Dear Hylean Miller, Hello, I'm Nelson Perkins, a teacher and swimming coach at Broomstone High School. Last week, I made a reservation for one of your company's swimming pools for our summer swim camp. However, due to its popularity, thirty more students are coming to the camp than we expected, so we need one more swimming pool for them. The rental section on your website says that there are two other swimming pools during the summer season: the Splash Pool and the Rainbow Pool. Please let me know if an additional rental would be possible. Thank you in advance. Best Wishes, Nelson Perkins

Environmental learning occurs when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are using as a guide, not the neighbors themselves. They are looking at farming activities as experiments and assessing such factors as relative advantage, compatibility with existing resources, difficulty of use, and "trialability" — how well can it be experimented with. But that criterion of "trialability" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very flawed laboratories. Farmers cannot set up the controlled conditions of professional test plots in research facilities. Farmers also often confront complex and difficult-to-observe phenomena that would be hard to manage even if they could run controlled experiments. Moreover farmers can rarely acquire payoff information on more than a few of the production methods they might use, which makes the criterion of "relative advantage" hard to measure.

- ① limitations of using empirical observations in farming
- ② challenges in modernizing traditional farming equipment
- ③ necessity of prioritizing trialability in agricultural innovation
- ④ importance of making instinctive decisions in agriculture
- ⑤ ways to control unpredictable agricultural phenomena

The concept of overtourism rests on a particular assumption about people and places common in tourism studies and the social sciences in general. Both are seen as clearly defined and demarcated. People are framed as bounded social actors either playing the role of hosts or guests. Places, in a similar way, are treated as stable containers with clear boundaries. Hence, places can be full of tourists and thus suffer from overtourism. But what does it mean for a place to be full of people? Indeed, there are examples of particular attractions that have limited capacity and where there is actually no room for more visitors. This is not least the case with some man-made constructions such as the Eiffel Tower. However, with places such as cities, regions or even whole countries being promoted as destinations and described as victims of overtourism, things become more complex. What is excessive or out of proportion is highly relative and might be more related to other aspects than physical capacity, such as natural degradation and economic leakages (not to mention politics and local power dynamics).

To begin with a psychological reason, the knowledge of another's personal affairs can tempt the possessor of this information ①to repeat it as gossip because as unrevealed information it remains socially inactive. Only when the information is repeated can its possessor ②turn the fact that he knows something into something socially valuable like social recognition, prestige, and notoriety. As long as he keeps his information to ③himself, he may feel superior to those who do not know it. But knowing and not telling does not give him that feeling of "superiority that, so to say, latently contained in the secret, fully ④actualizing itself only at the moment of disclosure." This is the main motive for gossiping about well-known figures and superiors. The gossip producer assumes that some of the "fame" of the subject of gossip, as ⑤whose "friend" he presents himself, will rub off on him.

*prestige: 명성 **notoriety: 악명 ***latently: 잠재적으로

Over the past few decades, architecture as an idea and practice has increasingly limited its definition of itself. In the foreseeable future, the instrumentality of architecture in effecting actual change — that is, change that challenges the dominance of commercial institutions, their aims, and values — will diminish. While the present day seems to be a time of unparalleled innovation and freedom of choice, the reality is that architectural styles and forms are often the attractive packaging and repackaging of the same proven, marketable concepts. The speed with which "radical" designs by celebrity architects achieve acceptance and popularity demonstrates that formal innovation has itself become an important commodity. However, beneath the cloak of radicalism, the conventions of existing building typologies and programs, with all their comforting familiarity, still rule — and sell. What is needed desperately today are approaches to architecture that can free its potential to transform our ways of thinking and acting.

*cloak: 망토 **typology: 유형학

Seemingly innovative, architecture has actually become ____ (A) ____ in its own convention and commercialized environment, so efforts should be made to ____ (B) ____ its power to change us.
