I'm Charlie Reeves, manager of Toon Skills Company. If you're interested in new webtoon-making skills and techniques, this post is for you. This year, we've launched special online courses, which contain a variety of contents about webtoon production. Each course consists of ten units that help improve your drawing and story-telling skills. Moreover, these courses are designed to suit any level, from beginner to advanced. It costs \$45 for one course, and you can watch your course as many times as you want for six months. Our courses with talented and experienced instructors will open up a new world of creativity for you. It's time to start creating your webtoon world at <https://webtoonskills.com>.

We argue that the ethical principles of justice provide an essential foundation for policies to protect unborn generations and the poorest countries from climate change. Related issues arise in connection with current and persistently inadequate aid for these nations, in the face of growing threats to agriculture and water supply, and the rules of international trade that mainly benefit rich countries. Increasing aid for the world's poorest peoples can be an essential part of effective mitigation. With 20 percent of carbon emissions from (mostly tropical) deforestation, carbon credits for forest preservation would combine aid to poorer countries with one of the most cost-effective forms of abatement. Perhaps the most cost-effective but politically complicated policy reform would be the removal of several hundred billions of dollars of direct annual subsidies from the two biggest recipients in the OECD — destructive industrial agriculture and fossil fuels. Even a small amount of this money would accelerate the already rapid rate of technical progress and investment in renewable energy in many areas, as well as encourage the essential switch to conservation agriculture.

- ① reforming diplomatic policies in poor countries
- ② increasing global awareness of the environmental crisis
- ③ reasons for restoring economic equality in poor countries
- ④ coping with climate change by reforming aid and policies
- ⑤ roles of the OECD in solving international conflicts

As far back as 32,000 years ago, prehistoric cave artists skillfully used modeling shadows to give their horses and bison volume. A few thousand years ago ancient Egyptian and then ancient Greek art presented human forms in shadow-style silhouette. But cast shadows do not appear in Western art until about 400 BCE in Athens. It was only after shadows had become an established, if controversial, part of representation that classical writers claimed that art itself had begun with the tracing of a human shadow. Greeks and Romans were the first to make the transition from modeling shadows to cast shadows, a practice that implied a consistent light source, a fixed point of view, and an understanding of geometric projection. In fact, what we might now call "shadow studies" — the exploration of shadows in their various artistic representations — has its roots in ancient Athens. Ever since, the practice of portraying shadows has evolved along with critical analysis of them, as artists and theoreticians have engaged in an ongoing debate about the significance of shadow representation.

Humans are so averse to feeling that they're being cheated ①that they often respond in ways that seemingly make little sense. Behavioral economists — the economists who actually study ②what people do as opposed to the kind who simply assume the human mind works like a calculator — have shown again and again that people reject unfair offers even if ③it costs them money to do so. The typical experiment uses a task called the ultimatum game. It's pretty straightforward. One person in a pair is given some money — say \$10. She then has the opportunity to offer some amount of it to her partner. The partner only has two options. He can take what's offered or ④refused to take anything. There's no room for negotiation; that's why it's called the ultimatum game. What typically happens? Many people offer an equal split to the partner, ⑤leaving both individuals happy and willing to trust each other in the future.

A serious deterioration in people's working lives would be deeply disturbing to the social order. Indeed, few consequences of technological change would be as dangerous. Today, the world of work is the main way that we share out the fruits of growth: for most people, their job is their main, if not their only, source of income. Technological unemployment would weaken that longstanding arrangement, encouraging an even more extreme version of inequality in which some people receive more income than others and many receive nothing at all. Nor would the disturbance be only economic. For many people, their work is both a source of income and of meaning. And with that in mind, the threat is even broader: not only that the labor market might be hollowed out, leaving some unable to find a good job and a reliable income, but that this sense of fulfilment that some people are fortunate to feel in their jobs might be hollowed out as well, leaving them unable to find purpose and live a satisfying life.

By creating unemployment, technology would upset the social order, affecting the ____ (A) ____ of wealth and possibly eliminating the emotional ____ (B) ____ that some discover in work.
