We argue that the ethical principles of justice provide an essential foundation for policies to protect unborn generations and the poorest countries from climate change. Related issues arise in connection with current and persistently inadequate aid for these nations, in the face of growing threats to agriculture and water supply, and the rules of international trade that mainly benefit rich countries. Increasing aid for the world's poorest peoples can be an essential part of effective mitigation. With 20 percent of carbon emissions from (mostly tropical) deforestation, carbon credits for forest preservation would combine aid to poorer countries with one of the most cost-effective forms of abatement. Perhaps the most cost-effective but politically complicated policy reform would be the removal of several hundred billions of dollars of direct annual subsidies from the two biggest recipients in the OECD — destructive industrial agriculture and fossil fuels. Even a small amount of this money would accelerate the already rapid rate of technical progress and investment in renewable energy in many areas, as well as encourage the essential switch to conservation agriculture.

- ① reforming diplomatic policies in poor countries
- ② increasing global awareness of the environmental crisis
- ③ reasons for restoring economic equality in poor countries
- ④ coping with climate change by reforming aid and policies
- ⑤ roles of the OECD in solving international conflicts

As far back as 32,000 years ago, prehistoric cave artists skillfully used modeling shadows to give their horses and bison volume. A few thousand years ago ancient Egyptian and then ancient Greek art presented human forms in shadow-style silhouette. But cast shadows do not appear in Western art until about 400 BCE in Athens. It was only after shadows had become an established, if controversial, part of representation that classical writers claimed that art itself had begun with the tracing of a human shadow. Greeks and Romans were the first to make the transition from modeling shadows to cast shadows, a practice that implied a consistent light source, a fixed point of view, and an understanding of geometric projection. In fact, what we might now call "shadow studies" — the exploration of shadows in their various artistic representations — has its roots in ancient Athens. Ever since, the practice of portraying shadows has evolved along with critical analysis of them, as artists and theoreticians have engaged in an ongoing debate about the significance of shadow representation.

Humans are so averse to feeling that they're being cheated ①that they often respond in ways that seemingly make little sense. Behavioral economists — the economists who actually study ②what people do as opposed to the kind who simply assume the human mind works like a calculator — have shown again and again that people reject unfair offers even if ③it costs them money to do so. The typical experiment uses a task called the ultimatum game. It's pretty straightforward. One person in a pair is given some money — say \$10. She then has the opportunity to offer some amount of it to her partner. The partner only has two options. He can take what's offered or ④refused to take anything. There's no room for negotiation; that's why it's called the ultimatum game. What typically happens? Many people offer an equal split to the partner, ⑤leaving both individuals happy and willing to trust each other in the future.

A serious deterioration in people's working lives would be deeply disturbing to the social order. Indeed, few consequences of technological change would be as dangerous. Today, the world of work is the main way that we share out the fruits of growth: for most people, their job is their main, if not their only, source of income. Technological unemployment would weaken that longstanding arrangement, encouraging an even more extreme version of inequality in which some people receive more income than others and many receive nothing at all. Nor would the disturbance be only economic. For many people, their work is both a source of income and of meaning. And with that in mind, the threat is even broader: not only that the labor market might be hollowed out, leaving some unable to find a good job and a reliable income, but that this sense of fulfilment that some people are fortunate to feel in their jobs might be hollowed out as well, leaving them unable to find purpose and live a satisfying life.

By creating unemployment, technology would upset the social order, affecting the ____ (A) ____ of wealth and possibly eliminating the emotional ____ (B) ____ that some discover in work.

글은 선사 시대 동굴 예술가들의 그림자 사용에서 시작하여 고대 이집트, 그리스, 로마를 거쳐 그림자 표현이 예술에서 어떻게 발전해왔는지를 시간 순서에 따라 서술하고 있다. 이처럼 '선사 시대 동굴부터 계속되는 예술 속 그림자의 여정'이라는 포괄적인 제목이 글 전체의 내용을 가장 잘 요약한다.

4. [정답] ④

④번 문장에서 'He can take what's offered or refused to take anything'은 등위접속사 'or'에 의해 두 개의 동사구가 병렬 구조를 이루어야 한다. 조동사 'can'에 이어지는 동사원형 'take'와 병렬을 이루어야 하므로, 'refused'는 동사원형인 'refuse'가 되어야 문법적으로 올바르다. ('can take ... or refuse ...')

본문은 기술 실업이 '성장의 과실을 나누는(share out the fruits of growth)' 주요 방식인 일자리를 없애 부의 불평등을 심화시킨다고 말한다. 이는 부의 (A)분배(distribution) 문제와 직결된다. 또한, 일이 단순한 소득원을 넘어 의미와 '성취감(sense of fulfilment)'의 원천인데, 이마저도 사라질 수 있다고 우려한다. 이 성취감은 일에서 얻는 정서적 (B)보상(rewards)으로 볼 수 있다. 따라서 요약문은 '기술이 부의 (A)분배에 영향을 미치고, 일에서 발견하는 정서적 (B)보상을 없앨 수 있다'는 내용이 되어야 한다.
