we all know, is essential for human life. It also is the basis for several major industries found in many countries around the world such as in agriculture, food processing, food retailing and food service. For millennia, the focus of those involved with food as a human and economic phenomenon was on its production, preservation, distribution, pricing and other practical concerns. But in the late 18th century this began to change. Food became more than just a life necessity. Restaurants began to be developed, initially in France but eventually in other nations, as a distinct institution offering people dining choices and table service, the opportunity for socialization and, over time, a finer and finer atmosphere. The rise of restaurants eventually led to a class of diners who prided themselves on being critics of taste, food and cooking. Brillat-Savarin is probably the best known of the 'culinary philosophers' or, in today's parlance, a 'foodie'. One of Brillat-Savarin's better known sayings was, 'tell me what you eat, and I'll tell you who you are.'

Accepting whatever others are communicating only pays off if their interests correspond to ours think cells in a body, bees in a beehive. As far as communication between humans is concerned, such commonality of interests ① is rarely achieved; even a pregnant mother has reasons to mistrust the chemical signals sent by her fetus. Fortunately, there are ways of making communication work even in the most adversarial of relationships. A prey can convince a predator not to chase ② it. But for such communication to occur, there must be strong guarantees ③ which those who receive the signal will be better off believing it. The messages have to be kept, on the whole, ④ honest. In the case of humans, honesty is maintained by a set of cognitive mechanisms that evaluate ⑤ communicated information. These mechanisms allow us to accept most beneficial messages to be open while rejecting most harmful messages to be vigilant. * fetus: 태아 ** adversarial: 반대자의 *** vigilant: 경계하는

People are correct when they feel that the written poetry of literate societies and the oral poetry of non-literate ones differ considerably from the everyday language spoken in the community. Listeners not only accept the (a) ① strange use of words, rearrangement of word order, assonance, alliteration, rhythm, rhyme, compression of thought, and so on they actually expect to find these things in poetry and they are disappointed when poetry does not sound "poetic." But those who regard poetry as a (b) ② different category of language altogether are deaf to the true achievements of the poet. Rather, the poet artfully manipulates the same raw materials of his language as are used in everyday speech; his skill is to find new possibilities in the resources already in the language. In much the same way that people living at the seashore become so accustomed to the sound of waves that they no longer hear it, most of us have become (c) ③ sensitive to the flood tide of words, millions of them every day, that hit our eardrums. One function of poetry is to depict the world with a (d) ④ fresh perception to make it strange so that we will listen to language once again. But the successful poet never departs so far into the strange world of language that none of his listeners can (e) ⑤ follow him. He still remains the communicator, the man of speech.

Enabling animals to is an almost universal function of learning. Most animals innately avoid objects they have not previously encountered. Unfamiliar objects may be dangerous; treating them with caution has survival value. If persisted in, however, such careful behavior could interfere with feeding and other necessary activities to the extent that the benefit of caution would be lost. A turtle that withdraws into its shell at every puff of wind or whenever a cloud casts a shadow would never win races, not even with a lazy rabbit. To overcome this problem, almost all animals habituate to safe stimuli that occur frequently. Confronted by a strange object, an inexperienced animal may freeze or attempt to hide, but if nothing unpleasant happens, sooner or later it will continue its activity. The possibility also exists that an unfamiliar object may be useful, so if it poses no immediate threat, a closer inspection may be worthwhile. 3점

*innately: 선천적으로

- ① weigh the benefits of treating familiar things with care
- ② plan escape routes after predicting possible attacks
- ③ overcome repeated feeding failures for survival
- ④ operate in the presence of harmless stimuli
- ⑤ monitor the surrounding area regularly

In the post-World War II years after 1945, unparalleled economic growth fueled a building boom and a massive migration from the central cities to the new suburban areas. The suburbs were far more dependent on the automobile, signaling the shift from primary dependence on public transportation to private cars. Soon this led to the construction of better highways and freeways and the decline and even loss of public transportation. With all of these changes came a _____ of leisure. As more people owned their own homes, with more space inside and lovely yards outside, their recreation and leisure time was increasingly centered around the home or, at most, the neighborhood. One major activity of this home-based leisure was watching television. No longer did one have to ride the trolley to the theater to watch a movie; similar entertainment was available for free and more conveniently from television.

The passage uses an analogy of people living by the sea who become so accustomed to the sound of waves that they 'no longer hear it.' Similarly, the author argues, we are so inundated with words that we have become desensitized to them. Therefore, stating we have become 'sensitive' to the flood of words is contextually incorrect; we have become 'insensitive' or numb.

5. [정답] ④

동물들은 낯선 대상을 본능적으로 피하지만, 이런 신중한 행동이 계속되면 먹이 활동 같은 필수 활동을 방해할 수 있다. 이 문제를 극복하기 위해 동물들은 '자주 발생하는 안전한 자극에 익숙해진다(habituate to safe stimuli that occur frequently)'. 즉, 불쾌한 일이 일어나지 않으면 활동을 계속한다. 이것은 동물들이 학습을 통해 '무해한 자극이 있는 상황에서도 정상적으로 활동(operate in the presence of harmless stimuli)'할 수 있게 됨을 의미한다.

지문은 2차 세계대전 이후 사람들이 대중교통 대신 자가용(private cars)을 이용하고, 극장 대신 집에서 TV를 보는 등 여가 생활의 중심이 공적(public) 공간에서 사적(private) 공간인 '집(home)'으로 옮겨갔음을 설명한다. 이러한 변화는 '여가의 사유화(privatization of leisure)'로 요약할 수 있다.
