

2027학년도 수능 대비 모의평가

1. 다음 글의 목적으로 가장 적절한 것은? (3점)

Dear Parents, My name is Danielle Hamilton, and I am the principal of Techville High School. As you may know, there is major road construction scheduled to take place in front of our school next month. This raises safety concerns. Therefore, we are asking for parent volunteers to help with directing traffic. The volunteer hours are from 8:00 to 8:30 a.m. and from 4:30 to 5:00 p.m. on school days. If you are willing to take part in the traffic safety volunteer group, please email us with your preferred schedule at info@techville.edu. Your participation will be helpful in building a safer school environment for our students. Thank you in advance for your contributions. Sincerely, Danielle Hamilton

- ① 교통안전 봉사 참여를 요청하려고
- ② 자원봉사 교육 일정을 공지하려고
- ③ 학교 시설 공사에 대한 양해를 구하려고
- ④ 학교 앞 도로 공사의 필요성을 설명하려고
- ⑤ 등·하교 차량 안전 수칙 준수를 당부하려고

2. 다음 글의 주제로 가장 적절한 것은?

The term "biological control" has been used, at times, in a broad context to cover a full spectrum of biological organisms and biologically based products. This has been spectacularly successful in many instances, with a number of pest problems permanently resolved by importation and successful establishment of natural enemies. These importation successes have been limited largely to certain types of ecosystems and/or pest situations such as introduced pests in perennial ecosystems. On the other hand, this approach has met with limited success for major pests of row crops or other ephemeral systems. In these situations, the problem is often not the lack of effective natural enemies but management practices and a lack of concerted research on factors that determine the success or failure of importation attempts in the specific agro-ecosystem setting. Thus, importation programs, to date, are largely a matter of trial and error based on experience of the individual specialists involved.

- ① difficulties in identifying major pests in agriculture
- ② benefits of introducing natural enemies into ecosystems
- ③ ways to apply biological control strategies to agriculture
- ④ side effects from pest elimination through biological control
- ⑤ reasons for partial success of importation in biological control

3. 다음 글의 제목으로 가장 적절한 것은?

The approach, joint cognitive systems, treats a robot as part of a human-machine team where the intelligence is synergistic, arising from the contributions of each agent. The team consists of at least one robot and one human and is often called a mixed team because it is a mixture of human and robot agents. Self-driving cars, where a person turns on and off the driving, is an example of a joint cognitive system. Entertainment robots are examples of mixed teams as are robots for telecommuting. The design process concentrates on how the agents will cooperate and coordinate with each other to accomplish the team goals. Rather than treating robots as peer agents with their own completely independent agenda, joint cognitive systems approaches treat robots as helpers such as service animals or sheep dogs. In joint cognitive system designs, artificial intelligence is used along with human-robot interaction principles to create robots that can be intelligent enough to be good team members.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Honey can be eaten by itself or mixed with other ingredients. Natural or pure honey has had no additives, preservatives or synthetic ingredients added. Also ①referred to as 'undiluted', it is usually more expensive than diluted honeys. Natural honey can also be called 'blended honey', ②which honeys from various sources are blended together not by the bees, but by human processors and distributors in stages after the honey has been collected. Blending is frequently done for taste as well as marketing reasons, especially since some consumers find the darker honeys too ③strong. Mixing different types of honey together can make it more palatable, and also gives a more uniform flavour this is an important consideration for producers and retailers, who ④feel the need to guarantee reliable, unsurprising (typically mild) flavours to their customers. Clover is one of the most popular honeys in the U.S., and ⑤its mild flavour and taste have become familiar to many Americans.

5. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

When considered in terms of evolutionary success, many of the seemingly irrational choices that people make do not seem so foolish after all. Most animals, including our ancestors and modern-day capuchin monkeys, lived very close to the margin of survival. Paleontologists who study early human civilizations have uncovered evidence that our ancestors faced frequent periods of drought and freezing. When you are living on the verge of starvation, a slight downturn in your food reserves makes a lot more difference than a slight upturn. Anthropologists who study people still living in hunter-gatherer societies have discovered that they regularly make choices designed to produce not the best opportunity for obtaining a hyperabundant supply of food but, instead, the least danger of ending up with an insufficient supply. In other words, people everywhere have a strong motivation to avoid falling below the level that will feed themselves and their families. If our ancestors hadn't agonized over losses and instead had taken too many chances in going after the big gains, they'd have been more likely to lose out and never become anyone's ancestor.

*agonize: 고민하다, 고뇌하다

Our ancestors gave priority to ____ (A) ____ minimum resources rather than pursuing maximum gains, and that was the rational choice for human ____ (B) ____ from an evolutionary perspective.

- | (A) | (B) | (A) | (B) |
|---------------|-------------------|-----------|-------------------|
| ① securing | freedom | ② sharing | interaction |
| ③ identifying | exploration | ④ sharing | prosperity |
| ⑤ securing | survival | | |

정답 및 해설

1. [정답] ①

[해설]

글의 중반부에 명시적인 목적 표현 'we are asking for parent volunteers to help with directing traffic'가 등장하여, 교통안전 봉사자 모집이 글의 목적임을 명확히 알 수 있다.

2. [정답] ⑤

[해설]

이 글은 생물학적 방제(biological control)의 한 방법인 천적 도입(importation)이 어떤 경우에는 'spectacularly successful'했지만, 다른 경우에는 'limited success'를 거두었다고 설명한다. 글의 후반부는 이러한 제한된 성공의 원인으로 '경영 관행'과 '요인에 대한 공동 연구의 부족' 등을 지적하며, 성공과 실패를 결정하는 요인에 대한 분석을 제공한다. 따라서 글의 주제는 '생물학적 방제에서 천적 도입이 부분적인 성공에 그친 이유'가 가장 적절하다.

3. [정답] ①

[해설]

지문은 'joint cognitive systems'라는 접근법을 설명하며, 로봇을 인간과 기계 팀의 일부로 취급한다고 말한다. 'human-machine team', 'synergistic', 'cooperate and coordinate' 등의 표현을 통해 인간과 기계가 협력하여 시너지를 내는 것을 강조하고 있다. 따라서 '함께하면 더 좋다: 인간과 기계의 협업을 의미하는 ①번이 글의 제목으로 가장 적절하다.

4. [정답] ②

[해설]

②번에서 'which'는 관계대명사이다. 관계대명사 뒤에는 불완전한 절이 와야 하지만, 'honey from various sources are blended together'는 주어(honey...)와 수동태 동사(are blended)를 갖춘 완전한 문장이다. 따라서 관계대명사 'which'를 쓸 수 없다. 문맥상 '그곳에서' 또는 '그 안에서'라는 의미를 나타내는 관계부사 'where'나 'in which'가 와야 한다.

5. [정답] ⑤

[해설]

지문은 우리 조상들이 생존의 한계에 가까운 환경에서 살았기 때문에, 최대의 이익을 추구하기보다는 불충분한 공급으로 끝날 위험을 최소화하는 선택을 했다고 설명한다. 이는 최소한의 자원을 '확보하는(securing)' 것을 우선시했음을 의미한다. 이러한 선택은 손실을 피함으로써 결국 멸종하지 않고 조상이 될 수 있었던, 즉 인간의 '생존(survival)'을 위한 합리적인 선택이었음을 진화론적 관점에서 설명하고 있다.
