Dear AI summer program participants, I am your instructor John Phillips. I am excited about your enthusiasm for expanding your familiarity with AI by registering for our AI summer program. Thanks to your interest, more participants enrolled in our program than we expected. Therefore, the original lecture room does not have enough seating for all the participants. So, we have decided to move the location to make space for everyone. The program was supposed to be held in classroom 502 in the Ranark building, but it will be changed to classroom 103 in the Whitewood building. Thank you for your understanding. I am looking forward to meeting you all. Sincerely, John Phillips

In the twelfth to thirteenth centuries there appeared the first manuals teaching "table manners" to the offspring of aristocrats. It was a genre that subsequently had a great success in the early modern period with *The Courtier* by Baldassare Castiglione, *The Galateo* by Monsignor Della Casa, and many others produced in different European countries. In a variety of ways and meanings, these are all instruments intended to define or distinguish who is in from who is out, separating the participants from the ostracized. It is for this reason that manuals of "good manners" addressed to the aristocracy always have a negative reference to the peasant who behaves badly, who "doesn't know" what the rules are, and for this reason is excluded from the lordly table. Food etiquette had become a sign of social barriers and of the impossibility of breaking them down.

When consumers lack adequate information to make informed choices, governments frequently step in to require that firms provide information. In the United States, we are all familiar with the mandatory nutritional information placed on food products. The Securities and Exchange Commission that monitors American stock markets forces firms to meet certain reporting requirements before their stock can be listed on exchanges such as the New York Stock Exchange. Such reporting helps ensure that private investors have reliable information on which to base their investment decisions. Often, however, these regulations do not work adequately, as the Enron scandal in 2001 clearly illustrates. The oil trading company Enron had cooked its books to overstate its profitability in its mandated reports. One outcome of Enron's subsequent financial collapse was the introduction of new regulations designed to improve the reliability of the information that companies must provide to the public.

Speculations about the meaning and purpose of prehistoric art ①rely heavily on analogies drawn with modern-day hunter-gatherer societies. Such primitive societies, ②as Steven Mithen emphasizes in *The Prehistory of the Modern Mind*, tend to view man and beast, animal and plant, organic and inorganic spheres, as participants in an integrated, animated totality. The dual expressions of this tendency are anthropomorphism (the practice of regarding animals as humans) and totemism (the practice of regarding humans as animals), both of ③which spread through the visual art and the mythology of primitive cultures. Thus the natural world is conceptualized in terms of human social relations. When considered in this light, the visual preoccupation of early humans with the nonhuman creatures ④inhabited their world becomes profoundly meaningful. Among hunter-gatherers, animals are not only good to eat, they are also good to think about, as Claude Lévi-Strauss has observed. In the practice of totemism, he has suggested, an unlettered humanity "broods upon ⑤itself and its place in nature."

"Craftsmanship" may suggest a way of life that declined with the arrival of industrial society but this is misleading. Craftsmanship names an enduring, basic human impulse, the desire to do a job well for its own sake. Craftsmanship cuts a far wider swath than skilled manual labor; it serves the computer programmer, the doctor, and the artist; parenting improves when it is practiced as a skilled craft, as does citizenship. In all these domains, craftsmanship focuses on objective standards, on the thing in itself. Social and economic conditions, however, often stand in the way of the craftsman's discipline and commitment: schools may fail to provide the tools to do good work, and workplaces may not truly value the aspiration for quality. And though craftsmanship can reward an individual with a sense of pride in work, this reward is not simple. The craftsman often faces conflicting objective standards of excellence; the desire to do something well for its own sake can be weakened by competitive pressure, by frustration, or by obsession.
