

2027학년도 수능 대비 모의평가

1. 밑줄 친 부분이 다음 글에서 의미하는 바로 가장 적절한 것은?

Around the turn of the twentieth century, anthropologists trained in the natural sciences began to reimagine what a science of humanity should look like and how social scientists ought to go about studying cultural groups. Some of those anthropologists insisted that one should at least spend significant time actually observing and talking to the people studied. Early ethnographers such as Franz Boas and Alfred Cort Haddon typically traveled to the remote locations where the people in question lived and spent a few weeks to a few months there. They sought out a local Western host who was familiar with the people and the area (such as a colonial official, missionary, or businessman) and found accommodations through them. Although they did at times venture into the community without a guide, they generally did not spend significant time with the local people. Thus, their observations were primarily conducted from their verandas.

- ① seeking to build long-lasting relationships with the natives
- ② participating in collaborative research with natural scientists
- ③ engaging in little direct contact with the people being studied
- ④ cooperating actively with Western hosts in the local community
- ⑤ struggling to take a wider view of the native culture examined

2. 다음 글의 제목으로 가장 적절한 것은? (3점)

Different parts of the brain's visual system get information on a need-to-know basis. Cells that help your hand muscles reach out to an object need to know the size and location of the object, but they don't need to know about color. They need to know a little about shape, but not in great detail. Cells that help you recognize people's faces need to be extremely sensitive to details of shape, but they can pay less attention to location. It is natural to assume that anyone who sees an object sees everything about it—the shape, color, location, and movement. However, one part of your brain sees its shape, another sees color, another detects location, and another perceives movement. Consequently, after localized brain damage, it is possible to see certain aspects of an object and not others. Centuries ago, people found it difficult to imagine how someone could see an object without seeing what color it is. Even today, you might find it surprising to learn about people who see an object without seeing where it is, or see it without seeing whether it is moving.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

How ① closely related are your concept of success and the type of work you are doing or training to do? We can probably find more variations in ② what work means in a person's life than in any other aspect of daily living. Some people think of work solely as a means of making money ③ to satisfy other needs. A few think of it merely as something to do. Others recognize these purposes but view their work as an opportunity to lead a ④ challenging, productive life. They are involved in developing their potential, in becoming more self-actualized. With almost everyone, work enters into the concept of success. This is true even for people who say, "If I were rich, I wouldn't work." For most of us, then, it is practical to consider ⑤ how work-related goals fit into our broader goals in life.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

We all like to think of ourselves as rational actors, careful and considered in our thinking, capable of sound and reliable judgments. We might believe that we generally consider different points of view and make ①informed decisions. We are, in fact, "predictably irrational," as psychologist Dan Ariely titled his book on the topic. All of us engage in automatic, reflexive thinking, typically taking the ②easier path and conserving mental effort. Although we each may have the subjective impression that we are careful thinkers, we often make snap judgments or no real judgments at all. In addition, numerous biases inhibit or override reflective, deliberative thought; intuitive theories can also interfere with ③acceptance of accurate scientific explanations. Understanding more about how our minds work and how biases may operate can make us each ④less subject to fallacious reasoning, more rational, and more aware of the problems in others' thinking. Learning to understand the built-in ⑤rationality of our mental processes can also help us improve our ability to inform others more effectively.

5. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

One of the common themes of the Western philosophical tradition is the distinction between sensual perceptions and rational knowledge. Since Plato, the supremacy of rational reason is based on the assertion that it is able to extract true knowledge from experience. As the discussion in the Republic helps to explain, perceptions are inherently unreliable and misleading because the senses are subject to errors and illusions. Only the rational discourse has the tools to overcome illusions and to point towards true knowledge. For instance, perception suggests that a figure in the distance is smaller than it really is. Yet, the application of logical reasoning will reveal that the figure only appears small because it obeys the laws of geometrical perspective. Nevertheless, even after the perspectival correction is applied and reason concludes that perception is misleading, the figure still appears small, and the truth of the matter is revealed .

