

2027학년도 수능 대비 모의평가

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

How ① closely related are your concept of success and the type of work you are doing or training to do? We can probably find more variations in ② what work means in a person's life than in any other aspect of daily living. Some people think of work solely as a means of making money ③ to satisfy other needs. A few think of it merely as something to do. Others recognize these purposes but view their work as an opportunity to lead a ④ challenging, productive life. They are involved in developing their potential, in becoming more self-actualized. With almost everyone, work enters into the concept of success. This is true even for people who say, "If I were rich, I wouldn't work." For most of us, then, it is practical to consider ⑤ how work-related goals fit into our broader goals in life.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Autonomy does not mean having no constraints, or being totally in control and independent of other people. That is rarely possible and hardly ever desirable. Being ① rigidly self-sufficient, or exerting unlimited control, exacts a heavy price on yourself and the people around you. Autonomy means having sufficient control and choice over the things that are important to you, and using whatever power you ② do have to change things in a positive way. When you take on a challenge, by definition you submit yourself to the demands of that responsibility. But, paradoxically, once you do ③ that you experience a surge of inner freedom. That's because the act of making the choice, of going for something, releases you to direct all your energy towards the targets and ④ frees you from ambivalence and anxiety. With the die cast, you feel more in charge of your own destiny, better able to resist pressures from others, and more likely to judge ⑤ you by your own personal standards.

*ambivalence: 양면 가치

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

For years, many psychologists have held strongly to the belief ① that the key to addressing negative health habits is to change behavior. This, more than values and attitudes, ② is the part of personality that is easiest to change. Ingestive habits such as smoking, drinking and various eating behaviors are the most common health concerns targeted for behavioral changes. Process addiction behaviors (workaholism, shopaholism, and the like) fall into this category as well. Mental imagery combined with power of suggestion was taken up as the premise of behavioral medicine to help people change negative health behaviors into positive ③ ones. Although this technique alone will not produce changes, when ④ using alongside other behavior modification tactics and coping strategies, behavioral changes have proved effective for some people. ⑤ What mental imagery does is reinforce a new desired behavior. Repeated use of images reinforces the desired behavior more strongly over time.