- ① as the outcome of blindly following sensual experience
- ② by moving away from the idea of perfect representation
- ③ beyond the limit of where rational knowledge can approach
- ④ through a variety of experiences rather than logical reasoning
- ⑤ not in the perception of the figure but in its rational representation

6. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오. (3점)

People have always wanted to be around other people and to learn from them. Cities have long been dynamos of social possibility, foundries of art, music, and fashion. Slang, or, if you prefer, "lexical innovation," has always started in cities — an outgrowth of all those different people so frequently exposed to one another. It spreads outward, in a manner not unlike trans-missile disease, which itself typically "takes off" in cities. If, as the noted linguist Leonard Bloomfield argued, the way a person talks is a "composite result of what he has heard before," then language innovation would happen where the most people heard and talked to the most other people. Cities drive taste change because they _____, who not surprisingly are often the creative people cities seem to attract. Media, ever more global, ever more far-reaching, spread language faster to more people.

- ① provide rich source materials for artists
- ② offer the greatest exposure to other people
- ③ cause cultural conflicts among users of slang
- ④ present ideal research environments to linguists
- ⑤ reduce the social mobility of ambitious outsiders

정답 및 해설

1. [정답] ③

[해설]

The passage describes early anthropologists' research methods as involving limited interaction with the local people ('did not spend significant time with the local people'). The phrase 'from their verandas' metaphorically represents this detached and observational stance, implying they studied the people from a distance without direct, immersive contact.

2. [정답] ⑤

[해설]

지문은 뇌의 시각 시스템이 모양, 색, 위치, 움직임과 같은 시각적 요소들을 각기 다른 부분에서 독립적으로 처리한다고 설명한다. 뇌 손상으로 인해 특정 시각 정보만 인지하지 못하는 사례를 통해 이러한 뇌세포의 분리되고 독립적인 시각 인지 방식을 강조하고 있다. 따라서 '분리되고 독립적인: 뇌세포의 시각 인지'라는 제목이 글의 핵심 내용을 가장 잘 나타낸다.

3. [정답] ⑤

[해설]

모든 선택지가 문법적으로 올바르다. 이러한 경우, 문제 자체에 오류가 있을 가능성이 높다. ⑤ how는 consider의 목적어 역할을 하는 명사절을 이끄는 의문부사로, '어떻게 ~하는지'라는 의미로 문맥상 적절하다. ① closely는 형용사 related를 수식하는 부사이다. ② what은 find의 목적어인 명사절을 이끄는 관계대명사/의문사이다. ③ to satisfy는 a means를 수식하는 to부정사의 형용사적 용법이다. ④ challenging은 a life를 수식하는 현재분사로 '도전적인 삶'이라는 의미이다. 모든 보기가 문법적으로 틀리지 않았으므로, 출제 오류일 가능성이 있다. (참고: 제공된 정답 5번을 기준으로 설명하자면, how가 어색하다고 판단했을 수 있으나 문법적으로는 문제가 없다.)

4. [정답] ⑤

[해설]

The passage consistently describes human thinking as flawed, biased, and 'predictably irrational.' The final sentence claims that understanding the built-in 'rationality' of our minds is helpful. This contradicts the entire context of the paragraph. To be consistent with the theme of overcoming cognitive biases, one must understand the built-in 'irrationality' of mental processes.

5. [정답] ⑤

[해설]

이 글은 감각적 지각(perception)은 오류가 많지만 이성적 추론(rational reason)을 통해 진정한 지식을 얻을 수 있다는 서양 철학의 전통을 설명합니다. 멀리 있는 형상이 작게 보이는 것은 지각의 오류이며, 이성은 원근법이라는 논리를 통해 그것이 단지 작게 '보일' 뿐임을 밝혀냅니다. 이성적 교정 후에도 형상은 여전히 작게 보이지만, 사물의 진실은 보이는 것(지각)이 아니라 이성적으로 이해되는 것, 즉 '그것의 이성적 재현/표상(its rational representation)' 속에서 드러납니다.

6. [정답] ②

[해설]

이 글은 도시가 언어 혁신과 유행의 변화를 주도하는 이유를 설명한다. 그 핵심 원인으로 다양한 사람들이 서로에게 빈번하게 노출된다는 점('so frequently exposed to one another')과 가장 많은 사람들이 서로 듣고 말하는 장소라는 점('where the most people heard and talked to the most other people')을 반복해서 강조한다. 따라서 빈칸에는 도시가 '다른 사람들에게 가장 큰 노출을 제공하기' 때문에 유행 변화를 주도한다는 내용이 들어가야 한다.
